CONTENTS

Preface	ix
Nomenclature	xi
1 INTRODUCTION	1
1-1 Introduction	1
1-2 Cryogenic Heat Transfer Applications	3
1-3 Material Properties at Cryogenic Temperatures	4
1-3-1 Specific Heats of Gases	5
1-3-2 Specific Heats of Liquids	8
1-3-3 Specific Heat of Solids	10
1-3-4 Electronic Specific Heat	15
1-3-5 Thermal Conductivity of Gases	16
1-3-6 Thermal Conductivity of Liquids	20
1-3-7 Thermal Conductivity of Solids	20
1-4 Cryogenic Insulations	24
1-4-1 Expanded Closed-Cell Foams	25
1-4-2 Gas-filled Powders and Fibrous Materials	28
1-4-3 Evacuated Powders and Fibrous Materials	29
1-4-4 Opacified Powder Insulations	31
1-4-5 Microsphere Insulation	32
1-4-6 Multilayer Insulations (MLI)	33
Problems	38
References	39

2	CONDUCTION HEAT TRANSFER	41
2-1	Governing Equations	41
2-2	One-Dimensional Steady-State Conduction	42
2-3	Conduction in Composite Materials	47
2-4	Thermal Contact Resistance	52
2-5	Conduction in Fins	57
2-6	Properties of Frost at Cryogenic Temperatures	61
2-7	Cool-down with Coated Surfaces	64
2-8	Two- and Three-Dimensional Conduction	70
2-9	Transient Conduction Heat Transfer	80
2-10	Cool-down of Cryogenic Fluid Storage Vessels	84
	Problems	90
	References	95
3	CONVECTION HEAT TRANSFER	97
3-1	Governing Equations	97
3-2	Forced Convection Heat Transfer in a Circular Tube	100
3-3	Heat Transfer in Noncircular Channels	106
3-4	Forced Convection Heat Transfer in External Flow	109
3-5	Free Convective Over Plates	117
3-6	Free Convection Over Horizontal Cylinders	120
3-7	Natural Convection in Enclosures	121
3-8	Heat Transfer in the Near-Critical Region	123
3-9	Heat Transfer Correlations in the Near-Critical Region	129
3-10	Kapitza Conductance	131
	Problems	137
	References	140
4	TWO-PHASE HEAT TRANSFER AND PRESSURE DROP	143
4-1	Flow Regimes in Two-Phase Flow	143
4-2	Pressure Drop in Two-Phase Flow	149
4-3	Lockhart-Martinelli Correlation	150
4-4	Homogeneous Flow Model	158
4-5	Boiling Heat Transfer	160
4-6	Nucleate Pool Boiling	164
4-7	Peak Nucleate Boiling Point	166
4-8	Pool Film Boiling	168
4-9	Forced Convection Boiling	172
4-10	Condensation Outside Tubes	179

4-11	Condensation Inside Horizontal Tubes	183
4-12	Freezing at Cryogenic Temperatures	189
4-13	Solid-Liquid (Slush) Flow and Heat Transfer	200
	Problems	206
	References	210
5	RADIATION HEAT TRANSFER AND FREE-MOLECULAR CONDUCTION	215
5-1	Blackbody Radiation	215
5-2	Thermal Radiation Properties	219
5-3	Radiation Configuration Factor	225
5-4	Radiant Exchange Between Two Gray Surfaces	230
5-5	The Network Method for Enclosures	232
5-6	Radiation from LNG Fires	240
5-7	Free Molecular Flow	243
5-8	Free-Molecular Heat Transfer	248
5-9	Free-molecular heat transfer in enclosures	253
	Problems	257
	References	263
6	CRYOGENIC HEAT EXCHANGERS	265
6-1	Cryogenic Heat Exchanger Types	265
6-1-1	Tubular Exchangers	266
6-1-2	Giauque-Hampson Exchanger	266
6-1-3	Plate-Fin Exchangers	269
6-1-4	Perforated-Plate Exchangers	271
6-1-5	Sintered Metal Powder Exchangers	272
6-2	NTU-Effectiveness Design Method	272
6-3	Giauque-Hampson Heat Exchanger Design	280
6-4	Plate-Fin Heat Exchanger Design	287
6-5	Perforated-Plate Exchanger Design	296
6-6	Effect of Variable Specific Heat	304
6-7	Effect of Longitudinal Heat Conduction	311
6-8	Effect of Heat Transfer From Ambient	318
6-9	Regenerators	324
6-10	Regenerator Design	332
6-11	Regenerator Design Example	339
	Problems	343
	References	350

viii CONTENTS

APPENDIXES	353
A Conversion Factors—Conventional Units to SI Units	353
B Properties of Saturated Liquids (SI Units)	357
C Properties of Saturated Vapors (SI Units)	361
D Properties of Gases at 1 Atm (SI Units)	365
INDEX	369
