ERRATUM

"Efficient dual simplex algorithms for the assignment problem" by D. Goldfarb

[*Mathematical Programming* 33 (1985) 187–203]

It is incorrectly stated (page 187, 3rd line from bottom and page 190, 6th line from bottom) that Balinski gave a worst-case computational bound of $O(n^4)$ for his 'signature' method for the assignment problem in [1]. The correct bound for his method is $O(n^3)$, and this is clearly stated in [1]. The bound of $O(n^4)$ attributed to Balinski was based upon an earlier version of [1].
