| Preface | ix |
| 1. 1+1 DIMENSIONAL INTEGRABLE SYSTEMS | 1 |
| 1.1 KdV equation, MKdV equation and their Darboux transformations | 1 |
| 1.1.1 Original Darboux transformation | 1 |
| 1.1.2 Darboux transformation for KdV equation | 2 |
| 1.1.3 Darboux transformation for MKdV equation | 3 |
| 1.1.4 Examples: single and double soliton solutions | 6 |
| 1.1.5 Relation between Darboux transformations for KdV equation and MKdV equation | 10 |
| 1.2 AKNS system | 11 |
| 1.2.1 2×2 AKNS system | 11 |
| 1.2.2 $N \times N$ AKNS system | 16 |
| 1.3 Darboux transformation | 18 |
| 1.3.1 Darboux transformation for AKNS system | 18 |
| 1.3.2 Invariance of equations under Darboux transformations | 23 |
| 1.3.3 Darboux transformations of higher degree and the theorem of permutability | 25 |
| 1.3.4 More results on the Darboux matrices of degree one | 30 |
| 1.4 KdV hierarchy, MKdV-SG hierarchy, NLS hierarchy and AKNS system with $u(N)$ reduction | 34 |
| 1.4.1 KdV hierarchy | 35 |
| 1.4.2 MKdV-SG hierarchy | 40 |
| 1.4.3 NLS hierarchy | 46 |
| 1.4.4 AKNS system with $u(N)$ reduction | 48 |

| | | |
|-------|--|-----|
| 1.5 | Darboux transformation and scattering, inverse scattering theory | 51 |
| 1.5.1 | Outline of the scattering and inverse scattering theory for the 2×2 AKNS system | 51 |
| 1.5.2 | Change of scattering data under Darboux transformations for $su(2)$ AKNS system | 58 |
| 2. | 2+1 DIMENSIONAL INTEGRABLE SYSTEMS | 65 |
| 2.1 | KP equation and its Darboux transformation | 65 |
| 2.2 | 2+1 dimensional AKNS system and DS equation | 68 |
| 2.3 | Darboux transformation | 70 |
| 2.3.1 | General Lax pair | 70 |
| 2.3.2 | Darboux transformation of degree one | 71 |
| 2.3.3 | Darboux transformation of higher degree and the theorem of permutability | 75 |
| 2.4 | Darboux transformation and binary Darboux transformation for DS equation | 78 |
| 2.4.1 | Darboux transformation for DSII equation | 78 |
| 2.4.2 | Darboux transformation and binary Darboux transformation for DSI equation | 82 |
| 2.5 | Application to 1+1 dimensional Gelfand-Dickey system | 84 |
| 2.6 | Nonlinear constraints and Darboux transformation in 2+1 dimensions | 87 |
| 3. | $N + 1$ DIMENSIONAL INTEGRABLE SYSTEMS | 103 |
| 3.1 | $n + 1$ dimensional AKNS system | 103 |
| 3.1.1 | $n + 1$ dimensional AKNS system | 103 |
| 3.1.2 | Examples | 106 |
| 3.2 | Darboux transformation and soliton solutions | 108 |
| 3.2.1 | Darboux transformation | 108 |
| 3.2.2 | $u(N)$ case | 110 |
| 3.2.3 | Soliton solutions | 111 |
| 3.3 | A reduced system on R^n | 116 |
| 4. | SURFACES OF CONSTANT CURVATURE, BÄCKLUND CONGRUENCES | 121 |
| 4.1 | Theory of surfaces in the Euclidean space \mathbf{R}^3 | 122 |
| 4.2 | Surfaces of constant negative Gauss curvature, sine-Gordon equation and Bäcklund transformations | 126 |

| | | |
|-------|---|-----|
| 4.2.1 | Relation between sine-Gordon equation and surface of constant negative Gauss curvature in \mathbf{R}^3 | 126 |
| 4.2.2 | Pseudo-spherical congruence | 129 |
| 4.2.3 | Bäcklund transformation | 132 |
| 4.2.4 | Darboux transformation | 135 |
| 4.2.5 | Example | 139 |
| 4.3 | Surface of constant Gauss curvature in the Minkowski space $\mathbf{R}^{2,1}$ and pseudo-spherical congruence | 141 |
| 4.3.1 | Theory of surfaces in the Minkowski space $\mathbf{R}^{2,1}$ | 141 |
| 4.3.2 | Chebyshev coordinates for surfaces of constant Gauss curvature | 144 |
| 4.3.3 | Pseudo-spherical congruence in $\mathbf{R}^{2,1}$ | 149 |
| 4.3.4 | Bäcklund transformation and Darboux transformation for surfaces of constant Gauss curvature in $\mathbf{R}^{2,1}$ | 154 |
| 4.4 | Orthogonal frame and Lax pair | 174 |
| 4.5 | Surface of constant mean curvature | 179 |
| 4.5.1 | Parallel surface in Euclidean space | 179 |
| 4.5.2 | Construction of surfaces | 181 |
| 4.5.3 | The case in Minkowski space | 184 |
| 5. | DARBOUX TRANSFORMATION AND HARMONIC MAP | 189 |
| 5.1 | Definition of harmonic map and basic equations | 189 |
| 5.2 | Harmonic maps from R^2 or $R^{1,1}$ to S^2 , H^2 or $S^{1,1}$ | 192 |
| 5.3 | Harmonic maps from $R^{1,1}$ to $U(N)$ | 199 |
| 5.3.1 | Riemannian metric on $U(N)$ | 199 |
| 5.3.2 | Harmonic maps from $R^{1,1}$ to $U(N)$ | 201 |
| 5.3.3 | Single soliton solutions | 207 |
| 5.3.4 | Multi-soliton solutions | 210 |
| 5.4 | Harmonic maps from R^2 to $U(N)$ | 213 |
| 5.4.1 | Harmonic maps from R^2 to $U(N)$ and their Darboux transformations | 213 |
| 5.4.2 | Soliton solutions | 219 |
| 5.4.3 | Uniton | 220 |
| 5.4.4 | Darboux transformation and singular Darboux transformation for unitons | 225 |
| 6. | GENERALIZED SELF-DUAL YANG-MILLS AND YANG-MILLS-HIGGS EQUATIONS | 237 |
| 6.1 | Generalized self-dual Yang-Mills flow | 237 |

| | | |
|-------|--|-----|
| 6.1.1 | Generalized self-dual Yang-Mills flow | 237 |
| 6.1.2 | Darboux transformation | 242 |
| 6.1.3 | Example | 245 |
| 6.1.4 | Relation with AKNS system | 247 |
| 6.2 | Yang-Mills-Higgs field in 2+1 dimensional Minkowski space-time | 248 |
| 6.2.1 | Yang-Mills-Higgs field | 248 |
| 6.2.2 | Darboux Transformations | 249 |
| 6.2.3 | Soliton solutions | 251 |
| 6.3 | Yang-Mills-Higgs field in 2+1 dimensional anti-de Sitter space-time | 256 |
| 6.3.1 | Equations and their Lax pair | 256 |
| 6.3.2 | Darboux transformations | 257 |
| 6.3.3 | Soliton solutions in $SU(2)$ case | 260 |
| 6.3.4 | Comparison with the solutions in Minkowski space-time | 263 |
| 7. | TWO DIMENSIONAL TODA EQUATIONS AND LAPLACE SEQUENCES OF SURFACES | 267 |
| 7.1 | Signed Toda equations | 267 |
| 7.2 | Laplace sequences of surfaces in projective space \mathbf{P}_{n-1} | 271 |
| 7.3 | Darboux transformation | 277 |
| 7.4 | Su chain (Finikoff configuration) | 281 |
| 7.5 | Elliptic version of Laplace sequence of surfaces in \mathbf{CP}^n | 291 |
| 7.5.1 | Laplace sequence in \mathbf{CP}^n | 291 |
| 7.5.2 | Equations of harmonic maps from \mathbf{R}^2 to \mathbf{CP}^n in homogeneous coordinates | 292 |
| 7.5.3 | Cases of indefinite metric | 295 |
| 7.5.4 | Harmonic maps from $\mathbf{R}^{1,1}$ | 296 |
| 7.5.5 | Examples of harmonic sequences from \mathbf{R}^2 to \mathbf{CP}^n or $\mathbf{R}^{1,1}$ to \mathbf{CP}^n | 296 |
| | References | 299 |
