9 Pulsed Electromagnetic and Optical Beam Wavefields in Temporally Dispersive Media	1
9.1 Angular Spectrum Representation	2
9.1.1 Real Direction Cosine Form of the Angular Spectrum of Plane Waves Representation	6
9.1.2 Electromagnetic Energy Flow in the Angular Spectrum Representation	9
9.1.3 Homogeneous and Evanescent Plane Wave Contributions to the Angular Spectrum Representation	10
9.1.4 Paraxial Approximation of the Angular Spectrum of Plane Waves Representation	17
9.2 Angular Spectrum Representation of Multipole Wavefields	23
9.2.1 Multipole Expansion of the Scalar Optical Wavefield due to a Localized Source Distribution	30
9.2.2 Multipole Expansion of the Electromagnetic Wavefield Generated by a Localized Charge–Current Distribution in a Dispersive Dielectric Medium	37
9.3 Stationary Phase Asymptotic Approximations of the Angular Spectrum Representation in Free-Space	50
9.3.1 Approximations Valid Over a Hemisphere	54
9.3.2 Approximations Valid on the Plane $z = z_0$	58
9.3.3 Asymptotic Approximations of $\tilde{U}_H(\mathbf{r}, \omega)$ and $\tilde{U}_E(\mathbf{r}, \omega)$	66
9.3.4 Summary	69
9.4 Separable Pulsed Beam Wavefields	70
9.4.1 Gaussian Beam Propagation	75
9.4.2 Asymptotic Behavior	79
9.5 The Inverse Initial Value Problem	79
9.5.1 The Direct Problem	83
9.5.2 The Inverse Problem	85
9.6 Summary	88
References	88
Problems	91

10 Asymptotic Methods of Analysis using Advanced Saddle Point Techniques	95
10.1 Olver's Saddle Point Method	98
10.1.1 Peak Value of the Integrand at the Endpoint of Integration	98
10.1.2 Peak Value of the Integrand at an Interior Point of the Path of Integration	101
10.1.3 The Application of Olver's Saddle Point Method	103
10.2 Uniform Asymptotic Expansion for Two First-Order Saddle Points at Infinity	105
10.3 Uniform Asymptotic Expansion for Two First-Order Saddle Points	110
10.3.1 The Uniform Asymptotic Expansion for Two Isolated First-Order Saddle Points	111
10.3.2 The Uniform Asymptotic Expansion for Two Neighboring First-Order Saddle Points	113
10.3.3 The Transitional Asymptotic Approximation for Two Neighboring First-Order Saddle Points	125
10.4 Uniform Asymptotic Expansion for a First-Order Saddle Point and a Simple Pole Singularity	125
10.4.1 The Complementary Error Function	131
10.4.2 Asymptotic Behavior for a Single Interacting Saddle Point	135
10.4.3 Asymptotic Behavior for Two Isolated Interacting Saddle Points	139
10.5 Asymptotic Expansions of Multiple Integrals	141
10.5.1 Absolute Maximum in the Interior of the Closure of \mathcal{D}_ξ	141
10.5.2 Absolute Maximum on the Boundary of the Closure of \mathcal{D}_ξ	142
10.6 Summary	144
References	144
Problems	146
11 The Group Velocity Approximation	147
11.1 Historical Introduction	147
11.2 The Pulsed Plane Wave Electromagnetic Field	152
11.2.1 The Delta Function Pulse and the Impulse Response of the Medium	160
11.2.2 The Heaviside Unit Step Function Signal	161
11.2.3 The Double Exponential Pulse	163
11.2.4 The Rectangular Pulse Envelope Modulated Signal	163
11.2.5 The Trapezoidal Pulse Envelope Modulated Signal	165
11.2.6 The Hyperbolic Tangent Envelope Modulated Signal	169

11.2.7	The Van Bladel Envelope Modulated Pulse	174
11.2.8	The Gaussian Envelope Modulated Pulse	177
11.3	Wave Equations in a Simple Dispersive Medium and the Slowly Varying Envelope Approximation.....	178
11.3.1	The Dispersive Wave Equations	179
11.3.2	The Slowly Varying Envelope Approximation.....	180
11.3.3	Dispersive Wave Equations for the Slowly Varying Wave Amplitude and Phase.....	185
11.4	The Classical Group Velocity Approximation	194
11.5	Failure of the Classical Group Velocity Method.....	200
11.5.1	Impulse Response of a Double-Resonance Lorentz Model Dielectric	209
11.5.2	Heaviside Unit Step Function Signal Evolution.....	212
11.5.3	Rectangular Envelope Pulse Evolution	214
11.5.4	Van Bladel Envelope Pulse Evolution	215
11.5.5	Concluding Remarks on the Slowly Varying Envelope and Classical Group Velocity Approximations....	222
11.6	Extensions of the Group Velocity Method	223
11.7	Localized Pulsed-Beam Propagation	231
11.7.1	Mathematical Preliminaries	232
11.7.2	Paraxial Asymptotics	234
11.8	The Necessity of an Asymptotic Description	244
	References.....	245
