CLARENDON PRESS · OXFORD

1995

# CONTENTS

<b>Introduction</b>	<b>1</b>
<b>1 Degree theory for continuous functions</b>	<b>5</b>
1.1 Topological degree for $C^1$ functions	5
1.2 Topological degree for continuous functions	16
1.3 Generalization of the degree	20
1.4 Exercises	25
<b>2 Degree theory in finite-dimensional spaces</b>	<b>30</b>
2.1 Dependence of the degree on $\phi$ and $p$	30
2.2 Dependence of the degree on the domain $D$	32
2.3 The multiplication theorem	35
2.4 An application of Hopf's theorem	39
2.5 Degree and winding number	41
2.6 Exercises	46
<b>3 Some applications of the degree theory to topology</b>	<b>48</b>
3.1 The Brouwer Fixed Point Theorem	48
3.2 Odd mappings	54
3.3 The Jordan Separation Theorem	64
3.4 Exercises	71
<b>4 Measure theory and Sobolev spaces</b>	<b>74</b>
4.1 Review of measure theory	74
4.2 Hausdorff measures	78
4.3 Overview of Sobolev spaces	87
4.4 $p$ -capacity	92
<b>5 Properties of the degree for Sobolev functions</b>	<b>106</b>
5.1 Results of weakly differential mappings	107
5.2 Weakly monotone functions	119
5.3 Change of variables via the multiplicity function	131
5.4 Change of variables via the degree	135
5.5 Change of variables for Sobolev functions	140
<b>6 Local invertibility of Sobolev functions and applications</b>	<b>149</b>
6.1 Local invertibility in $W^{1,N}$	149
6.2 Energy functionals involving variation of the domain	160

<b>7</b>	<b>Degree in infinite-dimensional spaces</b>	<b>172</b>
7.1	Introduction to the Leray–Schauder degree	172
7.2	Properties of the Leray–Schauder degree	177
7.3	Fixed point theorems	185
7.4	An application of the degree theory to ODEs	190
7.5	First application of the degree theory to PDEs	192
7.6	Second application of the degree theory to PDEs	199
7.7	Exercises	203
	<b>References</b>	<b>205</b>
	<b>Index</b>	<b>209</b>
