

Supplementary Information:

Enhancement of long stability of sulfur cathode by encapsulating sulfur into micropores of carbon spheres

B. Zhang, X. Qin, G. R. Li, X. P. Gao

Fig. S1. Discharge and charge curves of the sulfur-carbon sphere composites with 42 wt % S (a) and 51 wt % S (b) at the low current density of 40 mA/g. It is shown that there is no flat discharge plateau in Fig. S1b, because of the full saturation of the micropore volume of carbon spheres.
