

Curve and Surface Fitting with Splines

PAUL DIERCKX

*Professor, Computer Science Department,
Katholieke Universiteit Leuven, Belgium*

CLARENDON PRESS • OXFORD

1995

Contents

Preface	vii
List of Figures	xv
List of Tables	xvii

PART I: SPLINE FUNCTIONS

1 UNIVARIATE SPLINES	3
1.1 Definitions	3
1.2 The B -spline representation	5
1.2.1 Divided differences	5
1.2.2 B -splines: definition and basic properties	8
1.2.3 Splines as linear combinations of B -splines	10
1.3 On calculating with B -splines	12
1.3.1 Evaluation of a spline function	12
1.3.2 Derivatives of a spline function	13
1.3.3 The definite integral of a spline function	15
1.3.4 Knot insertion algorithms	16
1.3.5 Fourier coefficients of a spline function	18
1.3.6 The zeros of a spline function	20
2 BIVARIATE SPLINES	23
2.1 Tensor product splines	23
2.1.1 Definitions	23
2.1.2 Evaluation, differentiation and integration	26
2.1.3 The spherical harmonic coefficients of bivariate splines	27
2.1.4 Contour lines of a bivariate spline	30
2.2 Splines on triangulations	32
2.2.1 Powell-Sabin splines	33

2.2.2	Simplex splines	36
-------	---------------------------	----

PART II: CURVE FITTING

3	CURVE FITTING: AN INTRODUCTION	43
3.1	Curve fitting: a constructive approach	43
3.2	Curve fitting with splines	44
3.2.1	A survey of methods	44
3.2.2	Some extensions	51
4	LEAST-SQUARES SPLINE CURVE FITTING	53
4.1	Least-squares splines with fixed knots	53
4.1.1	The normal equations	54
4.1.2	An orthogonalization method	55
4.2	Least-squares splines with variable knots	58
4.2.1	A non-linear constrained minimization problem	58
4.2.2	A specific optimization algorithm	62
4.3	An automatic curve fitting routine	67
4.3.1	A starting position for the knots	67
4.3.2	The optimal number of knots	68
4.3.3	Numerical examples	69
5	SMOOTHING SPLINE CURVE FITTING	75
5.1	The smoothing approximation criterion	75
5.2	The smoothing spline	76
5.2.1	The method of Lagrange	76
5.2.2	The calculation of the B -spline coefficients	76
5.2.3	The properties of the smoothing spline	80
5.2.4	Determination of the smoothing parameter	82
5.3	The knot placing strategy	84
5.4	The choice of the smoothing factor	88
5.5	Numerical results	91
6	MORE SMOOTHING SPLINE CURVES	95
6.1	Smoothing with periodic splines	95
6.1.1	Method	95
6.1.2	Numerical results	99
6.2	Smoothing with end point derivative constraints	101
6.2.1	Zero end point derivatives	101
6.2.2	Finite end point derivatives	104
6.2.3	Infinite end point derivatives	106
6.3	Smoothing with parametric splines	109

6.3.1	Method	109
6.3.2	Practical remarks	111
6.3.3	Spline curves for CAGD	113

7 FITTING WITH CONVEXITY CONSTRAINTS 119

7.1	Shape preserving approximation	119
7.2	Convex least-squares cubic splines	120
7.2.1	A quadratic programming problem	120
7.2.2	The Theil–Van de Panne procedure	121
7.2.3	The calculation of the B -spline coefficients	122
7.2.4	The organizational aspects	124
7.3	Automatic smoothing with convexity constraints	127
7.4	Numerical results	129

PART III: SURFACE FITTING

8 SURFACE FITTING: AN INTRODUCTION 137

8.1	Surface fitting: a constructive approach	137
8.2	Surface fitting with splines	138
8.2.1	Scattered data methods	138
8.2.2	Mesh data methods	140
8.2.3	Extensions	142
8.3	Surface fitting: a variational approach	144

9 SCATTERED DATA SURFACE FITTING 147

9.1	The least-squares criterion	147
9.1.1	The observation matrix	147
9.1.2	Rank deficiency	150
9.1.3	Curved knot lines	153
9.2	The smoothing criterion	158
9.2.1	The smoothing norm	158
9.2.2	The smoothing spline	159
9.2.3	The knot placing strategy	162
9.2.4	Numerical results	164

10 MESH DATA SURFACE FITTING 169

10.1	Matrix calculus: notation and properties	169
10.2	The least-squares criterion	170
10.3	The smoothing criterion	172
10.3.1	The new smoothing spline	172
10.3.2	The choice of knots	176
10.3.3	Numerical results	179

10.4	Incomplete grids	185
10.4.1	Statement of the problem	185
10.4.2	Direct method	185
10.4.3	Iterative method	187
10.5	Two-stage approximation methods	190
10.6	Extremely large data sets	192
11	MORE SCATTERED DATA SMOOTHING	197
11.1	Smoothing using polar coordinates	197
11.1.1	Smoothing splines for the unit disk	197
11.1.2	Generalizations	205
11.1.3	Numerical results	207
11.2	Smoothing using spherical coordinates	211
11.2.1	Smoothing splines for the sphere	211
11.2.2	Numerical results	217
12	MORE MESH DATA SMOOTHING	223
12.1	Smoothing over a polar grid	223
12.1.1	The smoothing problem	223
12.1.2	Origin derivatives provided	224
12.1.3	Optimal origin derivatives	225
12.1.4	Practical considerations and results	227
12.2	Smoothing over a spherical grid	230
12.3	Surface reconstruction from planar contours	232
12.3.1	Introduction	232
12.3.2	Smoothing in cylindrical coordinates	233
12.3.3	Smoothing with parametric surfaces	242
12.3.4	Spline surfaces for CAGD	245
PART IV: FITPACK		
13	AVAILABLE SOFTWARE	249
13.1	The FITPACK software package	249
13.1.1	Contents	249
13.1.2	Organization	250
13.1.3	Availability and documentation	254
13.2	Concluding remarks	266
	References	271
	Index	281
