

Clifford Algebras and Spinors

Perti Lounesto
Helsinki Institute of Technology

CAMBRIDGE
UNIVERSITY PRESS

Contents

Preface	vii
1. Vectors and linear spaces	1
2. Complex numbers	18
3. Bivectors and the exterior algebra	33
4. Pauli spin matrices and spinors	50
5. Quaternions	67
6. The fourth dimension	80
7. The cross product	92
8. Electromagnetism	100
9. Lorentz transformations	118
10. The Dirac equation	135
11. Fierz identities and boomerangs	152
12. Flags, poles and dipoles	162
13. Tilt to the opposite metric	174
14. Definitions of the Clifford algebra	188
15. Witt rings and Brauer groups	195
16. Matrix representations and periodicity of 8	205
17. Spin groups and spinor spaces	219
18. Scalar products of spinors and the chessboard	231
19. Möbius transformations and Vahlen matrices	244
20. Hypercomplex analysis	255
21. Binary index sets and Walsh functions	279
22. Chevalley's construction and characteristic 2	288
Selected reading	300
Index	304
