1	<b>SHELXL</b>	1
	<i>Peter taller</i>	
1.1	The SHELX program suite	1
	1.1.1 <i>SHELXTL and other programs</i>	1
1.2	SHELXL	3
	1.2.1 <i>Program organization</i>	3
	1.2.2 <i>The instruction file <b>name . ins</b></i>	4
	1.2.3 <i>The reflection data file <b>name . hkl</b></i>	5
	1.2.4 <i>Merging data in SHELXL</i>	5
	1.2.5 <i>The connectivity table</i>	6
2	<b>Crystal structure refinement</b>	7
	<i>Peter Miler</i>	
2.1	Least-squares refinement	8
	2.1.1 <i>Refinement against F or F<sup>2</sup> - is that a question?</i>	9
2.2	Weak data and high-resolution cut-off	9
2.3	Residual factors	11
2.4	Parameters	12
2.5	Constraints	13
	2.5.1 <i>Site occupancy factors</i>	13
	2.5.2 <i>Special position constraints</i>	13
	2.5.3 <i>Rigid group constraints</i>	14
	2.5.4 <i>Floating origin constraints</i>	15
	2.5.5 <i>Hydrogen atoms</i>	15
	2.5.6 <i>Constraints in SHELXL</i>	15
2.6	Restraints	16
	2.6.1 <i>Geometrical restraints</i>	17
	2.6.2 <i>Restraints on displacement parameters</i>	19
	2.6.3 <i>Other restraints</i>	21
2.7	Free variables in SHELXL	22
2.8	Results	23
	2.8.1 <b>Bond lengths and angles</b>	23
	2.8.2 <i>Torsion angles</i>	23
	2.8.3 <i>Atoms on common planes</i>	24
	2.8.4 <i>Hydrogen bonds</i>	24
	2.8.5 <i>The <b>RTAB</b> command</i>	24
	2.8.6 <i>The <b>MORE</b> command</i>	25
	2.8.7 <i>The .ciffile</i>	25
2.9	Refinement problems	25

3	Hydrogen atoms	26
	<i>Peter Moller</i>	
3.1	<b>X-H</b> bond lengths and Ueq values of H atoms	26
3.2	Hydrogen bound to different atom types	27
3.2.1	<b>Hydrogen bound to carbon atoms</b>	27
3.2.2	<i>Hydrogen bound to nitrogen and oxygen</i>	28
3.2.3	<b>Hydrogen bound to metals</b>	29
3.3	Placing hydrogen atoms in SHELXL	29
3.3.1	<i>List of most common m and n values in HFIX commands</i>	30
3.3.2	<i>Semi free refinement of acidic hydrogen atoms</i>	31
3.4	Hydrogen bonds in SHELXL	32
3.5	Examples	32
3.5.1	<i>Routine hydrogen atom placement: C<sub>31</sub>H<sub>54</sub>M<sub>6</sub>N<sub>2</sub>O<sub>2</sub></i>	32
3.5.2	<i>Hydrogen atoms in a Zr-hydride</i>	35
3.5.3	<i>Acidic hydrogen atoms and hydrogen bonds</i>	37
4	Atom type assignment	42
	<i>Peter Moller</i>	
4.1	All electrons are blue	42
4.2	Chemical knowledge	43
4.3	Crystallographic knowledge	43
4.4	Examples	45
4.4.1	<i>Tetrameric InCl<sub>3</sub>-the N or O question</i>	45
4.4.2	<i>A cobalt salt</i>	48
4.4.3	<i>Unclear central metal atom</i>	50
5	Disorder	56
	<i>Peter Miller</i>	
5.1	Types of disorder	57
5.1.1	<i>Substitutional disorder</i>	57
5.1.2	<i>Positional disorder</i>	58
5.1.3	<i>Mess-a special case of disorder</i>	59
5.2	Refinement of disorder	59
5.2.1	<i>Refinement of disorder with SHELXL</i>	59
5.3	Examples	67
5.3.1	<i>Gallium-iminosilicate-Disorder of two ethyl groups</i>	68
5.3.2	<i>Disorder of a Ti(Ili) compound</i>	73
5.3.3	<i>A mixed crystal treated as occupancy disorder</i>	80
5.3.4	<i>Disorder of solvent molecules</i>	81
5.3.5	<i>Three types of disorder in one structure: cycloikositetraphenylene</i>	91

6	<b>Pseudo-Symmetry</b>	97
	<i>Peter Muller</i>	
6.1	Global pseudo-symmetry	98
6.2	True NCS	98
6.3	Examples	99
6.3.1	<i>Pn or P2<sub>1</sub>/n</i>	99
6.3.2	<i>[Si(NH2)2CH(SiMe<sub>3</sub>)<sub>2</sub>]<sub>2</sub>: P1 with Z - 12</i>	103
7	<b>Twinning</b>	106
	<i>Regine Herbst-Inner</i>	
7.1	Definition of a Twin	106
7.2	Classification of twins	109
7.2.1	<i>Twinning by merohedry</i>	109
7.2.2	<i>Twinning by pseudo-merohedry</i>	111
7.2.3	<i>Twinning by reticular merohedry</i>	112
7.2.4	<i>Non-merohedral twins</i>	114
7.3	Tests for twinning	118
7.4	Structure solution	119
7.5	Twin refinement	120
7.6	Determination of the absolute structure	121
7.7	Warning signs of twinning	121
7.8	Examples	122
7.8.1	<i>Twinning by merohedry</i>	122
7.8.2	<i>An example of pseudo-merohedral twinning</i>	127
7.8.3	<i>First example of twinning by reticular merohedry</i>	130
7.8.4	<i>Second example of twinning by reticular merohedry</i>	133
7.8.5	<i>First example of non-merohedral twinning</i>	140
7.8.6	<i>Second example of non-merohedral twinning</i>	144
7.9	Conclusions	149
8	<b>Artefacts</b>	150
	<i>Peter Muller</i>	
8.1	What is an Artefact?	150
8.1.1	<i>Libration</i>	151
8.1.2	<i>Shortened triple bonds</i>	152
8.1.3	<i>Hydrogen positions</i>	153
8.1.4	<i>Fourier truncation errors</i>	153
8.2	What is not an artefact?	154
8.3	Example	154
8.3.1	<i>Fourier termination error in C30H47N9Zr5</i>	154

## 9 Structure validation

*Anthony L. Spek*

9.1	Validation	160
9.2	Validation <i>tests</i> implemented in PLATON	161
9.2.1	<i>Missed symmetry</i>	161
9.2.2	<i>Voids</i>	161
9.2.3	<i>Displacement ellipsoids</i>	162
9.2.4	<i>Bond lengths and angles</i>	162
9.2.5	<i>Atom type assignment</i>	162
9.2.6	<i>Intermolecular contacts</i>	163
9.2.7	<i>Hydrogen bonds</i>	163
9.2.8	<i>Connectivity</i>	163
9.2.9	<i>Disorder</i>	163
9.2.10	<i>Reflection data</i>	164
9.2.11	<i>Refinement parameters</i>	164
9.3	<i>When to validate</i>	164
9.4	Concluding remarks	164

## 10 Protein refinement 166

*Thomas R. Schneider*

10.1	Atomic resolution refinement vs. standard refinement	168
10.1.1	<i>Anisotropic displacement parameters</i>	168
10.1.2	<i>Multiple discrete sites</i>	169
10.1.3	<i>Hydrogens</i>	169
10.1.4	<i>Solvent</i>	170
10.1.5	<i>Standard uncertainties</i>	170
10.2	<i>Stages of a typical refinement</i>	171
10.2.1	<i>Getting started</i>	171
10.2.2	<i>Rough adjustments of the model at 1.5 Å</i>	172
10.2.3	<i>Including data to atomic resolution</i>	173
10.2.4	<i>Going anisotropic</i>	174
10.2.5	<i>Rebuilding the model at atomic resolution</i>	174
10.2.6	<i>Inclusion of hydrogens-when and how</i>	178
10.2.7	<i>Solvent</i>	179
10.2.8	<i>Finalizing the model</i>	180
10.2.9	<i>Estimation of coordinate uncertainties</i>	182
10.2.10	<i>Analysis and presentation of the structure</i>	183
10.3	Examples	184
10.3.1	<i>Course of a typical refinement of a protein</i>	184
10.3.2	<i>Determination of standard uncertainties for protein-ligand contacts</i>	185

11	Protein structure (cross) validation	187
	<i>Michael R. Sawaya</i>	
11.1	PROCHECK	188
11.2	WHAT_CHECK	191
	11.2.1 <i>List of close non-bonded contacts</i>	191
	11.2.2 <i>Unsatisfied hydrogen bond donors/acceptors</i>	192
	11.2.3 <i>List of isolated water molecules</i>	193
11.3	Verify3D	193
11.4	Errat	194
11.5	Prove	195
12	General remarks	197
	<i>Peter Miller</i>	
12.1	How many refinement cycles do I need?	197
12.2	What to do with NPD atoms?	197
12.3	How many restraints may I use in a structure?	198
12.4	Coordination geometries of some cations	199
12.5	Some typical bond lengths	201
12.6	Resolution tables	202
	References	204
	Further Reading	209
