

# **Electrophilic Aromatic Substitution**

**R. TAYLOR**

*Reader in Chemistry, University of Sussex*

**JOHN WILEY & SONS**

Chichester • New York • Brisbane • Toronto • Singapore

# Contents

<b>Chapter 1 Introduction . . . . .</b>	<b>1</b>
1.1 The Structure and Stability of Aromatic Compounds . . . . .	1
1.2 Types of Compounds . . . . .	4
1.3 Types of Substitution . . . . .	6
1.4 The Polar Effects of Substituents . . . . .	8
1.4.1 Inductive and Field Effects . . . . .	8
1.4.2 The Resonance Polar Effect . . . . .	11
1.4.3 Hyperconjugation . . . . .	15
1.4.4 The Hammett Equation . . . . .	19
1.4.5 Conclusions . . . . .	22
<b>Chapter 2 The Mechanism of Electrophilic Aromatic Substitution . . . . .</b>	<b>25</b>
2.1 Reaction of the Reagent with the Aromatic Nucleus . . . . .	25
2.1.1 Isolation of Intermediates . . . . .	26
2.1.2 Nature of the Intermediate Complexes . . . . .	29
2.1.3 Kinetic Isotope Effects . . . . .	32
2.2 The Theory of Reaction Rates . . . . .	34
2.2.1 The Isolated Molecule Method . . . . .	34
2.2.2 The Localization Energy Method . . . . .	36
2.3 Partial Rate Factors . . . . .	40
2.4 The Electronic Effects of Substituents . . . . .	41
2.4.1 Alkyl Groups . . . . .	43
2.4.2 Positively Charged Substituents . . . . .	44
2.4.3 Substituents with Dipolar Double or Triple Bonds . . . . .	44
2.4.4 Substituents in which the Atom Bonded to Benzene has an Unshared Pair of Electrons . . . . .	45
2.4.5 Substituents Possessing a Vacant Atomic Orbital . . . . .	48
2.4.6 Substituted Methyl Groups . . . . .	48
2.4.7 Biphenyl Bi- and Polycyclic Systems . . . . .	49
2.4.8 Two or More Substituents . . . . .	50
2.4.9 Summary . . . . .	51

2.5 The Steric Effects of Substituents and Electrophiles . . . . .	52
2.5.1 Steric Hindrance . . . . .	52
2.5.2 Steric Acceleration . . . . .	53
2.6 The Effect of Strain . . . . .	53
2.7 The Effect of Electrophile Reactivity on Orientation and Aromatic Reactivity . . . . .	55
2.8 Reversibility and Rearrangement . . . . .	56
2.8.1 Reversibility . . . . .	56
2.8.2 Rearrangement . . . . .	56
2.9 Mechanisms Involving Migration of the Electrophile from a Side-chain . . . . .	57
2.10 Microscopic and Macroscopic Diffusion Control of Relative Reactivities . . . . .	57
<b>Chapter 3 Hydrogen Exchange . . . . .</b>	<b>61</b>
3.1 Acid-catalysed Hydrogen Exchange . . . . .	62
3.1.1 Mechanism of Exchange . . . . .	64
(i) Nature of the acid catalysis . . . . .	64
(ii) Intermediates . . . . .	64
(iii) Extent of proton transfer . . . . .	65
(iv) Isotope effects . . . . .	66
(v) Energy-barrier heights . . . . .	67
(vi) Variation of rates with temperature . . . . .	67
3.1.2 Substituent Effects . . . . .	68
3.1.2.1 Alkyl substituents . . . . .	68
3.1.2.2 Polyalkyl substituents . . . . .	74
3.1.2.3 Cyclic alkyl substituents: the Mills–Nixon effect .	76
3.1.2.4 Substituted alkyl substituents . . . . .	80
3.1.2.5 Halogen substituents . . . . .	84
3.1.2.6 Polysubstituted aromatics containing a halogen substituent . . . . .	86
3.1.2.7 Oxygen- and sulphur-containing substituents .	88
3.1.2.8 Substituted <i>N,N</i> -dialkylanilines . . . . .	89
3.1.2.9 Substituted acetophenones . . . . .	90
3.1.2.10 Biphenyl and related compounds . . . . .	90
3.1.2.11 Atropisomers . . . . .	95
3.1.2.12 Polycyclic aromatics . . . . .	96
(i) Annelation . . . . .	97
(ii) Positional reactivity orders . . . . .	102
(iii) The effect of benzene ring distortion . . . . .	103
(iv) Silver-complex formation . . . . .	104
3.1.2.13 Substituted polycyclic aromatics . . . . .	104
(i) Prediction of isomer yields in other reactions	105

(ii) Conjugated vs non-conjugated sites . . . . .	105
(iii) Bond fixation . . . . .	105
(iv) Number of sites for delocalization of charge . . . . .	110
(v) The effect of <i>i,j</i> - vs <i>j,i</i> -substituent-site interactions . . . . .	112
(vi) Additivity of methyl substituent effects . . . . .	112
(vii) Substitution at an enclosed site . . . . .	114
(viii) Tritium migration during exchange . . . . .	115
3.1.2.14 Long-range substituent effects . . . . .	116
3.1.2.15 Metal-containing substituents . . . . .	117
3.1.2.16 Annulenes . . . . .	117
3.2 Gas-phase Hydrogen Exchange . . . . .	118
3.3 Base-catalysed Hydrogen Exchange . . . . .	119
<b>Chapter 4 The Replacement of a Substituent by Hydrogen. . . . .</b>	<b>130</b>
4.1 Protiodeauration . . . . .	131
4.2 Protiodemagnesiation . . . . .	131
4.3 Protiodemercuriation . . . . .	132
4.4 Protiodeboronation . . . . .	134
4.5 Protiodealkylation . . . . .	136
4.6 Protiodecarbonylation . . . . .	139
4.6.1 Protiodeacylation . . . . .	139
4.6.2 Protiodecarboxylation. . . . .	141
4.7 Protiodesilylation . . . . .	143
4.7.1 Acid-catalysed Protiodesilylation . . . . .	143
(i) Mechanism . . . . .	143
(ii) Substituent effects . . . . .	144
(iii) Substituent effects in biphenyl . . . . .	151
(iv) Substituent effects in 1,6-methano[10]annulene . . . . .	152
(v) Additivity effects . . . . .	152
(vi) Steric hindrance to protiodesilylation of alkylferrocenes	153
4.7.2 Base-catalysed Protiodesilylation . . . . .	154
4.8 Protiodegermylation . . . . .	156
4.8.1 Acid-catalysed Protiodegermylation . . . . .	156
4.8.2 Base-catalysed Protiodegermylation . . . . .	158
4.9 Protiodestannylation. . . . .	158
4.9.1 Acid-catalysed Protiodestannylation . . . . .	158
4.9.2 Base-catalysed Protiodestannylation . . . . .	161
4.10 Protiodeplumbylation . . . . .	163
4.11 Protiodenitration . . . . .	163
4.12 Protiodesulphonation . . . . .	164
4.13 Protiodehalogenation . . . . .	165
4.14 Protodepalladiation . . . . .	167

<b>Chapter 5 Metallation . . . . .</b>	<b>173</b>
5.1 Lithiation . . . . .	173
5.2 Auration . . . . .	175
5.3 Mercuriation . . . . .	175
5.3.1 Mechanism . . . . .	176
5.3.2 Substituent Effects . . . . .	178
5.4 Boronation . . . . .	181
5.5 Thalliation . . . . .	181
5.6 Silylation . . . . .	182
5.7 Plumbylation . . . . .	182
5.8 Antimonation . . . . .	183
5.9 Telluriation . . . . .	184
5.10 Rhodiation . . . . .	184
5.11 Palladiation . . . . .	184
<b>Chapter 6 Reactions Involving Electrophilic Carbon . . . . .</b>	<b>187</b>
6.1 Alkylation . . . . .	188
6.1.1 Mechanism of Alkylation by Alkyl Halides . . . . .	189
(i) Formation of complexes . . . . .	189
(ii) Rearrangements . . . . .	191
(iii) Kinetics . . . . .	196
(a) Kinetic effect of solvents . . . . .	196
(b) Studies in nitrobenzene and 1,2-dichloroethane .	197
(c) Studies in nitromethane . . . . .	198
(d) Studies in non-polar solvents . . . . .	200
6.1.2 Mechanism of Alkylation by Other Reagents . . . . .	201
(i) Alkylation by alcohols . . . . .	201
(ii) Alkylation by alkenes . . . . .	202
(iii) Alkylation by cycloalkanes . . . . .	203
(iv) Alkylation by ethers . . . . .	203
(v) Alkylation by esters, acids, acid halides, and sulphones . . . . .	204
(vi) Alkylation by other reagents . . . . .	205
(vii) Alkylation in the gas phase . . . . .	206
6.1.3 Substituent Effects . . . . .	208
6.1.4 Cyclalkylation . . . . .	209
6.1.5 Claisen Rearrangement . . . . .	214
6.2 Arylation . . . . .	214
6.3 Aminoalkylation . . . . .	217
6.4 Hydroxyalkylation . . . . .	217
6.5 Alkylthioalkylation . . . . .	218
6.6 Haloalkylation . . . . .	219
6.7 Friedel-Crafts Acylation . . . . .	222

6.7.1	Mechanism of Acylation by Acyl Halides . . . . .	222
(i)	Formation of $\sigma$ -complexes . . . . .	222
(ii)	The electrophilic species . . . . .	223
(iii)	Kinetics . . . . .	224
(a)	The order in reagents and their relative reactivities . . . . .	224
(b)	The kinetic effect of solvents. . . . .	226
6.7.2	Mechanism of Acylation by Other Reagents . . . . .	227
(i)	Acylation by carboxylic anhydrides, esters, amides, and acids . . . . .	227
(ii)	Acylation by acylium salts . . . . .	227
(iii)	Acylation by ketene . . . . .	228
(iv)	Acylation with phosgene . . . . .	228
(v)	Formylation . . . . .	228
(vi)	Acylation in the gas phase . . . . .	229
6.7.3	Substituent Effects . . . . .	229
6.7.4	Cyclacylation . . . . .	236
6.7.5	Fries Rearrangement . . . . .	237
6.8	Formylation. . . . .	238
6.8.1	Gattermann–Koch Reaction . . . . .	238
6.8.2	Gattermann Reaction . . . . .	239
6.8.3	Vilsmeier–Haack Reaction . . . . .	239
6.8.4	Formylation with Dichloromethyl Alkyl Ethers . . . . .	240
6.8.5	Formylation with Formyl Fluoride . . . . .	241
6.8.6	Substituent Effects in Formylation . . . . .	242
6.9	The Hoesch Reaction . . . . .	242
6.10	Carboxylation and Amidation . . . . .	243
6.11	Cyanation . . . . .	245
6.12	The Kolbe–Schmitt and Reimer–Tiemann Reactions . . . . .	246
<b>Chapter 7</b>	<b>Reactions Involving Nitrogen Electrophiles . . . . .</b>	<b>256</b>
7.1	Amination . . . . .	256
7.2	Diazonium Coupling. . . . .	258
7.3	Nitrosation . . . . .	261
7.3.1	Nitrosation with Nitrous Acid . . . . .	261
7.3.2	Nitrosation with Nitrosonium Compounds . . . . .	262
7.3.3	The Fischer–Hepp Rearrangement . . . . .	262
7.4	Nitration. . . . .	263
7.4.1	Conditions of Nitration . . . . .	263
(i)	Nitration by nitric acid . . . . .	264
(ii)	Nitration by nitric acid in strong mineral acids . . . . .	265
(iii)	Nitration by nitric acid in organic solvents . . . . .	268
(iv)	Nitration by nitric acid in acetic anhydride . . . . .	269

(v) Nitration by acyl nitrates in organic solvents . . . . .	271
(vi) Nitration by dinitrogen tetroxide and dinitrogen pentoxide . . . . .	272
(vii) Nitration by nitronium salts . . . . .	273
(viii) Nitration by nitroalkanes, alkyl nitrates, and metal nitrates . . . . .	274
(ix) Nitration via nitrosation . . . . .	275
(a) The anti-catalytic effect . . . . .	275
(b) The catalytic effect . . . . .	276
(x) Nitration with nitrocyclohexadienones . . . . .	277
(xi) Nitration with pernitric acid and nitryl halides . . . . .	278
(xii) Gas-phase nitration . . . . .	278
<b>7.4.2 Mechanism of Nitration . . . . .</b>	<b>278</b>
(i) Isotope effects . . . . .	278
(ii) Electron-transfer mechanism . . . . .	279
(iii) <i>Ipsò</i> substitution . . . . .	280
<b>7.4.3 Substituent Effects . . . . .</b>	<b>284</b>
(i) Simple alkyl substituents . . . . .	284
(ii) Bulky alkyl substituents . . . . .	287
(iii) Cycloalkyl substituents . . . . .	287
(iv) Polyalkyl substituents . . . . .	290
(v) Cyclic alkyl substituents . . . . .	291
(vi) Substituted alkyl groups . . . . .	291
(vii) Substituted alkenyl and alkynyl groups . . . . .	293
(viii) Halogen substituents . . . . .	293
(ix) Polyhalogen substituents . . . . .	296
(x) Amines, anilides, and ethers . . . . .	297
(xi) Substituents containing boron and silicon . . . . .	301
(xii) Positive poles . . . . .	302
(xiii) Dipolar substituents . . . . .	307
(xiv) Polysubstituted aromatics . . . . .	307
(xv) Biphenyl and derivatives . . . . .	310
(xvi) Polycyclic aromatics . . . . .	311
(xvii) Miscellaneous aromatics . . . . .	313
<b>7.5 Nitramine Rearrangement . . . . .</b>	<b>314</b>
<b>7.6 Phosphonation . . . . .</b>	<b>315</b>
<b>Chapter 8 Oxygen, Sulphur, and Selenium Electrophiles . . . . .</b>	<b>327</b>
<b>8.1 Hydroxylation . . . . .</b>	<b>327</b>
8.1.1 Hydroxylation with Acidified Hydrogen Peroxide . . . . .	327
8.1.2 Hydroxylation with Peracids . . . . .	328
8.1.3 Miscellaneous Hydroxylating Reagents . . . . .	329
<b>8.2 Aroxylation . . . . .</b>	<b>330</b>

8.3	Benzoylation and Acetoxylation . . . . .	330
8.4	Sulphonoxylation . . . . .	331
8.5	Sulphenylation . . . . .	332
8.6	Thiocyanation . . . . .	333
8.7	Sulphinylation . . . . .	333
8.8	Sulphonylation . . . . .	334
8.8.1	Mechanism of Sulphonylation . . . . .	334
(i)	Sulphonylation in excess sulphonyl halide . . . . .	334
(ii)	Sulphonylation in the presence of solvents . . . . .	335
8.8.2	Substituent Effects . . . . .	336
8.9	Sulphonation . . . . .	337
8.9.1	Mechanism of Sulphonation . . . . .	337
(i)	Sulphonation by sulphur trioxide in aprotic solvents . . . . .	338
(ii)	Sulphonation by sulphuric acid . . . . .	339
(iii)	Sulphonation by halosulphonic acids . . . . .	341
8.9.2	Substituent Effects . . . . .	342
(i)	Alkyl substituents . . . . .	342
(ii)	Polyalkyl and cyclialkyl substituents . . . . .	343
(iii)	Substituted alkyl groups . . . . .	346
(iv)	Halogen substituents . . . . .	347
(v)	Sulphonic acids . . . . .	348
(vi)	Biphenyl and derivatives . . . . .	349
(vii)	Hydroxy, methoxy, and amino substituents . . . . .	350
(viii)	Polycyclics . . . . .	351
(ix)	Annulenes and ferrocene . . . . .	355
8.10	Selenocyanation . . . . .	355
8.11	Selenylation . . . . .	355
8.12	Selenonation . . . . .	356
<b>Chapter 9 Electrophilic Halogenation . . . . .</b>	<b>363</b>	
9.1	Fluorination . . . . .	363
9.2	Chlorination . . . . .	364
9.2.1	Chlorination by Hypochlorous Acid, its Esters, and Acetyl Derivative . . . . .	365
(i)	Hypochlorous acid . . . . .	365
(ii)	Esters of hypochlorous acid . . . . .	366
(iii)	The acetyl derivative of hypochlorous acid . . . . .	366
9.2.2	Chlorination by Molecular Chlorine . . . . .	367
(i)	Chlorine . . . . .	367
(ii)	Iodobenzene dichloride . . . . .	370
(iii)	<i>N</i> -Chloramines and <i>N</i> -chloroamides: the Orton rearrangement . . . . .	370
(iv)	Chlorine in the presence of a catalyst . . . . .	371

9.2.3	Chlorination with Sulphuryl Chloride . . . . .	372
9.2.4	Chlorination with Metal Halides . . . . .	373
9.2.5	Miscellaneous Chlorination Methods . . . . .	374
<b>9.3</b>	<b>Bromination . . . . .</b>	<b>374</b>
9.3.1	Bromination by Hypobromous Acid and its Acetyl Derivative . . . . .	374
(i)	Hypobromous acid . . . . .	374
(ii)	The acetyl derivative of hypobromous acid . . . . .	376
9.3.2	Bromination by Molecular Bromine . . . . .	376
(i)	Bromine . . . . .	377
(ii)	Bromine in the presence of a catalyst . . . . .	379
9.3.3	Bromination by Tribromide Ion . . . . .	380
9.3.4	Bromination by Bromine Phosphate . . . . .	380
9.3.5	Bromination by Bromine Sulphate . . . . .	380
9.3.6	Bromination by $\alpha$ -Bromoketones and Aluminium Halides	381
9.3.7	Bromination by <i>N</i> -Bromoamides . . . . .	381
9.3.8	Bromination with Interhalogens . . . . .	382
9.3.9	Bromination with Bromocyclohexadienones . . . . .	382
9.3.10	Isotope Effects in Bromination by Bromine . . . . .	382
9.3.11	Gas-phase Bromination . . . . .	384
9.3.12	Base-catalysed Bromination . . . . .	384
<b>9.4</b>	<b>Iodination . . . . .</b>	<b>385</b>
9.4.1	Iodination with Iodine . . . . .	385
9.4.2	Iodination with Iodine and an Oxidizing Agent . . . . .	386
9.4.3	Iodination with Iodine Acetate and Iodine Trifluoroacetate . . . . .	387
9.4.4	Iodination by Iodine Monochloride . . . . .	388
<b>9.5</b>	<b>Astatination . . . . .</b>	<b>388</b>
<b>9.6</b>	<b>Substituent Effects in Halogenation . . . . .</b>	<b>388</b>
9.6.1	Alkyl, Cyclic Alkyl, and Substituted Alkyl Groups . . . . .	388
9.6.2	Amines, Anilides, Ethers, and Esters . . . . .	392
9.6.3	Deactivating Substituents . . . . .	394
9.6.4	Substituents Containing Boron and Silicon . . . . .	396
9.6.5	Polysubstituted Benzenes . . . . .	397
9.6.6	Biphenyl and its Derivatives . . . . .	401
9.6.7	Naphthalene and Polycyclic Compounds . . . . .	404
<b>Chapter 10</b>	<b>The Replacement of a Substituent X by a Substituent Y . . . . .</b>	<b>413</b>
10.1	Silydelithiation . . . . .	414
10.2	Halodeauration . . . . .	415
10.3	Nitrosodemagnesiation . . . . .	415
10.4	Mercuridemercuration . . . . .	415
10.5	Plumbyldemercuration . . . . .	416

10.6	Nitrosodemercuriation . . . . .	417
10.7	Halodemercuriation . . . . .	417
10.8	Sulphodemercuriation . . . . .	417
10.9	Plumbyldeethalliation . . . . .	418
10.10	Nitrosodethalliation . . . . .	418
10.11	Nitrodethalliation . . . . .	418
10.12	Hydroxydethalliation . . . . .	419
10.13	Iododethalliation . . . . .	419
10.14	Mercurideboronation . . . . .	419
10.15	Thallideboronation . . . . .	420
10.16	Nitrodeboronation . . . . .	420
10.17	Hydroxydeboronation . . . . .	420
10.18	Halodeboronation . . . . .	421
10.19	Alkyldealkylation . . . . .	422
10.20	Acylddealkylation . . . . .	422
10.21	Diazodealkylation . . . . .	423
10.22	Nitrosodealkylation . . . . .	423
10.23	Nitrodealkylation . . . . .	423
10.24	Sulphodealkylation . . . . .	425
10.25	Halodealkylation . . . . .	425
10.26	Diazodeacylation . . . . .	426
10.27	Nitrosodeacylation and Nitrosodecarboxylation . . . . .	427
10.28	Nitrodeacylation and Nitrodecarboxylation . . . . .	427
10.29	Sulphodeacylation . . . . .	428
10.30	Halodeacylation and Halodecarboxylation . . . . .	428
10.31	Mercuridesilylation . . . . .	430
10.32	Thallidesilylation . . . . .	432
10.33	Alkyldesilylation . . . . .	432
10.34	Acyldesilylation . . . . .	433
10.35	Diazodesilylation . . . . .	434
10.36	Nitrosodesilylation and Nitrodesilylation . . . . .	434
10.37	Sulphodesilylation . . . . .	435
10.38	Halodesilylation . . . . .	435
10.39	Mercuridestannylation . . . . .	437
10.40	Acyldestannylation . . . . .	438
10.41	Nitrosodestannylation . . . . .	438
10.42	Halodestannylation . . . . .	438
10.43	Iododeplumbylation . . . . .	440
10.44	Diazonium Exchange . . . . .	440
10.45	Nitrosodearylazoniation . . . . .	441
10.46	Nitrodearylazoniation . . . . .	441
10.47	Bromodearylazoniation . . . . .	441
10.48	Diazodenitration . . . . .	441

10.49 Nitrodenitration (Nitro Exchange) . . . . .	442
10.50 Nitrodephosphonation . . . . .	442
10.51 Nitrodethiophenylation . . . . .	442
10.52 Diazodesulphonation . . . . .	442
10.53 Nitrodesulphonation . . . . .	443
10.54 Halodesulphonation . . . . .	443
10.55 Halodetelluriation. . . . .	445
10.56 Lithiodebromination. . . . .	445
10.57 Alkyldebromination . . . . .	445
10.58 Acyldehalogenation . . . . .	446
10.59 Diazodehalogenation . . . . .	446
10.60 Nitroso- or Nitrodehalogenation . . . . .	446
10.61 Phosphonodebromination . . . . .	448
10.62 Sulphodeiodination . . . . .	448
10.63 Halogen Exchange . . . . .	449
<b>Chapter 11 Quantitative Evaluation of Electronic and Steric Effects in Electrophilic Aromatic Substitution . . . . .</b>	<b>455</b>
11.1 Quantitative Treatments of Structure-Reactivity Relationships . . . . .	455
11.1.1 Selectivity . . . . .	470
11.1.2 Extensions of the Hammett Equation . . . . .	470
11.1.3 The Yukawa-Tsuno Equation . . . . .	471
11.1.4 The Electronic Effect of Bulky Groups: Steric Hindrance to Solvation . . . . .	477
11.1.5 The Reactivity of the Aromatic: the Reactivity-Selectivity Principle . . . . .	479
11.1.6 Theoretical Calculations of Aromatic Reactivities . . . . .	481
11.2 The <i>ortho:para</i> Ratio . . . . .	483
11.2.1 Selectivity . . . . .	483
11.2.2 Steric Hindrance and Steric Acceleration . . . . .	483
11.2.3 Interaction between Substituent and Reagent. . . . .	484
11.2.4 Electronic Effects . . . . .	485
11.2.5 The Effects of Solvent and Temperature . . . . .	490
11.3 Strain Effects . . . . .	490
11.4 <i>Ipsò</i> Factors. . . . .	491
<b>Index . . . . .</b>	<b>497</b>
