Connes–Landi Deformation of Spectral Triples

Makoto Yamashita

Cardiff University, School of Mathematics

EU-NCG 4th Annual Meeting Bucharest 2011

Based on:
M. Yamashita. Connes–Landi deformation of spectral triples, *Lett. Math. Phys.* **94**(3):263–291, 2010

1. θ-deformation of spectral triples
2. Cyclic cohomology of one-parameter crossed product
3. Cyclic cohomology of Connes-Landi deformation

Connes-Landi deformation

$\mathcal{A}$: Fréchet, $\sigma\colon \mathbb{T}^2 \curvearrowright \mathcal{A}$ smooth

Connes-Landi deformation

$\mathcal{A}$: Fréchet, $\sigma\colon \mathbb{T}^2 \curvearrowright \mathcal{A}$ smooth
$\theta\mathbb{R}/\mathbb{Z}$: deformed product $*_\theta$ on $\mathcal{A}$

$$f *_\theta g = e^{\pi i \theta (mn' - m'n)} fg$$

when f is a $\mathbb{T}^2$-eigenvector of weight $(m, n) \in \mathbb{Z}^2$, g is a one of weight (m', n').

$$\mathcal{A}_\theta = (\mathcal{A}, *_\theta)$$

Connes-Landi deformation

$\mathcal{A}$: Fréchet, $\sigma\colon \mathbb{T}^2 \curvearrowright \mathcal{A}$ smooth
$\theta\mathbb{R}/\mathbb{Z}$: deformed product $*_\theta$ on $\mathcal{A}$

$$f *_\theta g = e^{\pi i \theta (mn' - m'n)} fg$$

when f is a $\mathbb{T}^2$-eigenvector of weight $(m, n) \in \mathbb{Z}^2$, g is a one of weight (m', n').

$$\mathcal{A}_\theta = (\mathcal{A}, *_\theta)$$

$A_\theta = \overline{\mathcal{A}_\theta}$: deformation of $A = \overline{\mathcal{A}}$ by Rieffel (1993)

CL-deformation of spectral triples

$(\mathcal{A}, H, D)$ spectral triple, $U \colon \mathbb{T}^2 \curvearrowright H$

$$\sigma_t(a) = \mathrm{Ad}_{U_t}(a), \qquad \mathrm{Ad}_{U_t}(D) = D$$

CL-deformation of spectral triples

$(\mathcal{A}, H, D)$ spectral triple, $U\colon \mathbb{T}^2 \curvearrowright H$

$$\sigma_t(a) = \mathrm{Ad}_{U_t}(a), \qquad \mathrm{Ad}_{U_t}(D) = D$$

$$\Rightarrow \exists \mathcal{A}_\theta \curvearrowright H, \quad a^{(\theta)}\xi = e^{\pi i \theta (mn' - m'n)} a\xi$$

when $a \in \mathcal{A}$ is a $\mathbb{T}^2$-eigenvector of weight (m, n) and $\xi \in H$ is a one of weight (m', n')

CL-deformation of spectral triples

$(\mathcal{A}, H, D)$ spectral triple, $U \colon \mathbb{T}^2 \curvearrowright H$

$$\sigma_t(a) = \mathrm{Ad}_{U_t}(a), \qquad \mathrm{Ad}_{U_t}(D) = D$$

$$\Rightarrow \exists \mathcal{A}_\theta \curvearrowright H, \quad a^{(\theta)}\xi = e^{\pi i \theta (mn' - m'n)} a\xi$$

when $a \in \mathcal{A}$ is a $\mathbb{T}^2$-eigenvector of weight (m, n) and $\xi \in H$ is a one of weight (m', n')

$\Rightarrow$ New spectral triple $(\mathcal{A}_\theta, H, D)$

Crossed product presentation of CL-deformation

Strong Morita equivalence

$$A_\theta \simeq (A \otimes C(\mathbb{T}^2_\theta))^{\sigma \otimes \gamma} \simeq_{\mathrm{KK}} \mathbb{T}^2 \ltimes_{\sigma \otimes \gamma} (A \otimes C(\mathbb{T}^2_\theta))$$

Crossed product presentation of CL-deformation

Strong Morita equivalence

$$A_\theta \simeq (A \otimes C(\mathbb{T}^2_\theta))^{\sigma\otimes\gamma} \simeq_{\mathrm{KK}} \mathbb{T}^2 \ltimes_{\sigma\otimes\gamma} (A \otimes C(\mathbb{T}^2_\theta))$$

Automorphisms of $\mathbb{Z} \ltimes_{\widehat{\sigma^{(2)}}} \mathbb{T}^2 \ltimes_\sigma A$:

$$\widehat{\sigma^{(1)}}\Big(\sum_{k\in\mathbb{Z}} f_k v^k\Big) = \sum_{k\in\mathbb{Z}} \widehat{\sigma^{(1)}}(f_k) v^k,$$

Crossed product presentation of CL-deformation

Strong Morita equivalence

$$A_\theta \simeq (A \otimes C(\mathbb{T}^2_\theta))^{\sigma \otimes \gamma} \simeq_{\mathrm{KK}} \mathbb{T}^2 \ltimes_{\sigma \otimes \gamma} (A \otimes C(\mathbb{T}^2_\theta))$$

Automorphisms of $\mathbb{Z} \ltimes_{\widehat{\sigma^{(2)}}} \mathbb{T}^2 \ltimes_\sigma A$:

$$\widehat{\sigma^{(1)}}(\sum_{k \in \mathbb{Z}} f_k v^k) = \sum_{k \in \mathbb{Z}} \widehat{\sigma^{(1)}}(f_k) v^k,$$

$\mathbb{R} \ltimes_{\sigma^{(1)}} A$ is identified with the mapping torus of $\widehat{\sigma^{(1)}} \colon \mathbb{Z} \curvearrowright \mathbb{T} \ltimes_{\sigma^{(1)}} A$

Crossed product presentation of CL-deformation

Strong Morita equivalence

$$A_\theta \simeq (A \otimes C(\mathbb{T}^2_\theta))^{\sigma\otimes\gamma} \simeq_{\mathrm{KK}} \mathbb{T}^2 \ltimes_{\sigma\otimes\gamma} (A \otimes C(\mathbb{T}^2_\theta))$$

Automorphisms of $\mathbb{Z} \ltimes_{\widehat{\sigma^{(2)}}} \mathbb{T}^2 \ltimes_\sigma A$:

$$\widehat{\sigma^{(1)}}(\sum_{k\in\mathbb{Z}} f_k v^k) = \sum_{k\in\mathbb{Z}} \widehat{\sigma^{(1)}}(f_k) v^k,$$

$\mathbb{R} \ltimes_{\sigma^{(1)}} A$ is identified with the mapping torus of $\widehat{\sigma^{(1)}} \colon \mathbb{Z} \curvearrowright \mathbb{T} \ltimes_{\sigma^{(1)}} A$

$$\Rightarrow \mathbb{Z} \ltimes_{\sigma^{(2)}_\theta \widehat{\sigma^{(1)}}} \mathbb{T} \ltimes_{\sigma^{(1)}} A \simeq_{\mathrm{KK}} \mathbb{R} \ltimes_{\sigma^{(2)}_{\theta t} \widehat{\sigma^{(1)}}} \mathbb{R} \ltimes_{\sigma^{(1)}} A$$

an analogue of "noncommutative torus" $\Leftrightarrow$ "Kronecker foliation"

Cyclic cocycles

Differential graded algebra (Ω^*, d), homomorphism $\mathcal{A} \to \Omega^0$

Cyclic cocycles

Differential graded algebra (Ω^*, d), homomorphism $\mathcal{A} \to \Omega^0$

$$\text{cyclic } n\text{-cocycle} \leftrightarrow \text{closed trace on } \Omega^n$$

$$\phi(f^0, \ldots, f^n) = \tau_\phi(f^0 df^1 \cdots df^n)$$

Cyclic cocycles

Differential graded algebra (Ω^*, d), homomorphism $\mathcal{A} \to \Omega^0$

$$\text{cyclic } n\text{-cocycle} \leftrightarrow \text{closed trace on } \Omega^n$$

$$\phi(f^0, \ldots, f^n) = \tau_\phi(f^0 df^1 \cdots df^n)$$

Cyclic cohomology group:
$\mathrm{HC}^n(\mathcal{A}) = \{\text{cyclic } n\text{-cocycles}\} / \{\text{cyclic } n\text{-coboundary}\}$

Cyclic cocycles

Differential graded algebra (Ω^*, d), homomorphism $\mathcal{A} \to \Omega^0$

$$\text{cyclic } n\text{-cocycle} \leftrightarrow \text{closed trace on } \Omega^n$$

$$\phi(f^0, \ldots, f^n) = \tau_\phi(f^0 df^1 \cdots df^n)$$

Cyclic cohomology group:
$\mathrm{HC}^n(\mathcal{A}) = \{\text{cyclic } n\text{-cocycles}\} / \{\text{cyclic } n\text{-coboundary}\}$

$$\mathrm{HC}^n(\mathcal{A}) \times K_n(\mathcal{A}) \to \mathbb{C},$$

$$\langle [\phi], [e] \rangle = \phi(e, \ldots, e) \quad (\phi : \text{cyclic } 2k\text{-cocycle}, e : \text{projection})$$
$$\langle [\phi], [u] \rangle = \phi(u^*, u, u^*, \ldots, u) \quad (\phi : \text{cyclic } 2k+1\text{-cocycle}, u : \text{unitary})$$

Cyclic cocycles

Differential graded algebra (Ω^*, d), homomorphism $\mathcal{A} \to \Omega^0$

$$\text{cyclic } n\text{-cocycle} \leftrightarrow \text{closed trace on } \Omega^n$$

$$\phi(f^0, \dots, f^n) = \tau_\phi(f^0 df^1 \cdots df^n)$$

Cyclic cohomology group:
$\mathrm{HC}^n(\mathcal{A}) = \{\text{cyclic } n\text{-cocycles}\} / \{\text{cyclic } n\text{-coboundary}\}$

$$\mathrm{HC}^n(\mathcal{A}) \times K_n(\mathcal{A}) \to \mathbb{C},$$

$$\langle [\phi], [e] \rangle = \phi(e, \dots, e) \quad (\phi : \text{cyclic } 2k\text{-cocycle}, e : \text{projection})$$
$$\langle [\phi], [u] \rangle = \phi(u^*, u, u^*, \dots, u) \quad (\phi : \text{cyclic } 2k+1\text{-cocycle}, u : \text{unitary})$$

$$S : \mathrm{HC}^n(\mathcal{A}) \to \mathrm{HC}^{n+2}(\mathcal{A}), \mathrm{HP}^*(\mathcal{A}) = \lim_{k\to\infty} \mathrm{HC}^{2k+*}(\mathcal{A})$$

Connes-Thom isomorphism in cyclic cohomology

Theorem (Elliott-Natsume-Nest, 1988)

$\mathcal{A}$: *Fréchet,* $\alpha\colon \mathbb{R} \curvearrowright \mathcal{A}$ *smooth*

Connes-Thom isomorphism in cyclic cohomology

Theorem (Elliott-Natsume-Nest, 1988)

$\mathcal{A}$: Fréchet, $\alpha \colon \mathbb{R} \curvearrowright \mathcal{A}$ smooth
$\Phi\colon K_*(\overline{\mathcal{A}}) \to K_{*+1}(\mathbb{R} \ltimes_\alpha \overline{\mathcal{A}})$ the Connes–Thom isomorphism

Connes-Thom isomorphism in cyclic cohomology

Theorem (Elliott-Natsume-Nest, 1988)

$\mathcal{A}$: Fréchet, $\alpha\colon \mathbb{R} \curvearrowright \mathcal{A}$ smooth
$\Phi\colon K_*(\overline{\mathcal{A}}) \to K_{*+1}(\mathbb{R} \ltimes_\alpha \overline{\mathcal{A}})$ the Connes–Thom isomorphism

$$\#_\alpha\colon \mathrm{HC}^n(\mathcal{A}) \to \mathrm{HC}^{n+1}(\mathbb{R} \ltimes_\alpha^\infty \mathcal{A})$$

$$\langle \phi, x \rangle = \langle \#_\alpha(\phi), \Phi(x) \rangle$$

Connes-Thom isomorphism in cyclic cohomology

Theorem (Elliott-Natsume-Nest, 1988)

$\mathcal{A}$: Fréchet, $\alpha\colon \mathbb{R} \curvearrowright \mathcal{A}$ smooth
$\Phi\colon K_*(\overline{\mathcal{A}}) \to K_{*+1}(\mathbb{R} \ltimes_\alpha \overline{\mathcal{A}})$ the Connes–Thom isomorphism

$$\#_\alpha\colon \mathrm{HC}^n(\mathcal{A}) \to \mathrm{HC}^{n+1}(\mathbb{R} \ltimes_\alpha^\infty \mathcal{A})$$

$$\langle \phi, x \rangle = \langle \#_\alpha(\phi), \Phi(x) \rangle$$

Example

τ: trace on $\mathcal{A}$, invariant under α
$i_X \tau(a, b) = \tau(ah(b))$: cyclic 1-cocycle on $\mathcal{A}$

Connes-Thom isomorphism in cyclic cohomology

Theorem (Elliott-Natsume-Nest, 1988)

$\mathcal{A}$: Fréchet, $\alpha\colon \mathbb{R} \curvearrowright \mathcal{A}$ smooth
$\Phi\colon K_*(\overline{\mathcal{A}}) \to K_{*+1}(\mathbb{R} \ltimes_\alpha \overline{\mathcal{A}})$ the Connes–Thom isomorphism

$$\#_\alpha\colon \mathrm{HC}^n(\mathcal{A}) \to \mathrm{HC}^{n+1}(\mathbb{R} \ltimes_\alpha^\infty \mathcal{A})$$

$$\langle \phi, x \rangle = \langle \#_\alpha(\phi), \Phi(x) \rangle$$

Example

τ: trace on $\mathcal{A}$, invariant under α
$i_X\tau(a, b) = \tau(ah(b))$: cyclic 1-cocycle on $\mathcal{A}$

$$\Rightarrow \#_{\hat{\alpha}}(\hat{\tau}) = \mathrm{Tr} \otimes i_X\tau \text{ on } \mathbb{R} \ltimes_{\hat{\alpha}}^\infty \mathbb{R} \ltimes_\alpha^\infty \mathcal{A} \simeq \mathcal{K}^\infty \hat{\otimes} \mathcal{A}$$

Invariant cocycles

$\mathcal{A}$: Fréchet, $\alpha \colon \mathbb{R} \curvearrowright \mathcal{A}$ smooth
X: generator of α
ϕ: cyclic n-cocycle on $\mathcal{A}$, invariant under α

Invariant cocycles

$\mathcal{A}$: Fréchet, $\alpha\colon \mathbb{R} \curvearrowright \mathcal{A}$ smooth
X: generator of α
ϕ: cyclic n-cocycle on $\mathcal{A}$, invariant under α

- Dual cocycle $\hat{\phi}$ on $\mathbb{R} \ltimes_{\alpha}^{\infty} \mathcal{A}$

$$\hat{\phi}(f^0, \ldots, f^n) = \int_{\sum_{j=0}^{n} t_j = 0} \phi(f^0_{t_0}, \ldots, f^n_{t_n})$$

Invariant cocycles

$\mathcal{A}$: Fréchet, $\alpha\colon \mathbb{R} \curvearrowright \mathcal{A}$ smooth
X: generator of α
ϕ: cyclic n-cocycle on $\mathcal{A}$, invariant under α

- Dual cocycle $\hat{\phi}$ on $\mathbb{R} \ltimes_\alpha^\infty \mathcal{A}$

$$\hat{\phi}(f^0, \ldots, f^n) = \int_{\sum_{j=0}^n t_j = 0} \phi(f^0_{t_0}, \ldots, f^n_{t_n})$$

- Interior product $i_X\phi$ on $\mathcal{A}$

$$i_X\phi(a_0, \ldots, a_{n+1}) = \sum_{j=1}^{n+1} (-1)^j \tau_\phi(a_0 da_1 \cdots X(a_j) \cdots da_{n+1}).$$

Invariant cocycles and ENN-isomorphism

Theorem (Y., 2010)

$\mathcal{A}$: Fréchet, $\alpha\colon \mathbb{R} \curvearrowright \mathcal{A}$ smooth
ϕ: cyclic n-cocycle on $\mathcal{A}$, invariant under α

Invariant cocycles and ENN-isomorphism

Theorem (Y., 2010)

$\mathcal{A}$: Fréchet, $\alpha\colon \mathbb{R} \curvearrowright \mathcal{A}$ smooth

ϕ: cyclic n-cocycle on $\mathcal{A}$, invariant under α

$$[\#_{\hat{\alpha}}\hat{\phi}] = [i_X \phi] \text{ in } \mathrm{HC}^{n+1}(\mathcal{A})$$

Outline: $\tilde{X}$: generator of $\hat{\hat{\sigma}} \Rightarrow \hat{\phi} = i_{\tilde{X}}\phi$

Invariant cocycles and ENN-isomorphism

Theorem (Y., 2010)

$\mathcal{A}$: Fréchet, $\alpha \colon \mathbb{R} \curvearrowright \mathcal{A}$ smooth
ϕ: cyclic n-cocycle on $\mathcal{A}$, invariant under α

$$[\#_{\hat{\alpha}} \hat{\phi}] = [i_X \phi] \text{ in } \mathrm{HC}^{n+1}(\mathcal{A})$$

Outline: $\tilde{X}$: generator of $\hat{\hat{\sigma}} \Rightarrow \hat{\phi} = i_{\tilde{X}} \phi$ Connes's 2×2-matrix trick for σ and $\hat{\hat{\sigma}}$:

$$\mathbb{R} \curvearrowright M_2(\mathbb{R} \ltimes_{\hat{\sigma}} \mathbb{R} \ltimes_{\sigma} \mathcal{A}) \quad \text{(with generator } Y\text{)}$$

$\Rightarrow$ Two embeddings $\Psi_1, \Psi_2 \colon \mathbb{R} \ltimes_{\hat{\sigma}} \mathbb{R} \ltimes_{\sigma} \mathcal{A} \to M_2(\mathbb{R} \ltimes_{\hat{\sigma}} \mathbb{R} \ltimes_{\sigma} \mathcal{A})$

Invariant cocycles and ENN-isomorphism

Theorem (Y., 2010)

$\mathcal{A}$: Fréchet, $\alpha\colon \mathbb{R} \curvearrowright \mathcal{A}$ smooth
ϕ: cyclic n-cocycle on $\mathcal{A}$, invariant under α

$$[\#_{\hat{\alpha}}\hat{\phi}] = [i_X\phi] \text{ in } \mathrm{HC}^{n+1}(\mathcal{A})$$

Outline: $\tilde{X}$: generator of $\hat{\hat{\sigma}} \Rightarrow \hat{\hat{\phi}} = i_{\tilde{X}}\phi$ Connes's 2×2-matrix trick for σ and $\hat{\hat{\sigma}}$:

$$\mathbb{R} \curvearrowright M_2(\mathbb{R} \ltimes_{\hat{\sigma}} \mathbb{R} \ltimes_{\sigma} \mathcal{A}) \quad \text{(with generator } Y\text{)}$$

$\Rightarrow$ Two embeddings $\Psi_1, \Psi_2\colon \mathbb{R} \ltimes_{\hat{\sigma}} \mathbb{R} \ltimes_{\sigma} \mathcal{A} \to M_2(\mathbb{R} \ltimes_{\hat{\sigma}} \mathbb{R} \ltimes_{\sigma} \mathcal{A})$

$$\Psi_1^*(i_Y(\phi \otimes \mathrm{Tr}_{M_2})) = i_{\tilde{X}}\phi \qquad \Psi_2^*(i_Y(\phi \otimes \mathrm{Tr}_{M_2})) = i_X\phi$$

Invariant cocycles and ENN-isomorphism, cont.

Example:

- α: action of $\mathbb{Z}$ on a Fréchet algebra $\mathcal{B}$

Invariant cocycles and ENN-isomorphism, cont.

Example:

- α: action of $\mathbb{Z}$ on a Fréchet algebra $\mathcal{B}$
- $\partial\colon K_{*+1}(\mathbb{Z} \ltimes_\alpha \mathcal{B}) \to K_*(\mathcal{B})$ connecting map in the Pimsner–Voiculescu sequence

Invariant cocycles and ENN-isomorphism, cont.

Example:

- α: action of $\mathbb{Z}$ on a Fréchet algebra $\mathcal{B}$
- ∂: $K_{*+1}(\mathbb{Z} \ltimes_\alpha \mathcal{B}) \to K_*(\mathcal{B})$ connecting map in the Pimsner–Voiculescu sequence
- D: generator of $\hat{\alpha}$ on $\mathbb{Z} \ltimes_\alpha \mathcal{B}$

Invariant cocycles and ENN-isomorphism, cont.

Example:

- α: action of $\mathbb{Z}$ on a Fréchet algebra $\mathcal{B}$
- ∂: $K_{*+1}(\mathbb{Z} \ltimes_\alpha \mathcal{B}) \to K_*(\mathcal{B})$ connecting map in the Pimsner–Voiculescu sequence
- D: generator of $\hat{\alpha}$ on $\mathbb{Z} \ltimes_\alpha \mathcal{B}$
- ϕ: $\hat{\alpha}$-invariant cyclic n-cocycle on $\mathbb{Z} \ltimes_\alpha \mathcal{B}$

Invariant cocycles and ENN-isomorphism, cont.

Example:

- α: action of $\mathbb{Z}$ on a Fréchet algebra $\mathcal{B}$
- $\partial\colon K_{*+1}(\mathbb{Z} \ltimes_\alpha \mathcal{B}) \to K_*(\mathcal{B})$ connecting map in the Pimsner–Voiculescu sequence
- D: generator of $\hat{\alpha}$ on $\mathbb{Z} \ltimes_\alpha \mathcal{B}$
- ϕ: $\hat{\alpha}$-invariant cyclic n-cocycle on $\mathbb{Z} \ltimes_\alpha \mathcal{B}$

$$\Rightarrow \langle i_D \phi, x \rangle = \langle \phi, \partial(x) \rangle$$

Correspondence of invariant cocycles

ϕ: cyclic *n*-cocycle on $\mathcal{A}$, invariant under σ

Correspondence of invariant cocycles

ϕ: cyclic *n*-cocycle on $\mathcal{A}$, invariant under σ

$\Rightarrow \hat{\hat{\phi}}$ is a cyclic cocycle over $\mathbb{R} \ltimes_{\widehat{\sigma^{(1)}}, \sigma^{(2)}_{\theta t}} \mathbb{R} \ltimes_{\sigma^{(1)}} \mathcal{A}$.
