<i>Preface</i>	vii
<i>Principal symbols</i>	xiii
<i>List of acronyms</i>	xvii
1. Introduction to electromagnetic theory	1
1.1 Introduction	1
1.2 Maxwell's equations	1
1.2.1 Charge continuity equation	3
1.2.2 Boundary conditions	5
1.3 Energy flux of electromagnetic field	7
1.4 Conservation law of the electromagnetic field	10
1.5 Electromagnetic wave equations	14
1.5.1 The Poynting vector and the Stokes parameter	16
1.5.2 Harmonic time dependence and the Fourier transform	21
2. Wave optics and polarization	27
2.1 Electromagnetic theory of propagation	27
2.1.1 Intensity of a light wave	28
2.1.2 Harmonic plane waves	30
2.1.3 Harmonic spherical waves	34
2.2 Complex representation of monochromatic light waves	35
2.2.1 Superposition of waves	37
2.2.2 Standing waves	40
2.2.3 Phase and group velocities	41
2.3 Complex representation of non-monochromatic fields	44

2.3.1 Convolution relationship	47
2.3.2 Case of quasi-monochromatic light	49
2.3.3 Successive wave-trains emitted by an atom	51
2.3.4 Coherence length and coherence time	54
2.4 Polarization of plane monochromatic waves	57
2.4.1 Stokes vector representation	61
2.4.2 Optical elements required for polarimetry	65
2.4.3 Degree of polarization	71
2.4.4 Transformation of Stokes parameters	74
2.4.4.1 Polarimeter	77
2.4.4.2 Imaging polarimeter	79
3. Interference and diffraction	81
3.1 Fundamentals of interference	81
3.2 Interference of two monochromatic waves	81
3.2.1 Young's double-slit experiment	86
3.2.2 Michelson's interferometer	90
3.2.3 Mach-Zehnder interferometer	94
3.3 Interference with quasi-monochromatic waves	96
3.4 Propagation of mutual coherence	102
3.4.1 Propagation laws for the mutual coherence	102
3.4.2 Wave equations for the mutual coherence	104
3.5 Degree of coherence from an extended incoherent source: partial coherence	106
3.5.1 The van Cittert-Zernike theorem	107
3.5.2 Coherence area	110
3.6 Diffraction	112
3.6.1 Derivation of the diffracted field	114
3.6.2 Fresnel approximation	117
3.6.3 Fraunhofer approximation	119
3.6.3.1 Diffraction by a rectangular aperture	121
3.6.3.2 Diffraction by a circular pupil	123
4. Image formation	127
4.1 Image of a source	127
4.1.1 Coherent imaging	132
4.1.2 Incoherent imaging	134
4.1.3 Optical transfer function	135
4.1.4 Image in the presence of aberrations	139

4.2	Imaging with partially coherent beams	141
4.2.1	Effects of a transmitting object	141
4.2.2	Transmission of mutual intensity	143
4.2.3	Images of trans-illuminated objects	146
4.3	The optical telescope	149
4.3.1	Resolving power of a telescope	154
4.3.2	Telescope aberrations	156
5.	Theory of atmospheric turbulence	159
5.1	Earth's atmosphere	159
5.2	Basic formulations of atmospheric turbulence	161
5.2.1	Turbulent flows	162
5.2.2	Inertial subrange	164
5.2.3	Structure functions of the velocity field	166
5.2.4	Kolmogorov spectrum of the velocity field	167
5.2.5	Statistics of temperature fluctuations	170
5.2.6	Refractive index fluctuations	172
5.2.7	Experimental validation of structure constants	176
5.3	Statistical properties of the propagated wave through turbulence	179
5.3.1	Contribution of a thin layer	180
5.3.2	Computation of phase structure function	182
5.3.3	Effect of Fresnel diffraction	184
5.3.4	Contribution of multiple turbulent layers	185
5.4	Imaging in randomly inhomogeneous media	187
5.4.1	Seeing-limited images	188
5.4.2	Atmospheric coherence length	192
5.4.3	Atmospheric coherence time	195
5.4.4	Aniso-planatism	196
5.5	Image motion	197
5.5.1	Variance due to angle of arrival	198
5.5.2	Scintillation	200
5.5.3	Temporal evolution of image motion	201
5.5.4	Image blurring	202
5.5.5	Measurement of r_0	204
5.5.6	Seeing at the telescope site	205
5.5.6.1	Wind shears	207
5.5.6.2	Dome seeing	207
5.5.6.3	Mirror seeing	209

6. Speckle imaging	211
6.1 Speckle phenomena	211
6.1.1 Statistical properties of speckle pattern	213
6.1.2 Superposition of speckle patterns	215
6.1.3 Power-spectral density	216
6.2 Speckle pattern interferometry with rough surface	220
6.2.1 Principle of speckle correlation fringe formation	220
6.2.2 Speckle correlation fringes by addition	224
6.2.3 Speckle correlation fringes by subtraction	225
6.3 Stellar speckle interferometry	227
6.3.1 Outline of the theory of speckle interferometry	229
6.3.2 Benefit of short-exposure images	232
6.3.3 Data processing	233
6.3.4 Noise reduction using Wiener filter	235
6.3.5 Simulations to generate speckles	238
6.3.6 Speckle interferometer	240
6.3.7 Speckle spectroscopy	243
6.3.8 Speckle polarimetry	244
6.4 Pupil-plane interferometry	246
6.4.1 Estimation of object modulus	246
6.4.2 Shear interferometry	248
6.5 Aperture synthesis with single telescope	253
6.5.1 Phase-closure method	253
6.5.2 Aperture masking method	255
6.5.3 Non-redundant masking interferometer	257
7. Adaptive optics	259
7.1 Basic principles	259
7.1.1 Greenwood frequency	260
7.1.2 Thermal blooming	262
7.2 Wavefront analysis using Zernike polynomials	264
7.2.1 Definition of Zernike polynomial and its properties .	264
7.2.2 Variance of wavefront distortions	267
7.2.3 Statistics of atmospheric Zernike coefficients	269
7.3 Elements of adaptive optics systems	271
7.3.1 Steering/tip-tilt mirrors	273
7.3.2 Deformable mirrors	274
7.3.2.1 Segmented mirrors	275
7.3.2.2 Ferroelectric actuators	276

7.3.2.3	Deformable mirrors with discrete actuators	278
7.3.2.4	Bimorph deformable mirror (BDM)	280
7.3.2.5	Membrane deformable mirrors	281
7.3.2.6	Liquid crystal DM	284
7.3.3	Deformable mirror driver electronics	285
7.3.4	Wavefront sensors	286
7.3.4.1	Shack Hartmann (SH) wavefront sensor	287
7.3.4.2	Curvature sensing	291
7.3.4.3	Pyramid WFS	293
7.3.5	Wavefront reconstruction	295
7.3.5.1	Zonal and modal approaches	296
7.3.5.2	Servo control	298
7.3.6	Accuracy of the correction	300
7.3.7	Reference source	304
7.3.8	Adaptive secondary mirror	308
7.3.9	Multi-conjugate adaptive optics	309
8.	High resolution detectors	311
8.1	Photo-electric effect	311
8.1.1	Detecting light	312
8.1.2	Photo-detector elements	314
8.1.3	Detection of photo-electrons	318
8.1.4	Photo-multiplier tube	323
8.1.5	Image intensifiers	327
8.2	Charge-coupled device (CCD)	331
8.2.1	Readout procedure	334
8.2.2	Characteristic features	336
8.2.2.1	Quantum efficiency	336
8.2.2.2	Charge Transfer efficiency	337
8.2.2.3	Gain	337
8.2.2.4	Dark current	338
8.2.3	Calibration of CCD	339
8.2.4	Intensified CCD	341
8.3	Photon-counting sensors	343
8.3.1	CCD-based photon-counting system	345
8.3.2	Digicon	346
8.3.3	Precision analog photon address (PAPA) camera . .	347
8.3.4	Position sensing detectors	348
8.3.5	Special anode cameras	349

8.4	Solid state technologies	353
8.4.1	Electron multiplying charge coupled device (EMCCD)	353
8.4.2	Superconducting tunnel junction	357
8.4.3	Avalanche photo-diodes	357
8.5	Infrared sensors	358
9.	Image processing	361
9.1	Post-detection image reconstruction	361
9.1.1	Shift-and-add algorithm	362
9.1.2	Selective image reconstruction	364
9.1.3	Speckle holography	365
9.1.4	Cross-spectrum analysis	366
9.1.5	Differential speckle interferometry	367
9.1.6	Knox-Thomson technique (KT)	368
9.1.7	Triple-correlation technique	371
9.1.7.1	Deciphering phase from bispectrum	375
9.1.7.2	Relationship between KT and TC	379
9.2	Iterative deconvolution techniques	382
9.2.1	Fienup algorithm	383
9.2.2	Blind iterative deconvolution (BID) technique	384
9.2.3	Richardson-Lucy algorithm	387
9.2.4	Maximum entropy method (MEM)	388
9.2.5	Pixon	389
9.2.6	Miscellaneous iterative algorithms	390
9.3	Phase retrieval	390
9.3.1	Phase-unwrapping	392
9.3.2	Phase-diversity	394
10.	Astronomy fundamentals	397
10.1	Black body radiation	397
10.1.1	Cavity radiation	398
10.1.2	Planck's law	400
10.1.3	Application of blackbody radiation concepts to stellar emission	403
10.1.4	Radiation mechanism	405
10.1.4.1	Atomic transition	406
10.1.4.2	Hydrogen spectra	408
10.2	Astronomical measurements	409
10.2.1	Flux density and luminosity	409

10.2.2 Magnitude scale	412
10.2.2.1 Apparent magnitude	413
10.2.2.2 Absolute magnitude	413
10.2.2.3 Bolometric corrections	414
10.2.3 Distance scale	415
10.2.4 Extinction	418
10.2.4.1 Interstellar extinction	418
10.2.4.2 Color excess	420
10.2.4.3 Atmospheric extinction	422
10.2.4.4 Instrumental magnitudes	423
10.2.4.5 Color and magnitude transformation	424
10.2.4.6 <i>UBV</i> transformation equations	425
10.2.5 Stellar temperature	427
10.2.5.1 Effective temperature	427
10.2.5.2 Brightness temperature	428
10.2.5.3 Color temperature	428
10.2.5.4 Kinetic temperature	429
10.2.5.5 Excitation temperature	430
10.2.5.6 Ionization temperature	431
10.2.6 Stellar spectra	432
10.2.6.1 Hertzsprung-Russell (HR) diagram	435
10.2.6.2 Spectral classification	438
10.2.6.3 Utility of stellar spectrum	442
10.3 Binary stars	445
10.3.1 Masses of stars	445
10.3.2 Types of binary systems	446
10.3.2.1 Visual binaries	447
10.3.2.2 Spectroscopic binaries	447
10.3.2.3 Eclipsing binaries	450
10.3.2.4 Astrometric binaries	452
10.3.3 Binary star orbits	453
10.3.3.1 Apparent orbit	454
10.3.3.2 Orbit determination	456
10.4 Conventional instruments at telescopes	459
10.4.1 Imaging with CCD	460
10.4.2 Photometer	461
10.4.3 Spectrometer	464
10.5 Occultation technique	468
10.5.1 Methodology of occultation observation	469

10.5.2 Science with occultation technique	472
 11. Astronomical applications	475
11.1 High resolution imaging of extended objects	475
11.1.1 The Sun	476
11.1.1.1 Solar structure	477
11.1.1.2 Transient phenomena	484
11.1.1.3 Solar interferometric observations	489
11.1.1.4 Solar speckle observation during eclipse	491
11.1.2 Jupiter	493
11.1.3 Asteroids	495
11.2 Stellar objects	497
11.2.1 Measurement of stellar diameter	497
11.2.2 Variable stars	500
11.2.2.1 Pulsating variables	500
11.2.2.2 Eruptive variables	503
11.2.2.3 Cataclysmic variables	504
11.2.3 Young stellar objects	506
11.2.4 Circumstellar shell	514
11.2.4.1 Planetary nebulae	518
11.2.4.2 Supernovae	523
11.2.5 Close binary systems	526
11.2.6 Multiple stars	529
11.2.7 Extragalactic objects	531
11.2.7.1 Active galactic nuclei (AGN)	534
11.2.7.2 Quasars	541
11.2.8 Impact of adaptive optics in astrophysics	542
11.3 Dark speckle method	547
 Appendix A Typical tables	553
 Appendix B Basic mathematics for Fourier optics	557
B.1 Fourier transform	557
B.1.1 Basic properties and theorem	558
B.1.2 Discrete Fourier transform	561
B.1.3 Convolution	561
B.1.4 Autocorrelation	563
B.1.5 Parseval's theorem	564
B.1.6 Some important corollaries	565

<i>Contents</i>	xxix
B.1.7 Hilbert transform	566
B.2 Laplace transform	567
B.3 Probability, statistics, and random processes	569
B.3.1 Probability distribution	569
B.3.2 Parameter estimation	573
B.3.3 Central-limit theorem	575
B.3.4 Random fields	575
Appendix C Bispectrum and phase values using triple-correlation algorithm	577
<i>Bibliography</i>	579
