WILEY

Table of Contents

PART 1. MODELS AND TOOLS 1

Chapter 1. Model Use: From a Decision-Making Problem to a Set of Research Problems 3
Philippe KISLIN

1.1. Introduction: why model? 3
1.2. General presentation of the Watcher Information Search Problem model 5
1.3. Dimensions and aspects of the model 6
1.4. Description of model elements 9
1.4.1. Elements describing the decision problem and its context 9
1.4.2. Chosen solutions and the final decision 12
1.4.3. Supporting elements of the information problem 13
1.4.4. Demand, stakes, and context 13
1.4.5. Information indicators 16
1.4.6. Elements of research problems 18
1.4.7. Analysis and presentation of results 21
1.4.8. Common parameters for all model elements 21
1.4.9. Knowledge building through annotation 22
1.5. Conclusion: toward flexibility in the model 23
1.6. Bibliography 24

Chapter 2. Analytical Tools for Competitive Intelligence: from Data Collection to Data Processing 25
Ilhème GHALAMALLAH, Eloïse LOUBIER and Bernard DOUSSET

2.1. Introduction 25
2.2. Overview of the multidimensional analysis model 28
2.2.1. Information process 29

2.2.2. Process architecture 30
2.3. Application of the multidimensional analysis model 31
2.3.1. Preliminary data. 32
2.3.2. Data visualization. 37
2.4. Conclusion 41
2.5. Bibliography 42

Chapter 3. The Synergy of Knowledge Management and Competitive Intelligence 45
Bolanle OLADEJO and Adenike O. OSOFISAN

3.1. Introduction. 45
3.2. Theoretical context 46
3.2.1. Definitions of knowledge 46
3.2.2. Competitive intelligence. 47
3.2.3. KM in CI 49
3.3. Knowledge acquisition strategy. 59
3.3.1. Action-based knowledge acquisition 59
3.4. Formalization of knowledge 59
3.4.1. KC structure for CI projects. 60
3.4.2. Architecture for KM in CI projects 61
3.5. Conclusion 63
3.6. Appendices 64
3.6.1. Appendix A: knowledge acquisition based on actor activities . . . 64
3.6.2. Appendix B: capitalization scenario in decision making. 64
3.7. Bibliography 65

Chapter 4. Collaborative Information Seeking in the Competitive Intelligence Process 69
Victor ODUMUYIWA

4.1. Introduction. 69
4.2. The CI process 70
4.3. From information retrieval to CIR 71
4.3.1. Information retrieval 71
4.3.2. Collaborative information behavior 73
4.3.3. CIS and retrieval 75
4.4. Facilitation and management of CIS 78
4.4.1. The conceptual framework 78
4.4.2. Communication model for CIS. 81
4.4.3. Application context. 84
4.5. Collective information seeking scenario. 86
4.6. Conclusion 88
4.7. Bibliography 89

Chapter 5. Study of Risk Factors in Competitive Intelligence Decision Making: A Cognitive Approach 93
Olufade F.W. ONIFADE, Odile THIERY, Adenike O. OSOFISAN and Gérald DUFFING

5.1. Decision making and decision problems. 93
5.1.1. Introduction 93
5.1.2. Fundamental aspects of the decision problem 94
5.1.3. Decision and cognitive capacity 96
5.1.4. Decisions in the context of CI 98
5.2. Risks and RFs in CI 100
5.2.1. Introduction 100
5.2.2. Actors and their interactions in CI 101
5.2.3. Risks and RFs 102
5.3. Cognitive capacity, a risk, and decision factor 105
5.3.1. Introduction 105
5.3.2. Cognitive capacity and its effects on decision making 105
5.3.3. Cognitive model of RFs 107
5.4. Conclusion 109
5.5. Bibliography 110

Chapter 6. Multimedia Information Seeking Through Competitive Intelligence Process 113
Hanène MAGHREBI

6.1. Introduction. 113
6.2. The two dimensions of CI: decisions and information 114
6.3. Multimedia information: between complexity and accessibility. 116
6.4. The information seeking process: an overview of paradigmatic evolution. 116
6.5. Actors involved in information seeking processes and problem solving 117
6.5.1. Terminology: the notion of the user 118
6.5.2. Terminology: the notion of use. 119
6.6. Applying a user-centered approach to facilitate multimedia information seeking. 120
6.6.1. Multimedia information granulation to support multimedia information seeking processes 122
6.6.2. Integration of the representation of the user into the multimedia information retrieval process. 124
6.7. Conclusion 132
6.8. Bibliography 133

Chapter 7. Strategies for Analyzing Chinese Information Sources from a Competitive Intelligence Perspective 135
Nadège GUENEC

7.1. Introduction. 135
7.2. Chinese scientific information as an essential source of information. 137
7.3. A global vision of the sector through patent analysis 141
7.4. Chinese sources of scientific information 145
7.5. Automatic processing of information by bibliometrical analysis of metadata. 149
7.5.1. Specificities of a Chinese-language corpus. 149
7.5.2. Analysis and results 153
7.5.3. Validation and comparison 155
7.6. Conclusion 155
7.7. Bibliography 157

Chapter 8. Generic Tagging Strategy Using a Semio-Contextual Approach to the Corpus for the Creation of Controlled Databases 159
Lise VERLAET

8.1. Introduction. 159
8.2. The adaptive journal concept 160
8.2.1. The notion of semantic tagging: selection of relevant information 161
8.2.2. Modeling knowledge: organizing relevant information 162
8.2.3. Recomposed documents: sorting and presenting relevant information 163
8.3. A generic tagging strategy: models using the ASCC 165
8.3.1. Categorizing meaning 166
8.3.2. The ASCC at the nano-level of information in an adaptive journal 168
8.3.3. ASCC at micro-level in an adaptive journal 170
8.3.4. ASCC for authors in an adaptive journal 173
8.3.5. ASCC at meso-level in an adaptive journal 176
8.3.6. ASCC at macro-level in an adaptive journal 178
8.4. Conclusion 179
8.5. Bibliography 181

Chapter 9. Design and Development of a Model for Generating and Exploiting Annotation in the Context of Economic Intelligence 183
Olusoji B. OKUNOYE and Charles O. UWADIA

9.1. Introduction. 183
9.2. Annotation as a concept 184

9.3. Annotation in EI 185
9.3.1. Annotation for knowledge elicitation 185
9.3.2. Annotation in information retrieval 186
9.3.3. Annotation as value-added information 186
9.3.4. Requirements for annotation model 187
9.4. Proposition 189
9.4.1. Annotation creation 190
9.4.2. Annotation exploitation 191
9.5. Annotation model and architectural components 192
9.5.1. Annotation schema 193
9.5.2. AMTEA architecture 194
9.6. Bibliography 196

Chapter 10. Contribution of Cognitive Sciences to Document Indexing in Scientific, Technical, and Economic Watch for Competitive Intelligence 199
Elisabeth PAOLI-SCARBONCHI and Nadège GUENEC

10.1. Introduction 199
10.2. Functionality of the PIETRA platform: general presentation 201
10.3. Global usage strategy 202
10.4. Operation of the platform 202
10.4.1. Watch profiles 203
10.4.2. The pivot language 204
10.4.3. Memory indexing 206
10.4.4. Validation 207
10.5. Elaborated databases 219
10.6. Conclusion 219
10.7. Bibliography 220

PART 2. CI AND GOVERNANCE 223

Chapter 11. Integration of Competitive Intelligence and Watch in an Academic Scientific Research Laboratory 225
Jacky KISTER and Henri DOU

11.1. Introduction 225
11.2. Existing structures in universities and research organizations 226
11.3. Research structures, research actors and evaluation in the context of CI integration 228
11.4. Clusters and their power of attraction 231
11.5. Strategic analysis units, a support for the development of laboratories and of CI 233
11.5.1. GICC UMR 234

11.5.2. The LSCC: strategic intelligence survey unit 235
11.6. Conclusion 241
11.7. Bibliography 242

Chapter 12. E-Health and Societal and Territorial Intelligence in France: Collective Knowledge Production Issues and New Network Interface Organizations 247
Christian BOURRET

12.1. Introduction 247
12.2. E-health, the convergence of health issues, and ICT 248
12.2.1. Compartmentalization and crisis in health systems 248
12.2.2. The development of e-health 249
12.2.3. Evolution of medical practice, computerization, and ICT use . . . 250
12.3. Toward a new territorialization of healthcare management 251
12.3.1. Reorganization of the health system by regionalization 251
12.3.2. Affirmation of new organizations of innovative interfaces as sociotechnical forms, projects, and apparatus 252
12.4. E-health and CI: societal dimensions and territorial intelligence. . . . 254
12.4.1. E-health and CI 254
12.4.2. The convergence of societal and territorial intelligence: a global intelligence approach to complexity 256
12.5. Issues in the production of collective knowledge. 257
12.5.1. Coordination: the complementarity of information and communication 257
12.5.2. Information needs for decision assistance and new tools. 258
12.5.3. Evolution of professions and new professions 260
12.6. Shared information systems at regional level: a step toward societal and territorial information systems with a health component? . . . 261
12.6.1. Issues in the construction of regionalized information systems. 261
12.6.2. Societal and territorial intelligence and building trust between actors around sociotechnical systems 262
12.6.3. Collective knowledge production: the core of new governance in the health system 263
12.7. Conclusion 263
12.8. Bibliography 264

Chapter 13. Governance and Short-Term Product Development in Clusters – An Example: The FIRE Application 269
Henri DOU

13.1. Introduction 269
13.2. Considerations on the development of clusters 270

13.3. Grievances of small businesses and industries 271
13.4. The context of the SCS cluster, PACA, France 273
13.5. Origins of the FIRE project. 274
13.5.1. From idea to creation 275
13.5.2. Industrial aims of the project 275
13.6. From design to creation and commercialization 276
13.6.1. General event sequence from an idea to a commercial product 276
13.7. Conclusion 277
13.8. Bibliography 278

Chapter 14. Competitive Intelligence and the Development of Corporate Universities 281
Cláudia CAMELO, Miguel Rombert TRIGO, Luc QUONIAM and João Casqueira CARDOSO

14.1. Introduction 281
14.2. Competitive intelligence 282
14.3. Corporate universities 286
14.4. The role of CI in the creation of corporate universities 290
14.5. Corporate universities and potential domains of action 291
14.6. Integrated CI services in corporate universities 293
14.7. Conclusion 296
14.8. Bibliography 296

Chapter 15. Emerging Functions for Driving Competitive Intelligence at Regional Level 299
Audrey KNAUF

15.1. Regional systems for CI. 300
15.1.1. History 301
15.1.2. Definition of regional systems for CI 303
15.1.3. System actors 304
15.2. Competitiveness clusters 305
15.2.1. What is a cluster? 306
15.2.2. The contribution of CI to clusters. 306
15.2.3. Evaluation of centers 308
15.2.4. Review of the first phase of cluster support: 2006–2008 309
15.2.5. Launch of the second phase of cluster support: 2009–2011 310
15.3. Survey of CI systems 310
15.3.1. Results of the survey 312
15.3.2. Comments 312
15.4. The role of coordinator 315
15.4.1. Roles and activities of the coordinator. 315

15.4.2. Competences of the coordinator 320
15.5. Conclusion 323
15.6. Bibliography 324

Chapter 16. Attractiveness of Territories and Territorial Intelligence: Indicators 327
Nathalie FABRY and Sylvain ZEGHNI

16.1. Introduction 327
16.2. Attractiveness and value of a territory: elements of analysis 328
16.2.1. Attractiveness of territories: creating and harnessing value 329
16.2.2. TI and attractiveness: measuring the value of a territory 331
16.3. Attractiveness and implementation of a TI approach. 333
16.3.1. Territorial attractiveness: comparison of studies on the IDF region. 333
16.3.2. The participatory method 336
16.3.3. Information and attractiveness 338
16.4. Conclusion 340
16.5. Bibliography 340
16.6. Appendix A: grid for territorial analysis by aspect 343

List of Authors 345
