Connectionist Robot Motion Planning

A Neurally-Inspired Approach to Visually-Guided Reaching

Contents

Preface xiii

Acknowledgements xv

1 Introduction 1

2 MURPHY's Organization 7
The Physical Setup 7
The Connectionist Architecture 9
Representational Choices 12
MURPHY's Kinematics 16
Traditional Methods 16
Connectionist Kinematics 19
The Sequential Controller 22

3 How MURPHY Learns 23
Learning by Doing 23
Abridged History of the Idea 26
Motivating Sigma-Pi Learning 28
Connectionist Supervised Associative Learning 28
A Historical Quandary 30
New Algorithms Are More Powerful, Less Biological . 32
Changing Assumptions 34
Learning Functions with Lookup-Tables 35
Building Receptive Fields with Multiplication 39
Sigma-Pi Learning 41
The Sigma-Pi Unit 41

The Learning Rule 43
An Example 44
Generalization to Novel Inputs 47
K-d Tree Reimplementation 48

4 MURPHY in Action **51**
Planning with Gradient Descent 51
Motion Planning with Obstacles 53
Four Visual Routines 53
The Search Procedure 54
Discussion 64
Visual-Feedback Control 65
System Performance and Scaling Behavior 69
Implementation and Performance Notes 69
Scaling MURPHY Up 70

5 Robotics Issues **77**
Learning vs. Built-in Models 77
Style of Representation 78
Using the Full Visual Channel 78
Styles of Robot Motion Planning 82
Artificial Potential Fields: Local Methods 82
Geometric Motion Planning: Global Methods 83
Hybrid Methods: Incorporating Heuristic Search . . . 87
MURPHY Uses Direct Heuristic Search 90

6 Psychological Issues **93**
Psychoanalyzing MURPHY 94
Development and Plasticity in Limb Control 95
The Necessity of Active Sensory-Motor Learning . . . 95
Developmental Evidence for Two Modes of Control . . 96
Possible Evidence for Local Learning 98
Models, Imagery, Practice, and Stability 100
Building and Using Mental Models 100
Mental Imagery 102
Mental Practice: Learning by Thinking 108
Corollary Discharges and Perceptual Stability 112
Summary of Psychological Issues 114

7 Biological Issues **117**
The Muscle Interface 117
A Cortical Basis for Visual Limb Control 121
A Programmed-Feedforward Neural Subsystem 124
A Visual-Feedback Neural Subsystem 132
Summary of Biological Issues 136

8 Conclusions **139**
Scientific and Engineering Lessons Learned 139
Learning by Doing 139
Learning with Lookup-Tables 140
The Connectionist Architecture 142
Mental Models, Heuristic Search 143
Reflections on Brain and Behavior 143
Future Directions 144
Pragmatic Extensions 144
Theoretical Extensions 145

Bibliography **149**

Index **163**
