Contents

1. SOME FORMAL ASPECTS OF DIFFUSION: BULK SOLIDS AND THIN FILMS 1
Devendra Gupta
Introduction. 1
Mathematical Basis of Diffusion 2
Single Crystals 2
Fick's First Law 2
Fick's Second Law. 3
Instantaneous Source Geometry. 4
Thick Layer Geometry 4
Infinite Couple with Surface Composition Constant. 5
Boltzmann-Matano Analysis 5
Structurally Inhomogeneous Samples 7
Experimental Techniques 13
Microsectioning Diffusion Measurements 14
Surface Accumulation Techniques 16
Thermodynamical Considerations. 20
Driving Force F on Individual Atoms Is Zero 20
Pressure and Mass Dependence of Diffusion 25
Pressure Dependence 25
Mass Dependence 26
Driving Force F on Individual Atoms Is Finite–Linear Chemical Diffusion Regime. 28
Non Linear Chemical Diffusion Regime 31
Structure of Grain Boundaries, Mobile Defects and Diffusion Hierarchy. 33
Grain Boundary Structure and State of Mobile Defects. 33
Mechanism of Grain Boundary Diffusion 38
Anisotropy and Orientation of Grain-Boundary Diffusion 40

Diffusion Data in Grain Boundaries and Thin Films: Diffusion Hierarchy 41
Relationship Among GB Diffusion, Lattice Diffusion and GB Energy 49
Influence of Solute Segregation on GB Self-Diffusion and Its Relationship with GB Energy, Solute Segregation and GB Diffusion 52
Thermal Behavior of $K\delta D_b$ 55
Composition Dependence of $K\delta D_b$ 58
Estimating Grain Boundary Segregation Parameters from Diffusion Measurements 61
Variable Effects of Solutes on GB Diffusion 62
Concluding Remarks 65
References 65

2. ANELASTIC RELAXATION AND DIFFUSION IN THIN-LAYER MATERIALS 73
Brian S. Berry
Introduction 73
Anelastic Relaxation Behavior 74
Quasi-Static Response Functions 75
Dynamic Anelastic Behavior: The Internal Friction Peak 79
Anelastic Behavior with Multiple or Distributed Relaxation Times 83
Thermally-Activated Relaxation Behavior 84
Experimental Methods 88
Vibrating-Reed Apparatus 89
The Mandrel Method for Quasi-Static Measurements 94
Accommodation Stress and the Bending Bilayer 97
Interstitial Solute Diffusion in BCC Metals 99
The Snoek Relaxation 100
Experimental Results 104
Hydrogen Diffusion in Metallic Glasses 111
The Hydrogen Reorientation Relaxation 112
The Gorsky Relaxation 117
Other Thermally-Activated Processes in Metallic Glasses 121
Grain-Boundary Diffusion in Pure and Alloyed Aluminum Films . . 123
Point-Defect Relaxations in Ion-Implanted Silicon 128
Structural Relaxation in Silicon Monoxide 133
Concluding Remarks 136
Appendix: Frequencies and Internal Friction of a Multilayered Reed 137
References 141

3. DIFFUSION IN ARTIFICIALLY MODULATED THIN FILMS 146
A. Lindsay Greer
Introduction 146
Theory 147

Interdiffusion in a Steep Concentration Gradient. 147
Gradient Energy Effects 149
Strain Effects 158
Non-Linear Diffusion Effects. 163
Measurement Techniques 167
Relationship to Other Diffusion Measurements 171
Stability of Modulated Structures. 174
Experimental Results on Crystalline Metals 175
Early Work. 175
Gold-Silver. 175
Copper-Palladium 176
Gold-Nickel 178
Copper-Gold. 182
Copper-Nickel. 183
Silver-Palladium 185
Ternary Systems 186
Experimental Results on Amorphous Metals. 187
Introduction to Amorphous Metals. 187
Interdiffusion Measurements 188
Discussion 192
Experimental Results on Semiconductors. 193
GaAs-AlAs 193
GaSb-InSb 194
Amorphous Si-Ge 195
Discussion 196
Conclusions 196
References. 198

4. DIFFUSION AND GROWTH IN OXIDE FILMS. 204
Alan Atkinson
Introduction. 204
Experimental Techniques 205
Secondary Ion Mass Spectroscopy (SIMS) Sectioning 205
Nuclear Reaction Depth Profiling. 207
Sputter-Sectioning of Radioactive Tracers 208
Chemical Dissolution 208
Gaseous Exchange. 208
Diffusion in Growing Oxide Films 209
Lattice Diffusion in Oxides 211
Point Defects in Oxides 211
Self-Diffusion 213
Cation Self-Diffusion 214
Oxygen Ion Self-Diffusion. 215
Diffusion in Doped Oxides 215
Heterovalent Doping 216
Homovalent Doping. 216
Solute Diffusion 217
Tracer Solute Diffusion 217

Dilute Limit 217
Non-Dilute 218
Amorphous Oxides 218
Theoretical Estimates of Diffusion Parameters 220
Short-Circuit Diffusion 222
Dislocation Diffusion 222
Grain Boundary Diffusion 223
Surface Diffusion 224
Theoretical Studies of Dislocations, Grain Boundaries and Surfaces 224
Dislocations 224
Grain Boundaries 224
Oxide Film Growth by Thermal Oxidation 225
Theory of Oxide Film Growth 225
Thick Films 225
Thin Films 226
Defects Injected at the Metal/Oxide Interface 228
Defects Injected at the Oxide/Gas Interface 229
Oxide Films Growing by Outward Cation Transport 231
Growth of CoO 231
Growth of NiO 231
Growth of Other Oxides by Cation Transport 234
Oxide Films Growing by Inward Oxygen Transport 234
Growth of Highly Protective Films 235
Oxidation of Alloys 235
Protection by Incorporated Coatings 237
Concluding Remarks 239
References 239

5. DIFFUSION-INDUCED GRAIN BOUNDARY MIGRATION IN THIN FILMS 245
Carol A. Handwerker
Introduction 245
Morphology and Kinetics of DIGM, DIR, and Liquid Film Migration 253
Systems Exhibiting DIGM and DIR 253
Grain Morphology of DIGM 256
Crystallographic Orientation of Alloyed Regions 257
Surface Relief 260
Kinetics of Migration 261
Compositions of Alloyed Regions 263
Nucleation of New Grains—Diffusion-Induced Recrystallization 267
Liquid Film Migration 270
Driving Force for Grain Boundary/Interface Motion 272
Distinctions Between Free Energy Changes and Driving Forces 272
Diffusional Transport in Polycrystals with Migrating Grain Boundaries 273

Driving Force for DIGM, DIR, and LFM 274
Effect of Coherency Strain on Interface Migration. 276
Model for Coherency Strain Energy 277
Migration of Liquid Films. 279
Migration Regimes for Liquid Films 282
Stress Relaxation Mechanisms 283
Migration Velocities and Morphology of the Migrating Interface 284
Controlled Variation of Strain 285
Tests of the Coherency Strain Theory for Liquid Film Migration 286
Migration Velocities. 287
Controlled Variation of Strain 288
Morphology of Migrating Interfaces 288
Other Driving Forces for Boundary Migration. 289
Liquid Film Migration in Ceramics 290
Effect of Diffusion-Induced Strain on Grain Boundary Migration. 291
Distinctions Between Grain Boundaries and Liquid Films 291
Qualitative Test of the Coherency Strain Theory for DIGM. . . . 292
Critical Values of $D\varrho/V$. 295
Features of Grain Boundaries Required to Quantitatively Model DIGM. 297
Unequal Grain Boundary Diffusivities 297
Unequal Lattice Diffusivities of the Solute and Solvent Species 298
Grain Boundaries as Sources/Sinks for Vacancies. 299
Geometrical Constraints 300
Grain Boundary Structure Effects in DIGM 301
Relative Rates of Grain Boundary and Lattice Diffusion. . . . 301
Stress Relief Mechanisms 302
Other Driving Forces 303
Mechanism Maps for DIGM and DIR. 303
Special Considerations for Thin Films 312
References. 314

6. EFFECTS OF AMBIENTS ON THIN FILM INTERACTIONS. 323
Chin-An Chang
Introduction. 323
Observed Ambient Effects. 324
Enhanced Interactions 324
Reduced Interactions. 325
Mechanisms for the Ambient Effects. 326
Sinking Effect Model 326
Surface Energy Model 327
Interface Oxide Model 327
Surface Potential Model 327
Observation of Other Ambient Effects from the Surface Potential Model. 330

Reduced Interaction in Au Systems by CO. 330
Reduced Interactions in Pt Systems by Oxygen. 332
Reduced Interactions by Oxygen for the Ni and Cu Systems . . . 333
Competing Ambient Effects 335
Diffusion Through a Less-Electronegative Metal Layer 340
Ambient Effects on Competing Interactions and on Preferential Reactions. 344
Oxidation Effects of the Outdiffused Species 346
Effect of Oxygen on the Silicide Formation 347
Applications and Future Studies. 354
Summary. 365
References. 366

7. ELECTROMIGRATION IN METALLIC THIN FILMS. 369
Thomas Kwok and Paul S. Ho
Introduction. 369
Electromigration in Bulk Metals. 371
Phenomenological Description. 371
Theory of Electromigration. 375
Techniques of Measurement 378
Electromigration in Substitutional Systems 382
Electromigration in Metallic Thin Films. 385
Nature of Electromigration in Metallic Thin Films. 385
Damage Formation and Kinetics. 387
Structural and Thermal Effects 389
Lifetime Measurement 392
Methods to Improve Electromigration Resistance 393
Electromigration in Fine Lines. 397
Scaling Trends 397
Process and Material Related Aspects 399
Effect of Microstructure. 400
Effect of Metal Line Geometry 403
Linelength Dependence 403
Linewidth Dependence. 407
Effect of Film Thickness. 409
Pulsed Current Powering Characteristics. 412
Electromigration in Multilevel Interconnection 416
Electromigration at Contacts. 416
Current Crowding and Local Heating in Studs and Vias. 420
Summary. 423
References. 425

8. DIFFUSION BARRIERS IN SEMICONDUCTOR CONTACT METALLIZATION 432
Hannu P. Kattelus and Marc A. Nicolet
Introduction. 432
General Considerations. 432
Functions of a Diffusion Barrier. 434

Electrical Requirements in Contacts 435
Summary. 437
Importance of the Choice of the Material and of the Deposition Process. 438
Basic Considerations 438
Single Crystalline Versus Non-Single Crystalline Films 440
Summary. 440
Polycrystalline Films Consisting of One Single Layer 441
Elemental Metallic Films. 441
Effect of Impurities—Stuffed Barrier. 443
Compound Film—Inert Barrier. 445
From Elemental to Compound Films 445
Single Phase Compounds. 448
Multiphase Compounds 462
Summary. 462
Amorphous Films Consisting of One Single Layer 463
General Observations 463
Examples of Amorphous Diffusion Barriers 468
Summary. 475
Multilayer Configurations 475
Sacrificial Barrier. 476
Contacting Layers 477
Tandem Barriers 480
Summary. 489
References. 491

9. THERMAL STABILITY OF Pb-ALLOY JOSEPHSON JUNCTIONS. . . . 499
Masanori Murakami
Introduction. 499
Thermal Strain of Films on Rigid Substrates. 501
Thermal Stability Below Room Temperature 504
Pb Thin Films. 504
Strain Behavior. 504
Microstructure Changes After Repeated Thermal Cycling . . . 507
Reduction of Strain Relaxation 514
Pb-In-Au Base Electrode Material 517
Strain Behavior. 518
Microstructure Change After Repeated Thermal Cycling. . . . 518
Correlation Between Device Reliability and Microstructure Change 520
Pb-Bi Counterelectrode Material. 524
Strain Behavior. 525
Microstructure Change After Repeated Thermal Cycling. . . . 525
Correlation Between Device Reliability and Microstructure Changes 530
Thermal Stability Above Room Temperature 532
Strain Behavior. 533
Primary Strain Relaxation Process 534

Secondary Relaxation Process 538
Hillock Formation of Pb-In-Au Base Electrode 538
Mechanism 538
Reduction of Hillock Formation 540
Summary 542
References 543

10. DIFFUSION AND ELECTROMIGRATION OF IMPURITIES IN LEAD SOLDERS 546
Chao-Kun Hu and Hillard B. Huntington
Introduction 546
Fast Diffusers in Pure Lead 548
Diffusion 548
Electromigration 551
Dilute Impurities in Lead-Tin Solders 554
Impurities Subjected to Trapping by the Added Tin 555
Diffusion 555
Electromigration 564
An Impurity Not Subject to Trapping—Silver 567
Diffusion 567
Electromigration 569
Experiments With 1000 ppm Nickel 569
Diffusion 570
Electromigration 572
Dilute Impurities in Lead-Indium Solders 573
Diffusion in Lead-Indium Alloys 573
Electromigration 577
Conclusion 578
References 579
