# Contents

Preface . . . . .	xvii
About the Author . . . . .	xix
About the Notation . . . . .	xxi

## I REPRESENTATION OF DIGITAL VIDEO

<b>1 BASICS OF VIDEO</b>	<b>1</b>
1.1 <b>Analog Video</b> . . . . .	1
1.1.1 Analog Video Signal . . . . .	2
1.1.2 Analog Video Standards . . . . .	4
1.1.3 Analog Video Equipment . . . . .	8
1.2 <b>Digital Video</b> . . . . .	9
1.2.1 Digital Video Signal . . . . .	9
1.2.2 Digital Video Standards . . . . .	11
1.2.3 Why Digital Video? . . . . .	14
1.3 <b>Digital Video Processing</b> . . . . .	16
<b>2 TIME-VARYING IMAGE FORMATION MODELS</b>	<b>19</b>
2.1 <b>Three-Dimensional Motion Models</b> . . . . .	20
2.1.1 Rigid Motion in the Cartesian Coordinates . . . . .	20
2.1.2 Rigid Motion in the Homogeneous Coordinates . . . . .	26
2.1.3 Deformable Motion . . . . .	27
2.2 <b>Geometric Image Formation</b> . . . . .	28
2.2.1 Perspective Projection . . . . .	28
2.2.2 Orthographic Projection . . . . .	30
2.3 <b>Photometric Image Formation</b> . . . . .	32
2.3.1 Lambertian Reflectance Model . . . . .	32
2.3.2 Photometric Effects of 3-D Motion . . . . .	33
2.4 <b>Observation Noise</b> . . . . .	33
2.5 <b>Exercises</b> . . . . .	34

<b>3</b>	<b>SPATIO-TEMPORAL SAMPLING</b>	<b>36</b>
3.1	<b>Sampling for Analog and Digital Video</b>	37
3.1.1	Sampling Structures for Analog Video	37
3.1.2	Sampling Structures for Digital Video	38
3.2	<b>Two-Dimensional Rectangular Sampling</b>	40
3.2.1	2-D Fourier Transform Relations	41
3.2.2	Spectrum of the Sampled Signal	42
3.3	<b>Two-Dimensional Periodic Sampling</b>	43
3.3.1	Sampling Geometry	44
3.3.2	2-D Fourier Transform Relations in Vector Form	44
3.3.3	Spectrum of the Sampled Signal	46
3.4	<b>Sampling on 3-D Structures</b>	46
3.4.1	Sampling on a Lattice	47
3.4.2	Fourier Transform on a Lattice	47
3.4.3	Spectrum of Signals Sampled on a Lattice	49
3.4.4	Other Sampling Structures	51
3.5	<b>Reconstruction from Samples</b>	53
3.5.1	Reconstruction from Rectangular Samples	53
3.5.2	Reconstruction from Samples on a Lattice	55
3.6	<b>Exercises</b>	56
<b>4</b>	<b>SAMPLING STRUCTURE CONVERSION</b>	<b>57</b>
4.1	<b>Sampling Rate Change for 1-D Signals</b>	58
4.1.1	Interpolation of 1-D Signals	58
4.1.2	Decimation of 1-D Signals	62
4.1.3	Sampling Rate Change by a Rational Factor	64
4.2	<b>Sampling Lattice Conversion</b>	66
4.3	<b>Exercises</b>	70
 <b>II TWO-DIMENSIONAL MOTION ESTIMATION</b>		
<b>5</b>	<b>OPTICAL FLOW METHODS</b>	<b>72</b>
5.1	<b>2-D Motion vs. Apparent Motion</b>	72
5.1.1	2-D Motion	73
5.1.2	Correspondence and Optical Flow	74
5.2	<b>2-D Motion Estimation</b>	76
5.2.1	The Occlusion Problem	78
5.2.2	The Aperture Problem	78
5.2.3	Two-Dimensional Motion Field Models	79
5.3	<b>Methods Using the Optical Flow Equation</b>	81
5.3.1	The Optical Flow Equation	81
5.3.2	Second-Order Differential Methods	82
5.3.3	Block Motion Model	83

5.3.4	Horn and Schunck Method . . . . .	84
5.3.5	Estimation of the Gradients . . . . .	85
5.3.6	Adaptive Methods . . . . .	86
5.4	<b>Examples</b> . . . . .	88
5.5	<b>Exercises</b> . . . . .	93
<b>6</b>	<b>BLOCK-BASED METHODS</b> . . . . .	<b>95</b>
6.1	<b>Block-Motion Models</b> . . . . .	95
6.1.1	Translational Block Motion . . . . .	96
6.1.2	Generalized/Deformable Block Motion . . . . .	97
6.2	<b>Phase-Correlation Method</b> . . . . .	99
6.2.1	The Phase-Correlation Function . . . . .	99
6.2.2	Implementation Issues . . . . .	100
6.3	<b>Block-Matching Method</b> . . . . .	101
6.3.1	Matching Criteria . . . . .	102
6.3.2	Search Procedures . . . . .	104
6.4	<b>Hierarchical Motion Estimation</b> . . . . .	106
6.5	<b>Generalized Block-Motion Estimation</b> . . . . .	109
6.5.1	Postprocessing for Improved Motion Compensation . . . . .	109
6.5.2	Deformable Block Matching . . . . .	109
6.6	<b>Examples</b> . . . . .	112
6.7	<b>Exercises</b> . . . . .	115
<b>7</b>	<b>PEL-RECURSIVE METHODS</b> . . . . .	<b>117</b>
7.1	<b>Displaced Frame Difference</b> . . . . .	118
7.2	<b>Gradient-Based Optimization</b> . . . . .	119
7.2.1	Steepest-Descent Method . . . . .	120
7.2.2	Newton-Raphson Method . . . . .	120
7.2.3	Local vs. Global Minima . . . . .	121
7.3	<b>Steepest-Descent-Based Algorithms</b> . . . . .	121
7.3.1	Netravali-Robbins Algorithm . . . . .	122
7.3.2	Walker-Rao Algorithm . . . . .	123
7.3.3	Extension to the Block Motion Model . . . . .	124
7.4	<b>Wiener-Estimation-Based Algorithms</b> . . . . .	125
7.5	<b>Examples</b> . . . . .	127
7.6	<b>Exercises</b> . . . . .	129
<b>8</b>	<b>BAYESIAN METHODS</b> . . . . .	<b>130</b>
8.1	<b>Optimization Methods</b> . . . . .	130
8.1.1	Simulated Annealing . . . . .	131
8.1.2	Iterated Conditional Modes . . . . .	134
8.1.3	Mean Field Annealing . . . . .	135
8.1.4	Highest Confidence First . . . . .	135

8.2	<b>Basics of MAP Motion Estimation</b> . . . . .	136
8.2.1	The Likelihood Model . . . . .	137
8.2.2	The Prior Model . . . . .	137
8.3	<b>MAP Motion Estimation Algorithms</b> . . . . .	139
8.3.1	Formulation with Discontinuity Models . . . . .	139
8.3.2	Estimation with Local Outlier Rejection . . . . .	146
8.3.3	Estimation with Region Labeling . . . . .	147
8.4	<b>Examples</b> . . . . .	148
8.5	<b>Exercises</b> . . . . .	150

### III THREE-DIMENSIONAL MOTION ESTIMATION AND SEGMENTATION

9	<b>METHODS USING POINT CORRESPONDENCES</b>	<b>152</b>
9.1	<b>Modeling the Projected Displacement Field</b> . . . . .	153
9.1.1	Orthographic Displacement Field Model . . . . .	153
9.1.2	Perspective Displacement Field Model . . . . .	154
9.2	<b>Methods Based on the Orthographic Model</b> . . . . .	155
9.2.1	Two-Step Iteration Method from Two Views . . . . .	155
9.2.2	An Improved Iterative Method . . . . .	157
9.3	<b>Methods Based on the Perspective Model</b> . . . . .	158
9.3.1	The Epipolar Constraint and Essential Parameters . . . . .	158
9.3.2	Estimation of the Essential Parameters . . . . .	159
9.3.3	Decomposition of the E-Matrix . . . . .	161
9.3.4	Algorithm . . . . .	164
9.4	<b>The Case of 3-D Planar Surfaces</b> . . . . .	165
9.4.1	The Pure Parameters . . . . .	165
9.4.2	Estimation of the Pure Parameters . . . . .	166
9.4.3	Estimation of the Motion and Structure Parameters . . . . .	166
9.5	<b>Examples</b> . . . . .	168
9.5.1	Numerical Simulations . . . . .	168
9.5.2	Experiments with Two Frames of Miss America . . . . .	173
9.6	<b>Exercises</b> . . . . .	175
10	<b>OPTICAL FLOW AND DIRECT METHODS</b>	<b>177</b>
10.1	<b>Modeling the Projected Velocity Field</b> . . . . .	177
10.1.1	Orthographic Velocity Field Model . . . . .	178
10.1.2	Perspective Velocity Field Model . . . . .	178
10.1.3	Perspective Velocity vs. Displacement Models . . . . .	179
10.2	<b>Focus of Expansion</b> . . . . .	180
10.3	<b>Algebraic Methods Using Optical Flow</b> . . . . .	181
10.3.1	Uniqueness of the Solution . . . . .	182
10.3.2	Affine Flow . . . . .	182

10.3.3	Quadratic Flow . . . . .	183
10.3.4	Arbitrary Flow . . . . .	184
10.4	<b>Optimization Methods Using Optical Flow</b> . . . . .	186
10.5	<b>Direct Methods</b> . . . . .	187
10.5.1	Extension of Optical Flow-Based Methods . . . . .	187
10.5.2	Tsai-Huang Method . . . . .	188
10.6	<b>Examples</b> . . . . .	190
10.6.1	Numerical Simulations . . . . .	191
10.6.2	Experiments with Two Frames of Miss America . . . . .	194
10.7	<b>Exercises</b> . . . . .	196
<b>11</b>	<b>MOTION SEGMENTATION</b> . . . . .	<b>198</b>
11.1	<b>Direct Methods</b> . . . . .	200
11.1.1	Thresholding for Change Detection . . . . .	200
11.1.2	An Algorithm Using Mapping Parameters . . . . .	201
11.1.3	Estimation of Model Parameters . . . . .	203
11.2	<b>Optical Flow Segmentation</b> . . . . .	204
11.2.1	Modified Hough Transform Method . . . . .	205
11.2.2	Segmentation for Layered Video Representation . . . . .	206
11.2.3	Bayesian Segmentation . . . . .	207
11.3	<b>Simultaneous Estimation and Segmentation</b> . . . . .	209
11.3.1	Motion Field Model . . . . .	210
11.3.2	Problem Formulation . . . . .	210
11.3.3	The Algorithm . . . . .	212
11.3.4	Relationship to Other Algorithms . . . . .	213
11.4	<b>Examples</b> . . . . .	214
11.5	<b>Exercises</b> . . . . .	217
<b>12</b>	<b>STEREO AND MOTION TRACKING</b> . . . . .	<b>219</b>
12.1	<b>Motion and Structure from Stereo</b> . . . . .	219
12.1.1	Still-Frame Stereo Imaging . . . . .	220
12.1.2	3-D Feature Matching for Motion Estimation . . . . .	222
12.1.3	Stereo-Motion Fusion . . . . .	224
12.1.4	Extension to Multiple Motion . . . . .	227
12.2	<b>Motion Tracking</b> . . . . .	229
12.2.1	Basic Principles . . . . .	229
12.2.2	2-D Motion Tracking . . . . .	232
12.2.3	3-D Rigid Motion Tracking . . . . .	235
12.3	<b>Examples</b> . . . . .	239
12.4	<b>Exercises</b> . . . . .	241

## IV VIDEO FILTERING

<b>13 MOTION COMPENSATED FILTERING</b>	<b>245</b>
13.1 <b>Spatio-Temporal Fourier Spectrum</b>	246
13.1.1 Global Motion with Constant Velocity	247
13.1.2 Global Motion with Acceleration	249
13.2 <b>Sub-Nyquist Spatio-Temporal Sampling</b>	250
13.2.1 Sampling in the Temporal Direction Only	250
13.2.2 Sampling on a Spatio-Temporal Lattice	251
13.2.3 Critical Velocities	252
13.3 <b>Filtering Along Motion Trajectories</b>	254
13.3.1 Arbitrary Motion Trajectories	255
13.3.2 Global Motion with Constant Velocity	256
13.3.3 Accelerated Motion	256
13.4 <b>Applications</b>	258
13.4.1 Motion-Compensated Noise Filtering	258
13.4.2 Motion-Compensated Reconstruction Filtering	258
13.5 <b>Exercises</b>	260
<b>14 NOISE FILTERING</b>	<b>262</b>
14.1 <b>Intraframe Filtering</b>	263
14.1.1 LMMSE Filtering	264
14.1.2 Adaptive (Local) LMMSE Filtering	267
14.1.3 Directional Filtering	269
14.1.4 Median and Weighted Median Filtering	270
14.2 <b>Motion-Adaptive Filtering</b>	270
14.2.1 Direct Filtering	271
14.2.2 Motion-Detection Based Filtering	272
14.3 <b>Motion-Compensated Filtering</b>	272
14.3.1 Spatio-Temporal Adaptive LMMSE Filtering	274
14.3.2 Adaptive Weighted Averaging Filter	275
14.4 <b>Examples</b>	277
14.5 <b>Exercises</b>	277
<b>15 RESTORATION</b>	<b>283</b>
15.1 <b>Modeling</b>	283
15.1.1 Shift-Invariant Spatial Blurring	284
15.1.2 Shift-Varying Spatial Blurring	285
15.2 <b>Intraframe Shift-Invariant Restoration</b>	286
15.2.1 Pseudo Inverse Filtering	286
15.2.2 Constrained Least Squares and Wiener Filtering	287
15.3 <b>Intraframe Shift-Varying Restoration</b>	289
15.3.1 Overview of the POCS Method	290
15.3.2 Restoration Using POCS	291

15.4	<b>Multiframe Restoration</b> . . . . .	292
15.4.1	Cross-Correlated Multiframe Filter . . . . .	294
15.4.2	Motion-Compensated Multiframe Filter . . . . .	295
15.5	<b>Examples</b> . . . . .	295
15.6	<b>Exercises</b> . . . . .	296
<b>16</b>	<b>STANDARDS CONVERSION</b> . . . . .	<b>302</b>
16.1	<b>Down-Conversion</b> . . . . .	304
16.1.1	Down-Conversion with Anti-Alias Filtering . . . . .	305
16.1.2	Down-Conversion without Anti-Alias Filtering . . . . .	305
16.2	<b>Practical Up-Conversion Methods</b> . . . . .	308
16.2.1	Intraframe Filtering . . . . .	309
16.2.2	Motion-Adaptive Filtering . . . . .	314
16.3	<b>Motion-Compensated Up-Conversion</b> . . . . .	317
16.3.1	Basic Principles . . . . .	317
16.3.2	Global-Motion-Compensated De-interlacing . . . . .	322
16.4	<b>Examples</b> . . . . .	323
16.5	<b>Exercises</b> . . . . .	329
<b>17</b>	<b>SUPERRESOLUTION</b> . . . . .	<b>331</b>
17.1	<b>Modeling</b> . . . . .	332
17.1.1	Continuous-Discrete Model . . . . .	332
17.1.2	Discrete-Discrete Model . . . . .	335
17.1.3	Problem Interrelations . . . . .	336
17.2	<b>Interpolation-Restoration Methods</b> . . . . .	336
17.2.1	Intraframe Methods . . . . .	337
17.2.2	Multiframe Methods . . . . .	337
17.3	<b>A Frequency Domain Method</b> . . . . .	338
17.4	<b>A Unifying POCS Method</b> . . . . .	341
17.5	<b>Examples</b> . . . . .	343
17.6	<b>Exercises</b> . . . . .	346
<b>V</b>	<b>STILL IMAGE COMPRESSION</b>	
<b>18</b>	<b>LOSSLESS COMPRESSION</b> . . . . .	<b>348</b>
18.1	<b>Basics of Image Compression</b> . . . . .	349
18.1.1	Elements of an Image Compression System . . . . .	349
18.1.2	Information Theoretic Concepts . . . . .	350
18.2	<b>Symbol Coding</b> . . . . .	353
18.2.1	Fixed-Length Coding . . . . .	353
18.2.2	Huffman Coding . . . . .	354
18.2.3	Arithmetic Coding . . . . .	357

18.3	<b>Lossless Compression Methods</b> . . . . .	360
18.3.1	Lossless Predictive Coding . . . . .	360
18.3.2	Run-Length Coding of Bit-Planes . . . . .	363
18.3.3	Ziv-Lempel Coding . . . . .	364
18.4	<b>Exercises</b> . . . . .	366
<b>19</b>	<b>DPCM AND TRANSFORM CODING</b>	<b>368</b>
19.1	<b>Quantization</b> . . . . .	368
19.1.1	Nonuniform Quantization . . . . .	369
19.1.2	Uniform Quantization . . . . .	370
19.2	<b>Differential Pulse Code Modulation</b> . . . . .	373
19.2.1	Optimal Prediction . . . . .	374
19.2.2	Quantization of the Prediction Error . . . . .	375
19.2.3	Adaptive Quantization . . . . .	376
19.2.4	Delta Modulation . . . . .	377
19.3	<b>Transform Coding</b> . . . . .	378
19.3.1	Discrete Cosine Transform . . . . .	380
19.3.2	Quantization/Bit Allocation . . . . .	381
19.3.3	Coding . . . . .	383
19.3.4	Blocking Artifacts in Transform Coding . . . . .	385
19.4	<b>Exercises</b> . . . . .	385
<b>20</b>	<b>STILL IMAGE COMPRESSION STANDARDS</b>	<b>388</b>
20.1	<b>Bilevel Image Compression Standards</b> . . . . .	389
20.1.1	One-Dimensional RLC . . . . .	389
20.1.2	Two-Dimensional RLC . . . . .	391
20.1.3	The JBIG Standard . . . . .	393
20.2	<b>The JPEG Standard</b> . . . . .	394
20.2.1	Baseline Algorithm . . . . .	395
20.2.2	JPEG Progressive . . . . .	400
20.2.3	JPEG Lossless . . . . .	401
20.2.4	JPEG Hierarchical . . . . .	401
20.2.5	Implementations of JPEG . . . . .	402
20.3	<b>Exercises</b> . . . . .	403
<b>21</b>	<b>VECTOR QUANTIZATION, SUBBAND CODING AND OTHER METHODS</b>	<b>404</b>
21.1	<b>Vector Quantization</b> . . . . .	404
21.1.1	Structure of a Vector Quantizer . . . . .	405
21.1.2	VQ Codebook Design . . . . .	408
21.1.3	Practical VQ Implementations . . . . .	408
21.2	<b>Fractal Compression</b> . . . . .	409

21.3	<b>Subband Coding</b> . . . . .	411
21.3.1	Subband Decomposition . . . . .	411
21.3.2	Coding of the Subbands . . . . .	414
21.3.3	Relationship to Transform Coding . . . . .	414
21.3.4	Relationship to Wavelet Transform Coding . . . . .	415
21.4	<b>Second-Generation Coding Methods</b> . . . . .	415
21.5	<b>Exercises</b> . . . . .	416

## VI VIDEO COMPRESSION

<b>22</b>	<b>INTERFRAME COMPRESSION METHODS</b>	<b>419</b>
22.1	<b>Three-Dimensional Waveform Coding</b> . . . . .	420
22.1.1	3-D Transform Coding . . . . .	420
22.1.2	3-D Subband Coding . . . . .	421
22.2	<b>Motion-Compensated Waveform Coding</b> . . . . .	424
22.2.1	MC Transform Coding . . . . .	424
22.2.2	MC Vector Quantization . . . . .	425
22.2.3	MC Subband Coding . . . . .	426
22.3	<b>Model-Based Coding</b> . . . . .	426
22.3.1	Object-Based Coding . . . . .	427
22.3.2	Knowledge-Based and Semantic Coding . . . . .	428
22.4	<b>Exercises</b> . . . . .	429
<b>23</b>	<b>VIDEO COMPRESSION STANDARDS</b>	<b>432</b>
23.1	<b>The H.261 Standard</b> . . . . .	432
23.1.1	Input Image Formats . . . . .	433
23.1.2	Video Multiplex . . . . .	434
23.1.3	Video Compression Algorithm . . . . .	435
23.2	<b>The MPEG-1 Standard</b> . . . . .	440
23.2.1	Features . . . . .	440
23.2.2	Input Video Format . . . . .	441
23.2.3	Data Structure and Compression Modes . . . . .	441
23.2.4	Intraframe Compression Mode . . . . .	443
23.2.5	Interframe Compression Modes . . . . .	444
23.2.6	MPEG-1 Encoder and Decoder . . . . .	447
23.3	<b>The MPEG-2 Standard</b> . . . . .	448
23.3.1	MPEG-2 Macroblocks . . . . .	449
23.3.2	Coding Interlaced Video . . . . .	450
23.3.3	Scalable Extensions . . . . .	452
23.3.4	Other Improvements . . . . .	453
23.3.5	Overview of Profiles and Levels . . . . .	454
23.4	<b>Software and Hardware Implementations</b> . . . . .	455

<b>24 MODEL-BASED CODING</b>	<b>457</b>
24.1 <b>General Object-Based Methods</b>	457
24.1.1 2-D/3-D Rigid Objects with 3-D Motion	458
24.1.2 2-D Flexible Objects with 2-D Motion	460
24.1.3 Affine Transformations with Triangular Meshes	462
24.2 <b>Knowledge-Based and Semantic Methods</b>	464
24.2.1 General Principles	465
24.2.2 MBASIC Algorithm	470
24.2.3 Estimation Using a Flexible Wireframe Model	471
24.3 <b>Examples</b>	478
<b>25 DIGITAL VIDEO SYSTEMS</b>	<b>486</b>
25.1 <b>Videoconferencing</b>	487
25.2 <b>Interactive Video and Multimedia</b>	488
25.3 <b>Digital Television</b>	489
25.3.1 Digital Studio Standards	490
25.3.2 Hybrid Advanced TV Systems	491
25.3.3 All-Digital TV	493
25.4 <b>Low-Bitrate Video and Videophone</b>	497
25.4.1 The ITU Recommendation H.263	498
25.4.2 The ISO MPEG-4 Requirements	499
 <b>APPENDICES</b>	
<b>A MARKOV AND GIBBS RANDOM FIELDS</b>	<b>502</b>
A.1 <b>Definitions</b>	502
A.1.1 Markov Random Fields	503
A.1.2 Gibbs Random Fields	504
A.2 <b>Equivalence of MRF and GRF</b>	505
A.3 <b>Local Conditional Probabilities</b>	506
<b>B BASICS OF SEGMENTATION</b>	<b>508</b>
B.1 <b>Thresholding</b>	508
B.1.1 Finding the Optimum Threshold(s)	509
B.2 <b>Clustering</b>	510
B.3 <b>Bayesian Methods</b>	512
B.3.1 The MAP Method	513
B.3.2 The Adaptive MAP Method	515
B.3.3 Vector Field Segmentation	516
<b>C KALMAN FILTERING</b>	<b>518</b>
C.1 <b>Linear State-Space Model</b>	518
C.2 <b>Extended Kalman Filtering</b>	520
