INTRODUCTION	1
CHAPTER 1. WEAK CONVERGENCE IN METRIC SPACES	7
1. Measures in Metric Spaces, 7	
<i>Measures and Integrals, 7, Tightness, 9</i>	
2. Properties of Weak Convergence, 11	
<i>Portmanteau Theorem, 11, Other Criteria, 14</i>	
3. Some Special Cases, 17	
<i>Euclidean Space, 17, The Circle, 18, The</i>	
<i>Space R^∞, 19, The Space C, 19, Product</i>	
<i>Spaces, 20</i>	
4. Convergence in Distribution, 22	
<i>Random Elements, 22, Convergence in Distri-</i>	
<i>bution, 23, Convergence in Probability, 24,</i>	
<i>Product Spaces, 26</i>	
5. Weak Convergence and Mappings, 29	
<i>Continuous Mappings, 29, Main Theorem,</i>	
<i>30, Integration to the Limit, 31, An Extension</i>	
<i>of Theorem 5.1, 33</i>	
6. Prohorov's Theorem, 35	
<i>Relative Compactness, 35, The Direct Theorem,</i>	
<i>37, The Converse, 40</i>	

7. First Applications, 41
Smooth Functions, 41, *The Central Limit Theorem*, 42, *Characteristic Functions*, 45, *The Cramér-Wold Device*, 48, *Local and Integral Limit Theorems*, 49, *Weak Convergence on the Circle and Torus*, 50

CHAPTER 2. THE SPACE C

54

8. Weak Convergence and Tightness in C , 54
Weak Convergence, 54, *Tightness*, 54, *Random Functions*, 57, *Coordinate Variables*, 60
9. The Existence of Wiener Measure, 61
Wiener Measure, 61, *The Brownian Bridge*, 64, *Separable Stochastic Processes*, 65
10. Donsker's Theorem, 68
The Theorem, 68, *An Application*, 70, *A Necessary Condition for Tightness*, 73, *Another Proof of Donsker's Theorem*, 73
11. Functions of Brownian Motion Paths, 77
Maximum and Minimum, 77, *The Arc Sine Law*, 80, *The Brownian Bridge*, 83
12. Fluctuations of Partial Sums, 87
Maxima, 87, *Product Moments*, 88, *Applications*, 89, *Proof of Theorem 12.1*, 91, *Moments*, 94, *A Tightness Criterion*, 95, *Further Inequalities*, 98
13. Empirical Distribution Functions, 103

CHAPTER 3. THE SPACE D

109

14. The Geometry of D , 109
The Space D , 109, *The Skorohod Topology*, 111, *Completeness of D* , 115, *Compactness in D* , 116, *A Second Characterization of Compactness*, 118, *Finite-Dimensional Sets*, 120
15. Weak Convergence and Tightness in D , 123
Finite-Dimensional Distributions, 123, *Tightness*, 125, *Random Elements of D* , 128, *A Criterion for Convergence*, 128, *Criteria for*

Existence, 130, *Other Criteria*, 133, *Separable Stochastic Processes*, 134

16. Applications, 137
Donsker's Theorem, 137, *Dominated Measures*, 139, *Empirical Distribution Functions*, 141
17. Random Change of Time, 143
Randomly Selected Partial Sums, 143, *Random Change of Time*, 144, *Applications*, 145, *Renewal Theory*, 148
18. The Uniform Topology, 150

CHAPTER 4. DEPENDENT VARIABLES 154

19. Diffusion, 154
A Characterization of Brownian Motion, 154, *Other Diffusion Processes*, 158
20. Mixing Processes, 166
 φ -Mixing, 166, *Inequalities for Moments*, 170, *Functional Central Limit Theorem*, 174, *Integrals in Place of Sums*, 178, *Nonstationarity*, 179
21. Functions of Mixing Processes, 182
Preliminaries, 182, *Functional Central Limit Theorem*, 184, *Applications*, 191, *Diophantine Approximation*, 193, *Nonstationarity*, 194
22. Empirical Distribution Functions, 195
 φ -Mixing Processes, 195, *Functions of φ -Mixing Processes*, 199
23. Martingales, 205
24. Exchangeable Random Variables, 208
Sampling, 208, *Exchangeable Variables*, 212

APPENDIX I. METRIC SPACES 215

Separability, 215, *Compactness*, 217, *Upper Semicontinuity*, 218, *The Space R^∞* , 218, *The Space C* , 220

APPENDIX II. MISCELLANY	222
<i>Measurability, 222, Change of Variable, 222, Tail Probabilities, 223, Scheffé's Theorem, 223, Subspaces, 224, Product Spaces, 224, Measurability of D_n, 225, Helly's Theorem, 226, Kolmogorov's Theorem, 228, Measurability of Some Mappings, 230, More Measurability, 232</i>	
APPENDIX III. THEORETICAL COMPLEMENTS	233
<i>The Problem of Measure, 233, Separable Measures, 234, The Topology of Weak Convergence, 236, Prohorov's Theorem, 239</i>	
BIBLIOGRAPHY	243
