### Contents

Preface	xiii
On Vector Quasi-Equilibrium Problems Oamrul Hasan Ansari and Jen-Chih Yao	1
1. Introduction	1
2. Preliminaries	3
3. Existence Results	6
4. Some Applications	10
References	15
The Log Quadratic Provinal Methodology in Convey On	
timization Algorithms and Variational Inequalities	10
timization Algorithms and Variational mequanties	15
Alfred Austender and Marc Teboulle	
1 Introduction	20
2 Lagrangians and Provimal Methods	21
2. The quadratic augmented Lagrangian	21
2.2. Provimal Minimization Algorithms	22
2.3. Entropic Provimal Methods and Modified Lagrangians	24
2.4. Difficulties with Entropic Provincel Methods	24
2.5. Toward Solutions to Difficulties	20
2.0. Toward bolations to Difficulties	20
3.1 The LO Function and its Conjugate: Basic Properties	29
3.2. The Logarithmic Quadratic Provinal Minimization	29
4 The LOP in Action	33
4. The Exprime LOP for Variational Inequalities over Deluhedra	22
4.1. I imma Logi for variational inequalities over rolyneura	00
4.2. Lagrangian Methods for convex optimization and variational	24
4.2 Dual and Primal Dual Decomposition ashaman	04
4.5. Dual and Frimal-Dual Decomposition sciences	30
4.4. Frimai Decomposition: Block Gauss-Seidel Schemes for Linearly	00
constrained Problems	39

4.5. Convex Feasibility Problems       41         4.6. Bundle Methods in Nonsmooth Optimization       43         References       45         The Continuum Model of Transportation Problem       53         Patrizia Daniele, Giovanna Idone and Antonino Maugeri       53         1. Introduction       53         2. Calculus of the solution       56         References       59         The Economic Model for Demand–Supply Problems       61         Patrizia Daniele and Antonino Maugeri       61         1. Introduction       61         2. The first phase: formalization of the equilibrium       62         3. The second phase: formalization of the equilibrium       62         4. Example       72         References       77         Constrained Problems of Calculus of Variations Via Penalization Technique       79         Vladimir F. Demyanov       79         1. Introduction       79         2. Statement of the problem       80         3. An equivalent statement of the problem       81         4. Local minima       83         5. Penalty functions       88         6.1. Properties of the function $\varphi$ 88         6.2. Properties of the function $\varphi$ 88         6.	vi	
4.6. Bundle Methods in Nonsmooth Optimization       43         References       45         The Continuum Model of Transportation Problem       53         Patrizia Daniele, Giovanna Idone and Antonino Maugeri       53         1. Introduction       53         2. Calculus of the solution       56         References       59         The Economic Model for Demand-Supply Problems       61         Patrizia Daniele and Antonino Maugeri       61         1. Introduction       61         2. The first phase: formalization of the equilibrium       62         3. The second phase: formalization of the equilibrium       62         4. The dependence of the second phase on the first one       70         5. General model       71         6. Example       72         References       77         Constrained Problems of Calculus of Variations Via Penalization Technique       79         Vladimir F. Demyanov       80         1. Introduction       79         2. Statement of the problem       80         3. An equivalent statement of the problem       81         4. Local minima       83         5. Penalty functions       88         6.1. Properties of the function $\varphi$ 88 <td< td=""><td>4.5 Convex Fessibility Problems</td><td>41</td></td<>	4.5 Convex Fessibility Problems	41
