

COMPUTATIONAL METHODS FOR MULTIPHASE FLOW

Edited by

ANDREA PROSPERETTI AND GRÉTAR TRYGGVASON

**CAMBRIDGE
UNIVERSITY PRESS**

Contents

Preface	<i>page</i> vii
Acknowledgments	x
1 Introduction: A computational approach to multiphase flow A. Prosperetti and G. Tryggvason	1
2 Direct numerical simulations of finite Reynolds number flows G. Tryggvason and S. Balachandar	19
3 Immersed boundary methods for fluid interfaces G. Tryggvason, M. Sussman and M.Y. Hussaini	37
4 Structured grid methods for solid particles S. Balachandar	78
5 Finite element methods for particulate flows H. Hu	113
6 Lattice Boltzmann models for multiphase flows S. Chen, X. He and L.-S. Luo	157
7 Boundary integral methods for Stokes flows J. Blawdziewicz	193
8 Averaged equations for multiphase flow A. Prosperetti	237
9 Point-particle methods for disperse flows K. Squires	282
10 Segregated methods for two-fluid models A. Prosperetti, S. Sundaresan, S. Pannala and D.Z. Zhang	320
11 Coupled methods for multifluid models A. Prosperetti	386
