Faculty : Engineering

Contractor selection is one of the main activities of clients. Without a proper and accurate method for selecting the most appropriate contractor, the performance of the project will be affected. The usage of statistical method is implemented by Public Works Department as a better tool for the selection of suitable contractor. This method would avoid a personal preference during selection of contractor for government project. Furthermore, this method will ensure the price submitted by the tenderer is reflective of the current market conditions.

The statistical method uses mean, standard deviation and coefficient variation and this has been applied via a computer programme based

on Microsoft Excel for ease of calculation. Previously the contractor selection process is based on the lowest price or as compared to the Quantity Surveyor's estimate and this method exhibit an inherent weakness. Result from the survey questionnaire shows that the contractors agreed that the government has implemented a systematic approach using statistical method.

One sample *t*-test was conducted to further validate the perception of the contractors to the new practice of tender selection using statistical method and the results from the respondents show that on the average, all the contractors agreed to the new practice of tender selection using statistical method.

Pemilihan Kontraktor adalah antara aktiviti terpenting bagi pihak klien. Tanpa menggunakan kaedah pemilihan yang sesuai dan tepat untuk pemilihan kontraktor, prestasi projek akan terganggu. Penggunaan kaedah statistik yang dilaksanakan oleh Jabatan Kerja Raya, merupakan kaedah yang terbaik dan sesuai untuk pemilihan kontraktor. Penggunaan kaedah ini dapat mengelakkan kepentingan peribadi seseorang semasa pemilihan kontraktor untuk projek kerajaan. Selain daripada itu ia juga dapat menentukan bahawa harga tender yang ditawarkan oleh kontraktor adalah kompetitif berbanding dengan harga pasaran.

Kaedah statistik yang digunakan adalah min, sisihan piawai dan pekali ubahan dan kaedah ini dipermudahkan pengiraan dengan menggunakan program komputer yang berdasarkan 'Microsoft Excel'.

Proses pemilihan kontraktor sebelumnya adalah berdasarkan harga yang terendah ataupun anggaran Jurukur Bahan dan penggunaan kaedah ini banyak menimbulkan keburukan. Keputusan daripada kaji selidik yang telah dijalankan menunjukkan pihak kontraktor bersetuju bahawa pihak kerajaan telah melaksanakan kaedah yang sistematik melalui pemilihan kontraktor berdasarkan statistik.

Satu 't-test' yang dijalankan untuk pengesahan terhadap pandangan kontraktor terhadap kaedah pemilihan kontraktor yang terkini menggunakan kaedah statistik dan hasil daripada responden menunjukkan secara purata, kesemua kontraktor bersetuju terhadap kaedah yang terbaru pemilihan kontraktor menggunakan kaedah statistik.

ACKNOWLEDGEMENT

First of all, I would like to express my deepest thank to The Almighty Allah S.W.T for giving me the strength and patience during completing this research.

The author appreciates the support provided by the main supervisor Ir. Salihuddin Hassim, Associate Professor Ir. Dr. Mohd. Razali Abd. Kadir and Associate Professor Dr. Megat Hamdan Megat Ahmad as a committee member for very helpful supervision of the research of which this report is a part of the compulsory to complete a Master programme in Project Management.

Much appreciated are the useful contributions of staffs at Public Works Department, Kuala Lumpur for their information regarding tendering procedure and provided their documents and cost data for this research, very helpful staff at Master Builders Association Sdn. Bhd. for giving me opportunity to conducting survey at their seminar and eminent construction managers who participated in the survey. Special thanks for their cooperation in this research.

Last but not least, my beloved family for their support and encouragement to complete this research.

THANKS YOU

I certify that an Examination Committee has met on 28 February 2006 to conduct the final examination of Faridah Bt. Muhamad Halil on her Master of Science thesis entitled “ Contractor’s Perception of the Use of Statistical Approach in the Tender Process at the Public Works Department, Malaysia” with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree)

Regulation 1981. The Committee recommends that the candidate be awarded the relevant degree. Members of the Examination Committee are as follows:

Y. Bhg. Profesor Abang Abdullah Abang Ali

Professor
Faculty of Graduate Studies
Universiti Putra Malaysia
(Chairman)

Profesor Madya Dr. Ratnasamy Muniandy

Professor
Faculty of Graduate Studies
Universiti Putra Malaysia
(Internal Examiner)

Dr. Mohammad Saleem

Professor
Faculty of Graduate Studies
Universiti Putra Malaysia
(Internal Examiner)

Profesor Madya Dr. Faridah Shafi

Professor
Faculty of Graduate Studies
Universiti Putra Malaysia
(External)

HASANAH MOHD. GHAZALI, PhD.

Professor/Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia

Date:

DECLARATION

I hereby declare that the thesis is based on my original work except for quotations and citations which have been duly acknowledged. I also declare that it has not been previously or concurrently submitted for any other degree at UPM or other institutions.
