
ELECTRIC POWER DISTRIBUTION HANDBOOK

T.A. SHORT

CRC PRESS

Boca Raton London New York Washington, D.C.

Contents

1	Fundamentals of Distribution Systems	1
1.1	Primary Distribution Configurations	4
1.2	Urban Networks.....	9
1.3	Primary Voltage Levels.....	12
1.4	Distribution Substations	17
1.5	Subtransmission Systems	20
1.6	Differences between European and North American Systems.....	22
1.7	Loads.....	26
1.8	The Past and the Future	28
	References.....	30
2	Overhead Lines	33
2.1	Typical Constructions.....	33
2.2	Conductor Data	38
2.3	Line Impedances	43
2.4	Simplified Line Impedance Calculations	51
2.5	Line Impedance Tables.....	57
2.6	Conductor Sizing	57
2.7	Ampacities.....	61
2.7.1	Neutral Conductor Sizing	71
2.8	Secondaries	73
2.9	Fault Withstand Capability	74
2.9.1	Conductor Annealing.....	75
2.9.2	Burndowns.....	77
2.10	Other Overhead Issues.....	83
2.10.1	Connectors and Splices.....	83
2.10.2	Radio Frequency Interference.....	86
	References.....	88
3	Underground Distribution.....	91
3.1	Applications.....	91
3.1.1	Underground Residential Distribution (URD)	92
3.1.2	Main Feeders	94
3.1.3	Urban Systems.....	94
3.1.4	Overhead vs. Underground	95
3.2	Cables.....	98
3.2.1	Cable Insulation	99
3.2.2	Conductors.....	104

3.2.3	Neutral or Shield	104
3.2.4	Semiconducting Shields.....	106
3.2.5	Jacket.....	107
3.3	Installations and Configurations.....	108
3.4	Impedances	111
3.4.1	Resistance	111
3.4.2	Impedance Formulas.....	114
3.4.3	Impedance Tables.....	121
3.4.4	Capacitance	121
3.5	Ampacity	123
3.6	Fault Withstand Capability	136
3.7	Cable Reliability	139
3.7.1	Water Trees.....	139
3.7.2	Other Failure Modes	142
3.7.3	Failure Statistics	144
3.8	Cable Testing	147
3.9	Fault Location.....	148
	References.....	153
4	Transformers	159
4.1	Basics.....	159
4.2	Distribution Transformers	164
4.3	Single-Phase Transformers	166
4.4	Three-Phase Transformers.....	174
4.4.1	Grounded Wye – Grounded Wye.....	179
4.4.2	Delta – Grounded Wye.....	183
4.4.3	Floating Wye – Delta.....	183
4.4.4	Other Common Connections	185
4.4.4.1	Delta – Delta	185
4.4.4.2	Open Wye – Open Delta.....	186
4.4.4.3	Other Suitable Connections	189
4.4.5	Neutral Stability with a Floating Wye	189
4.4.6	Sequence Connections of Three-Phase Transformers	191
4.5	Loadings.....	191
4.6	Losses.....	197
4.7	Network Transformers.....	201
4.8	Substation Transformers.....	202
4.9	Special Transformers	206
4.9.1	Autotransformers.....	206
4.9.2	Grounding Transformers	207
4.10	Special Problems	210
4.10.1	Paralleling	210
4.10.2	Ferroresonance	211
4.10.3	Switching Floating Wye – Delta Banks.....	220
4.10.4	Backfeeds.....	223

4.10.5	Inrush.....	226
References.....		229
5	Voltage Regulation.....	233
5.1	Voltage Standards	233
5.2	Voltage Drop	236
5.3	Regulation Techniques	238
5.3.1	Voltage Drop Allocation and Primary Voltage Limits.....	238
5.3.2	Load Flow Models	240
5.3.3	Voltage Problems	242
5.3.4	Voltage Reduction.....	243
5.4	Regulators	245
5.4.1	Line-Drop Compensation	249
5.4.1.1	Load-Center Compensation	250
5.4.1.2	Voltage-Spread Compensation	253
5.4.1.3	Effects of Regulator Connections	257
5.4.2	Voltage Override	258
5.4.3	Regulator Placement	258
5.4.4	Other Regulator Issues.....	259
5.5	Station Regulation.....	260
5.5.1	Parallel Operation.....	261
5.5.2	Bus Regulation Settings	262
5.6	Line Loss and Voltage Drop Relationships	262
References.....		266
6	Capacitor Application	269
6.1	Capacitor Ratings.....	273
6.2	Released Capacity	276
6.3	Voltage Support.....	277
6.4	Reducing Line Losses.....	280
6.4.1	Energy Losses.....	283
6.5	Switched Banks	284
6.6	Local Controls.....	286
6.7	Automated Controls.....	288
6.8	Reliability	290
6.9	Failure Modes and Case Ruptures.....	291
6.10	Fusing and Protection	295
6.11	Grounding.....	307
References.....		309
7	Faults	311
7.1	General Fault Characteristics.....	311
7.2	Fault Calculations	317
7.2.1	Transformer Connections	322
7.2.2	Fault Profiles.....	323

7.2.3	Effect of X/R Ratio	326
7.2.4	Secondary Faults.....	329
7.2.5	Primary-to-Secondary Faults	331
7.2.6	Underbuilt Fault to a Transmission Circuit	335
7.2.7	Fault Location Calculations	338
7.3	Limiting Fault Currents	342
7.4	Arc Characteristics.....	343
7.5	High-Impedance Faults.....	349
7.6	External Fault Causes.....	353
7.6.1	Trees	353
7.6.2	Weather and Lightning.....	360
7.6.3	Animals.....	361
7.6.4	Other External Causes	362
7.7	Equipment Faults.....	363
7.8	Faults in Equipment.....	364
7.9	Targeted Reduction of Faults.....	368
	References.....	370
8	Short-Circuit Protection	375
8.1	Basics of Distribution Protection.....	375
8.1.1	Reach.....	376
8.1.2	Inrush and Cold-Load Pickup.....	377
8.2	Protection Equipment.....	380
8.2.1	Circuit Interrupters.....	380
8.2.2	Circuit Breakers.....	382
8.2.3	Circuit Breaker Relays.....	384
8.2.4	Reclosers.....	386
8.2.5	Expulsion Fuses	388
8.2.5.1	Fuse Cutouts.....	392
8.2.6	Current-Limiting Fuses.....	398
8.3	Transformer Fusing	401
8.4	Lateral Tap Fusing and Fuse Coordination.....	407
8.5	Station Relay and Recloser Settings.....	408
8.6	Coordinating Devices.....	410
8.6.1	Expulsion Fuse–Expulsion Fuse Coordination.....	410
8.6.2	Current-Limiting Fuse Coordination.....	412
8.6.3	Recloser–Expulsion Fuse Coordination	413
8.6.4	Recloser–Recloser Coordination.....	416
8.6.5	Coordinating Instantaneous Elements	416
8.7	Fuse Saving vs. Fuse Blowing	417
8.7.1	Industry Usage.....	419
8.7.2	Effects on Momentary and Sustained Interruptions.....	419
8.7.3	Coordination Limits of Fuse Saving.....	420
8.7.4	Long-Duration Faults and Damage with Fuse Blowing.....	422

- 8.7.5 Long-Duration Voltage Sags with Fuse Blowing 423
- 8.7.6 Optimal Implementation of Fuse Saving..... 424
- 8.7.7 Optimal Implementation of Fuse Blowing..... 425
- 8.8 Other Protection Schemes 425
 - 8.8.1 Time Delay on the Instantaneous Element (Fuse Blowing)..... 425
 - 8.8.2 High-Low Combination Scheme 426
 - 8.8.3 SCADA Control of the Protection Scheme 427
 - 8.8.4 Adaptive Control by Phases 428
- 8.9 Reclosing Practices..... 428
 - 8.9.1 Reclose Attempts and Dead Times 429
 - 8.9.2 Immediate Reclose..... 432
 - 8.9.2.1 Effect on Sensitive Residential Devices..... 433
 - 8.9.2.2 Delay Necessary to Avoid Retripping Faults..... 434
 - 8.9.2.3 Reclose Impacts on Motors 435
- 8.10 Single-Phase Protective Devices..... 436
 - 8.10.1 Single-Phase Reclosers with Three-Phase Lockout..... 438
- References..... 438

9 Reliability 441

- 9.1 Reliability Indices..... 441
 - 9.1.1 Customer-Based Indices 441
 - 9.1.2 Load-Based Indices..... 445
- 9.2 Storms and Weather 446
- 9.3 Variables Affecting Reliability Indices..... 450
 - 9.3.1 Circuit Exposure and Load Density 450
 - 9.3.2 Supply Configuration..... 451
 - 9.3.3 Voltage 452
 - 9.3.4 Long-Term Reliability Trends 453
- 9.4 Modeling Radial Distribution Circuits..... 455
- 9.5 Parallel Distribution Systems..... 457
- 9.6 Improving Reliability 461
 - 9.6.1 Identify and Target Fault Causes 462
 - 9.6.2 Identify and Target Circuits 463
 - 9.6.3 Switching and Protection Equipment 463
 - 9.6.4 Automation..... 467
 - 9.6.5 Maintenance and Inspections 469
 - 9.6.6 Restoration 471
 - 9.6.7 Fault Reduction 474
- 9.7 Interruption Costs..... 474
- References..... 476

10 Voltage Sags and Momentary Interruptions..... 479

- 10.1 Location..... 480

10.2	Momentary Interruptions	482
10.3	Voltage Sags	485
10.3.1	Effect of Phases	491
10.3.2	Load Response	491
10.3.3	Analysis of Voltage Sags.....	493
10.4	Characterizing Sags and Momentaries	494
10.4.1	Industry Standards	494
10.4.2	Characterization Details	496
10.5	Occurrences of Voltage Sags	497
10.5.1	Site Power Quality Variations	499
10.5.2	Transmission-Level Power Quality.....	502
10.6	Correlations of Sags and Momentaries.....	502
10.7	Factors That Influence Sag and Momentary Rates	503
10.7.1	Location	504
10.7.2	Load Density	506
10.7.3	Voltage Class.....	507
10.7.4	Comparison and Ranking of Factors.....	507
10.8	Prediction of Quality Indicators Based on Site Characteristics	509
10.9	Equipment Sensitivities	511
10.9.1	Computers and Electronic Power Supplies.....	511
10.9.2	Industrial Processes and Equipment	515
10.9.2.1	Relays and Contactors	516
10.9.2.2	Adjustable-Speed Drives	519
10.9.2.3	Programmable-Logic Controllers	521
10.9.3	Residential Equipment.....	521
10.10	Solution Options	521
10.10.1	Utility Options for Momentary Interruptions	521
10.10.2	Utility Options for Voltage Sags.....	524
10.10.2.1	Raising the Nominal Voltage	525
10.10.2.2	Line Reactors	525
10.10.2.3	Neutral Reactors	526
10.10.2.4	Current-Limiting Fuses.....	527
10.10.3	Utility Options with Nontraditional Equipment.....	528
10.10.3.1	Fast Transfer Switches.....	528
10.10.3.2	DVRs and Other Custom-Power Devices.....	529
10.10.4	Customer/Equipment Solutions	531
10.11	Power Quality Monitoring	532
	References.....	534
11	Other Power Quality Issues	539
11.1	Overvoltages and Customer Equipment Failures	539
11.1.1	Secondary/Facility Grounding.....	541
11.1.2	Reclose Transients.....	543
11.2	Switching Surges.....	544
11.2.1	Voltage Magnification	548

11.2.2	Tripping of Adjustable-Speed Drives	550
11.2.3	Prevention of Capacitor Transients.....	551
11.3	Harmonics	552
11.3.1	Resonances	559
11.3.2	Telephone Interference	561
11.4	Flicker.....	565
11.4.1	Flicker Solutions.....	573
11.4.1.1	Load Changes.....	573
11.4.1.2	Series Capacitor.....	575
11.4.1.3	Static Var Compensator	578
11.4.1.4	Other Solutions	579
11.5	Voltage Unbalance	580
	References.....	583
12	Lightning Protection.....	587
12.1	Characteristics	588
12.2	Incidence of Lightning.....	596
12.3	Traveling Waves.....	598
12.4	Surge Arresters.....	602
12.4.1	Ratings and Selection.....	606
12.4.2	Housings	608
12.4.3	Other Technologies	609
12.4.4	Isolators	610
12.4.5	Arrester Reliability and Failures.....	611
12.5	Equipment Protection.....	614
12.5.1	Equipment Insulation.....	615
12.5.2	Protective Margin.....	616
12.5.3	Secondary-Side Transformer Failures.....	618
12.6	Underground Equipment Protection.....	621
12.6.1	Open Point Arrester	622
12.6.2	Scout Arresters	626
12.6.3	Tapped Cables	626
12.6.4	Other Cable Failure Modes.....	628
12.7	Line Protection	631
12.7.1	Induced Voltages.....	631
12.7.2	Insulation.....	633
12.7.2.1	Practical Considerations	635
12.7.3	Shield Wires	637
12.7.4	Line Protection Arresters.....	638
12.8	Other Considerations	642
12.8.1	Role of Grounding.....	642
12.8.2	Burndowns.....	642
12.8.3	Crossarm and Pole Damage and Bonding.....	643
12.8.4	Arc Quenching of Wood.....	643
	References.....	645

13	Grounding and Safety	651
13.1	System Grounding Configurations.....	651
13.1.1	Four-Wire Multigrounded Systems.....	651
13.1.2	Other Grounding Configurations.....	653
13.2	System Grounding and Neutral Shifts During Ground Faults.....	654
13.2.1	Neutral Shifts on Multigrounded Systems.....	657
13.2.2	Neutral Reactor.....	661
13.2.3	Overvoltages on Ungrounded Systems.....	662
13.3	Equipment/Customer Grounding.....	665
13.3.1	Special Considerations on Ungrounded Systems.....	667
13.3.2	Secondary Grounding Problems.....	667
13.4	Ground Rods and Other Grounding Electrodes.....	668
13.4.1	Soil Characteristics.....	670
13.4.2	Corrosion and Grounding Electrodes.....	674
13.4.3	Resistance Measurements.....	676
13.5	Shocks and Stray Voltages.....	679
13.5.1	Biological Models.....	679
13.5.2	Step and Touch Potentials.....	682
13.5.3	Stray Voltage.....	685
13.5.4	Tree Contacts.....	689
13.6	Protective Grounding.....	692
	References.....	695
14	Distributed Generation	699
14.1	Characteristics of Distributed Generators.....	701
14.1.1	Energy Sources.....	701
14.1.2	Synchronous Generators.....	702
14.1.3	Induction Generators.....	707
14.1.4	Inverters.....	708
14.1.5	Modeling Small Generators.....	709
14.2	Islanding Issues.....	711
14.2.1	Effect of Transformer Connections on Overvoltages.....	712
14.2.1.1	Overvoltage Relays and 59G Ground Fault Detection.....	714
14.2.1.2	Effectively Grounding a Grounded-Wye – Grounded-Wye Transformer Connection.....	716
14.2.1.3	Sizing a Neutral Grounding Reactor on a Grounded-Wye – Delta Connection to Maintain Effective Grounding.....	716
14.2.2	Anti-Islanding Protection.....	717
14.2.3	Active Anti-Islanding.....	718
14.2.4	Relaying Issues.....	719
14.2.5	Self-Excitation.....	723
14.2.6	Ferroresonance.....	725
14.2.7	Backfeed to a Downed Conductor and Backfeed	

	Voltages.....	726
14.3	Protection Issues	727
	14.3.1 Tradeoff Between Overvoltages and Ground Fault Current.....	731
	14.3.2 Fuse Saving Coordination	732
14.4	Power Quality Impacts	734
	14.4.1 Voltage Regulation.....	734
	14.4.2 Harmonics.....	739
	14.4.3 Flicker	740
	14.4.4 Other Impacts on Power Quality.....	743
	14.4.5 High Quality Power Configurations	743
14.5	Generator Reliability	744
	References.....	748
	Index	751
