BOTANICAL MONOGRAPHS · VOLUME 15

Demography and Evolution in Plant Populations

EDITED BY

OTTO T. SOLBRIG

Department of Biology and
Gray Herbarium
Harvard University

BLACKWELL SCIENTIFIC PUBLICATIONS

OXFORD LONDON EDINBURGH MELBOURNE

E.F. R+

Contents

Foreword *by* H. G. BAKER, xiii

List of Contributors, xi

- 1 Demography and Natural Selection, 1
OTTO T. SOLBRIG
Life history strategy and fitness, 2
Problems in measuring fitness, 3
Natural selection and the life cycle, 5
 Pre-dispersal phase, 5
 Dispersal phase, 8
 Germination and establishment phase, 11
 Adult phase, 12
 Flowering, gametogenesis and fertilization, 16
Approaches to the study of population dynamics, 18
- 2 Demographic Factors in Populations of Plants, 21
JAMES WHITE
Demography of the individual plant, 22
Demography of modules, 23
Demography of genetically distinct plants (genets), 34
Size structure and age structure in plant populations, 45
- 3 Genetic Structure of Plant Populations, 49
OTTO T. SOLBRIG
Number of genes controlling a character and gene action, 51
 Serial gene systems, 52
 Multiple gene systems, 53
 Polygenic gene systems, 54
 Modifier gene systems, 55
Single locus variation and heterosis, 55
Coadaption and storage of genetic variation, 60
Genetic structure and demography, 63
Summary and conclusions, 65

- 4 Demographic Factors and Mating Patterns in Angiosperms, 67**
DAVID G. LLOYD
 Ecological and geographical distribution of self and cross-fertilization, 68
 Distribution of single species, 68
 Habit, 68
 Habitat, 69
 General advantages of self and cross-fertilization, 71
 Modes of self-fertilization, 72
 Effects of population size and structure, 73
 Effects on the level of externally mediated pollination, 74
 Effects on the degree of heterosis, 75
 Direct effects on the frequency of self-fertilization, 75
 Effects of uncertain pollination levels on selfing by annuals and perennials, 76
 Habitat—dependent heterosis, 77
 Unshared sites, 78
 Shared sites, 79
 Complex environments, 81
 Habitually colonizing species, 82
 Production of propagules, 83
 Compatible fertilization of immigrants, 83
 Pollinator requirements, 83
 Nature of temporary sites and populations, 84
 Population persistence, 84
 Advantages of self and cross-fertilization, 84
 Appendix, 87
- 5 Demography and Vegetative Reproduction, 89**
WARREN G. ABRAHAMSON
 Kinds of asexual reproduction, 90
 Occurrence of vegetative reproduction, 91
 Advantages of vegetative reproduction, 95
 Trade-offs between sexual and vegetative reproduction, 97
 Abiotic factors affecting vegetative reproduction, 97
 Moisture, 97
 Soil texture and fertility, 98
 Light and temperature, 99
 Biotic factors affecting vegetative reproduction, 99
 Pollination, 99
 Competition and density, 100
 Stability, 102
 Succession, 103
 Problems of application of demography to vegetative reproduction, 104
- 6 The Biology of Seeds in the Soil, 107**
ROBERT COOK
 Dispersal, 107
 Number of seeds, 111
 Longevity, 112
 Mortality, 115
 Dormancy, 117
 Disturbance, 121
 Dispersal in time and space, 123
 Seed shape and the safe site concept, 126

7 Plant Demography in Agricultural Systems, 131

R. W. SNAYDON

Plant demography in an agricultural context, 132

Agricultural plant populations, 133

Control of environment, 134

Diversity of crop species, 135

Uniform annual crops, 136

Density and the individual, 136

Density and crop yield, 140

Effects of genotype and environment, 141

Heterogeneous annual crops, 142

Genetic change in heterogeneous populations, 143

Crop yield and yield stability, 145

Annual weeds in crops, 148

Demography of weed populations, 149

Genetic structure of weed populations, 150

Weeds and crop yield, 151

Heterogeneous perennial crops, 152

Density and stand yield, 153

Density and the individual plant, 154

Seed production, 155

The fate of seed and seedlings, 155

Population dynamics, 156

Genetic change, 156

Competition between cultivars, 158

The yield of mixtures, 159

Conclusion, 160

8 Demographic Problems in Tropical Systems, 161

JOSÉ SARUKHÁN

Population structures and dynamics: numerical properties, 162

Population flux models and life tables, 162

Life expectancies, 166

Reproductive schedules, 168

Dynamics of seed numbers, 173

Dynamics of seedling numbers, 177

Populations of mature plants, 181

Competition, predation and patterns of species distribution, 182

Population growth and individual growth: energy allocation, 184

Conclusion, 186

References, 189

Taxon Index, 217

Subject Index, 221
