Acknowledgements

I dedicate this article to the memory of Anat Krauskopf. K. Kreuzer, J. Haber, V. Lundblad, R. Reddel, K. Hoke, and S. Buonomo provided extremely helpful criticism of these ideas. I thank J. Griffith for comments on this manuscript and for long-term collaborative efforts on t-loops. B. Bowerman is acknowledged for sage advice ('Evolution happened. Get over it.'). Space limitations prevented me from providing a thorough review of all relevant publications and I refer to the cited reviews for many important primary references. Research on telomeres in my laboratory is funded by the National Institutes of Health, the National Cancer Institute and the Ellison Foundation.

CORRECTION

TRAFFIC JAMS AFFECT PLANT DEVELOPMENT AND SIGNAL TRANSDUCTION

Marci Surpin and Natasha Raikhel

Nature Rev. Mol. Cell Biol. **5**, 100–109 (2004)

The authors wish to correct an error in the annotation of the bibliography. This version differs from the previous version, in which reference 51 was incorrectly annotated as 'This paper highlighted the importance of the endodermal tissue in mediating the gravitropic response, and provided a detailed description of vacuolar defects in two gravitropic-response mutants.' The authors intended to publish reference 51 without further annotation; and the annotation was intended for reference 52. This comment has now been removed.

The authors of this article apologize to the authors of reference 52 for the error. The online versions of this article have been corrected.
