

# DEFINABILITY AND COMPUTABILITY

Yuri L. Ershov

*Novosibirsk State University  
and Institute of Mathematics  
Novosibirsk, Russia*

Consultants Bureau • New York, London, and Moscow

# Contents

Chapter 1. $\Sigma$ -Definability and the Gödel Incompleteness Theorem . . . . .	1
1.1. RQ-Formulas and $\Sigma$ -Formulas . . . . .	1
1.2. Definability by Formulas . . . . .	13
1.3. Positive Formulas and Monotonic Operators . . . . .	20
1.4. $\Sigma$ -Predicates and $\Sigma$ -Functions on $\Omega$ . . . . .	26
1.5. $\Sigma$ -Definability of the Truth of $\Sigma$ -Formulas on $\Omega$ . . . . .	38
1.6. Universal $\Sigma$ -Predicates and Universal Partial $\Sigma$ -Functions . . . . .	51
1.7. The Church Theorem and the Gödel Incompleteness Theorem . . . . .	56
Chapter 2. Computability on Admissible Sets . . . . .	71
2.1. Algebraic Systems $\Omega$ and $\text{HF}(\emptyset)$ . . . . .	71
2.2. The KPU Theory. Admissible Sets . . . . .	82
2.3. The $\Sigma$ -Reflection, $\Delta$ -Separation, and $\Sigma$ -Collection Principles . . . . .	89
2.4. $\Sigma$ -Operators, the Gandy Theorem, and First-Order Definability of $\Sigma$ -Operators . . . . .	95
2.5. $\Sigma$ -Recursive definitions . . . . .	104
2.6. $\Sigma$ -Definability of the Truth of $\Sigma$ -Formulas and a Universal $\Sigma$ -Predicate . . . . .	111

2.7. KPU-Models . . . . .	122
2.8. Reducibilities . . . . .	134
<b>Chapter 3. Selected Topics . . . . .</b>	<b>143</b>
3.1. Constructible Sets . . . . .	143
3.2. Recursively Saturated Systems . . . . .	152
3.3. Flattening and Forcing . . . . .	159
3.4. Definability and $\Sigma$ -Definability of Algebraic Systems . . . . .	174
3.5. Computability in Special Admissible Sets . . . . .	185
3.6. $\Sigma$ -Admissible Families . . . . .	202
3.7. Dynamic Logic . . . . .	216
3.8. $\Sigma$ -Predicates of Finite Types . . . . .	228
3.9. Effective $f$ -Spaces . . . . .	239
<b>Appendix . . . . .</b>	<b>251</b>
<b>References (Main List) . . . . .</b>	<b>257</b>
<b>References (Additional List) . . . . .</b>	<b>259</b>
<b>Subject Index . . . . .</b>	<b>261</b>
