

Table of Contents

Chapter 1—Static Electric and Magnetic Fields in Vacuum	1
1.1 Static Charges	1
1.1.1 The electrostatic Force	2
1.1.2 The Electric Field	5
1.1.3 Gauss' Law	7
1.1.4 The Electric Potential	11
1.2 Moving Charges	13
1.2.1 The Continuity Equation	13
1.2.2 Magnetic Forces	14
1.2.3 The Law of Biot and Savart	16
1.2.4 Ampère's Law	19
1.2.5 The Magnetic Vector Potential	23
1.2.6 The Magnetic Scalar Potential	26
Exercises and problems	30
Chapter 2—Charge and Current Distributions	33
2.1 Multipole Moments	33
2.1.1 The Cartesian Multipole Expansion	35
2.1.2 The Spherical Polar Multipole expansion	40
2.2 Interactions with the Field	42
2.2.1 Electric Dipoles	43
2.2.2 Magnetic Dipoles	44
2.3 Potential Energy	45
Exercises and Problems	47
Chapter 3—Slowly Varying Fields in Vacuum	49
3.1 Magnetic Induction	49
3.1.1 Electromotive Force	49
3.1.2 Magnetically Induced Motional EMF	50
3.1.3 Time-Dependent Magnetic Fields	52
3.1.4 Faraday's Law	54
3.2 Displacement Current	54
3.3 Maxwell's Equations	57
3.4 The Potentials	58
3.4.1 The Lorentz Force and Canonical Momentum	59
3.4.2 Gauge Transformations	60
3.5 The Wave Equation in Vacuum	62
3.5.1 Plane Waves	63
3.5.2 Spherical waves	65

Exercises and Problems	67
Chapter 4—Energy and Momentum	69
4.1 Energy of a Charge Distribution	69
4.1.1 Stationary Charges	69
4.1.2 Coefficients of Potential	72
4.1.3 Forces on Charge Distributions	74
4.1.4 Potential Energy of Currents	76
4.2 Poynting's theorem	80
4.3 Momentum of the Fields	82
4.3.1 The Cartesian Maxwell Stress Tensor	82
4.3.2 The Maxwell Stress Tensor and Momentum	85
4.4 Magnetic Monopoles	88
4.5 Duality Transformations	89
Exercises and Problems	91
Chapter 5—Static Potentials in Vacuum – Laplace's Equation 93	
5.1 Laplace's equation	93
5.1.1 Uniqueness Theorem	94
5.1.2 $\nabla^2 V = 0$ in One Dimension	94
5.2 $\nabla^2 V = 0$ in Two Dimensions	95
5.2.1 Cartesian Coordinates in Two Dimensions	96
5.2.2 Plane Polar Coordinates	98
5.2.3 Spherical Polar Coordinates with Axial Symmetry	106
5.2.4 Conformal mappings	115
5.2.5 Schwarz - Christoffel Transformations	120
5.2.6 Capacitance	124
5.2.7 Numerical Solution	127
5.3 $\nabla^2 V = 0$ in Three dimensions	128
5.3.1 Cylindrical Polar Coordinates	128
5.3.2 Spherical Polar Coordinates	132
5.3.3 Oblate Ellipsoidal Coordinates	136
Exercises and Problems	139
Chapter 6—Static Potentials with Sources—Poisson's Equation 143	
6.1 Poisson's Equation	143
6.2 Image Charges	144
6.2.1 The Infinite Conducting Plane	144
6.2.2 The Conducting Sphere	146
6.2.3 Conducting Cylinder and Image Line Charges	149
6.3 Green's Functions	152
6.3.1 Green's Theorem	153
6.3.2 Poisson's Equation and Green's Theorem	154
6.3.3 Expansion of the Dirichlet Green's Function in Spherical Harmonics	155
6.3.4 Dirichlet Green's Function from Differential Equation	159
Exercises and Problems	163

Chapter 7—Static Electromagnetic Fields in Matter 165

7.1 The Electric Field Due to a Polarized Dielectric	165
7.1.1 Empirical Description of Dielectrics	168
7.1.2 Electric Displacement Field	169
7.2 Magnetic Induction Field Due to a Magnetized material	171
7.2.1 Magnetic Field Intensity	174
7.3 Microscopic Properties of Matter	175
7.3.1 Polar Molecules (Langevin-Debye Formula)	175
7.3.2 Nonpolar Molecules	176
7.3.3 Dense Media—The Clausius-Mosotti Equation	177
7.3.4 Crystalline Solids	178
7.3.5 Simple Model of Paramagnetics and Diamagnetics	179
7.3.6 Conduction	180
7.4 Boundary Conditions for the Static Fields	181
7.5 Electrostatics and Magnetostatics in Linear Media	185
7.5.1 Electrostatics with Dielectrics Using Image Charges	190
7.5.2 Image Charges for the Dielectric Cylinder	191
7.5.3 Magnetostatics and Magnetic Poles	194
7.5.4 Magnetic Image Poles	199
7.6 Conduction in Homogeneous Matter	201
7.7 Magnetic Circuits	202
7.7.1 Magnetic Circuits Containing a Permanent Magnet	204
7.7.2 The Hysteresis Curve of a Ferromagnet	205
Exercises and Problems	208

Chapter 8—Time Dependent Electric Fields in Matter 211

8.1 Maxwell's equations	211
8.1.1 Boundary Conditions for Oscillating Fields	213
8.1.2 Special cases	215
8.2 Energy and Momentum in The Fields	216
8.2.1 Energy of Electric and Magnetic Fields	217
8.2.2 Momentum and the Maxwell Stress Tensor	218
8.2.3 Blackbody Radiation Pressure	219
8.3 The Electromagnetic Potentials	221
8.4 Plane Waves in Material Media	222
8.4.1 Plane waves in Linear, Isotropic Dielectrics	223
8.4.2 Reflection and Refraction—Snell's Law	224
8.4.3 Fresnel's Equations	225
8.4.4 The Evanescent wave	229
8.4.5 Plane waves in a Tenuous Plasma	230
8.4.6 Plane Waves in Linear Anisotropic Dielectrics	231
8.4.7 Plane waves in Isotropic, Linear Conducting matter	235
8.4.8 Simple model for the Frequency Dependence of Dielectric Susceptibility	237
8.4.9 Simple Model of a Conductor in an Oscillating Field	238

Exercises and Problems	241
Chapter 9—Waveguide Propagation – Bounded waves	243
9.1 Bounded Waves	243
9.1.1 TE Modes in a Rectangular Waveguide	243
9.2 Cylindrical Waveguides	246
9.2.1 Circular Cylindrical Waveguides	251
9.2.2 Resonant Cavities	253
9.2.3 Dissipation by Eddy Currents	255
9.3 Dielectric Waveguides (Optical Fibers).....	259
9.3.1 HE Modes	262
Exercises and Problems	266
Chapter 10—Electromagnetic Radiation	269
10.1 The Inhomogeneous Wave Equation	269
10.1.1 Solution by Fourier Analysis	270
10.1.2 Green’s Function for the Inhomogeneous Wave Equation	273
10.2 Radiation from a Localized Oscillating Source	274
10.2.1 Electric Dipole Radiation	276
10.2.2 Magnetic Dipole and Electric Quadrupole Radiation	281
10.2.3 Radiation by Higher Order Moments	286
10.2.4 Energy and Angular Momentum of the Multipole Fields	289
10.2.5 Radiation from Extended Sources	292
10.3 The Liénard-Wiechert Potentials	294
10.3.1 The Liénard-Wiechert Potentials Using Green’s Functions	295
10.3.2 The Fields Of a Moving Charge	296
10.3.3 Radiation from Slowly Moving Charges	297
10.3.4 Thompson Scattering	298
10.3.5 Radiation by Relativistic Charges	300
10.3.6 Synchrotron Radiation	303
10.3.7 Bremstrahlung and Cherenkov radiation	304
10.4 Differentiating the Potentials	305
Exercises and Problems	310
Chapter 11—The Covariant Formulation	313
11.0 Covariance	313
11.1 The Four-Potential and Coulomb’s Law	314
11.2 The Electromagnetic Field Tensor	316
11.2.1 Magnetization and Polarization	318
11.3 Invariants	319
11.4 The Stress-Energy-Momentum Tensor	320
11.5 Radiation from Relativistic Particles	325
Exercises and Problems	328
Chapter 12—Radiation Reaction – Electrodynamics	331
12.1 Electromagnetic Inertia	331

12.2 The Reaction Force Needed to Conserve energy	333
12.3 Direct Calculation of Radiation Reaction – The Abraham-Lorentz Model	335
12.4 The Equation of Motion	338
12.5 The Covariant equation of Motion	339
12.6 Alternative Formulations	340
Exercises and Problems	342
Appendix A—Other systems of Units	343
A.1 EMU and ESU Systems	344
A.2 Gaussian Units	345
Appendix B—Vectors and Tensors	347
B.1 Vectors	347
B.1.1 Bases and Transformations	348
B.1.2 Transformation of Basis Vectors	349
B.1.3 Scalar and Vector Products	350
B.1.4 Reciprocal Bases	350
B.1.5 The Summation Convention	351
B.1.6 Covariant and Contravariant Components of a Vector	352
B.1.7 The Metric Tensor	352
B.2 Tensors	353
B.2.1 Zero Rank Tensors	353
B.2.2 First-Rank Tensors	354
B.2.3 Second-Rank tensors	355
B.2.4 Differentiation of Tensors	356
B.2.5 Pseudotensors	357
B.3 Vector Identities	358
B.4 Curvilinear Coordinates	360
B.4.1 Bases and Coordinate Axes	360
B.4.2 Differentiation of Tensors in Curvilinear Coordinates	362
B.4.3 Differential Operators	364
B.5 Four-Tensors in Special Relativity	369
Exercises and problems	372
Appendix C—The Dirac Delta Function	373
C.1 The Dirac Delta Function	373
Appendix D—Orthogonal Function Expansions	377
D.1 Orthogonal Functions	377
D.1.1 Expansion of Functions in Terms of an Orthogonal Set	378
Appendix E—Bessel Functions	383
E.1 Properties of Bessel Functions	383
E.1.1 Differential Equation	383
E.1.2 Asymptotic Values	384
E.1.3 Integral Forms	385

E.1.4	Explicit Forms	385
E.1.5	Recursion Relations	385
E.1.6	Generating Function and Associated series	385
E.1.7	Addition Theorem	386
E.1.8	Orthogonality	386
E.1.9	Completeness	386
E.1.10	Roots	386
E.2	Related Functions	387
E.2.1	Hankel Functions	387
E.2.2	Modified Bessel Functions	387
E.2.3	Spherical Bessel Functions	388
E.3	Solution of Bessel's Equation	388
E.3.1	The Second Solution	390
E.3.2	Derivation of the Generating Function	391
E.3.3	Spherical Bessel Functions	392

Appendix F—Legendre Polynomials and Spherical Harmonics 393

F.1	Legendre Functions	393
F.1.1	Differential Equation	393
F.1.2	Some Values	394
F.1.3	Explicit Forms	394
F.1.4	Recursion Relations	395
F.1.5	Generating Function	395
F.1.6	Orthogonality	396
F.2	Spherical Harmonics	396
F.2.1	Values and relations	396
F.2.2	Explicit Forms	396
F.2.3	Orthogonality	396
F.2.4	Completeness	397
F.2.5	Addition Theorem	397
F.3	Solution of the Legendre Equation	397
F.3.1	Derivation of the Generating Function	399
F.3.2	Associated Legendre Functions	401

Appendix G—Table of Symbols 403
