Contents

Preface xiii

On the numerical solution of finite-dimensional variational inequalities by an interior point method 1

Stefania Bellavia and Maria Grazia Gasparo

1. Introduction 2
2. The IIPVI-method 4
3. Algorithmic issues 6
4. Numerical experiments 11
5. Conclusions and perspectives 20

References 20

Fixed points in ordered Banach spaces and applications to elliptic boundary–value problems 25

Gabriele Bonanno and Salvatore Marano

1. Introduction 25
2. Fixed points of increasing functions 26
3. Elliptic problems with discontinuous nonlinearities 28

References 31

A theorem of the alternative for linear control systems 33

Paolo Cubiotti

1. Introduction 33
2. The proof of theorem 1.4 37

References 41

Variational inequalities for static equilibrium market. Lagrangean function and duality 43

Patrizia Daniele

1. Introduction 43
2. Proof of theorem 1.2 48
3. Proof of theorem 1.3 49
4. Calculation of the equilibrium 53
5. Example 55

References 57

On dynamical equilibrium problems and variational inequalities 59

Patrizia Daniele and Antonino Maugeri

1. Introduction 60
2. A static market model 60
3. The time-dependent market model 64
4. Existence of equilibria 67

References 69

Nonlinear programming methods for solving optimal control problems 71

Carla Durazzi and Emanuele Galligani

1. Introduction 72
2. Framework of the method 74
3. Choice of the parameters 77
4. A global algorithm 82
5. Computational experience 84
   - 5.1. Optimal in-stream aeration 84
   - 5.2. Diffusion convection processes 91
   - 5.3. Numerical results 96

References 98

Optimal flow pattern in road networks 101

Paolo Ferrari

1. Introduction 101
2. The traditional theory of system optimization 103

3. A new theory of optimal flow pattern 107
4. Calculation of the optimal toll vector 111
5. An application to the real case 113
6. Conclusions 116
References 117

On the storng solvability of a unilateral boundary value problem for nolinear discontinuos operators in the plane 119

Sofia Giuffrè

1. Introduction 120
2. Basic assumptions and main results 121
3. Preliminary results 122
4. Proof of the theorems 123
5. References 127

Most likely traffic equilibrium route flows analysis and computation 129

T. Larsson, J.T. Lundgren, M. Patriksson and C. Rydergren

1. Introduction 130
2. Illustrative examples and applications 130
   2.1. Illustrative examples 130
   2.2. Applications 131
3. Most likely equilibrium flows 137
   3.1. Preliminaries 137
   3.2. An alternative derivation 139
4. Solution procedure for the entropy program 141
5. Experimental results 144
   5.1. The Sioux Falls network 146
   5.2. The Winnipeg network 147
   5.3. The Linköping network 149
6. An application: Exhaust fume emission analysis 151

Appendix A: Relation between the stochastic user equilibrium and the most likely route flows 152

Appendix B: Relation between the models for finding the most likely O–D link flows and the most likely route flows 153

References 157

Existence of solutions to bilevel variational problems in Banach spaces 161
Maria Beatrice Lignola and Jacqueline Morgan

1. Introduction 161
2. A general existence result 164
3. Monotone case 166
4. Pseudomonotone case 168
5. Open problems 171
References 172

On the existence of solutions to vector optimization problems 175
Giandomenico Mastroeni and Massimo Pappalardo

1. Introduction 175
2. Image space and separation 176
3. Existence of a vector minimum point 179
4. About the cone–compactness 181
References 184

Equilibrium problems and variational inequalities 187
Antonino Maugeri

1. Introduction 187
2. The Signorini problem 188
3. The obstacle problem 195
4. A continuous model of transportation 198
References 203

Axiomatization for approximate solutions in optimization 207
Henk Norde and Fioravante Patrone

1. Introduction 207
2. Optimization problems 210
3. Axioms 211
4. Characterizations of solutions 214
5. Vector optimization 217
6. Approximation with sequences 218
References 220

Necessary and sufficient conditions of Wardrop type for vectorial traffic equilibria 223

Werner Oettli

1. Introduction 223
2. The scalar case 224
3. The vectorial case 225
4. Results 226

References 228

Approximate solutions and Tikhonov well-posedness for Nash equilibria 231

L. Pusillo Chicco

1. Introduction 231
2. T–wp for Nash equilibria 233
3. A new approach to Tikhonov well-posedness for Nash equilibria 235
4. Ordinality of T^v–wp 237
5. Metric characterization of T^v–wp 239
6. An application: oligopoly models 241
7. Open problems 243

References 244

Equilibrium in time dependent traffic networks with delay 247

Fabio Raciti

1. Introduction 247
2. The model 249
3. Existence of Equilibria 251
4. An example 252

References 253

New results on local minima and their applications 255

Biagio Ricceri

References 267

An overview on projection-type methods for convex large-scale quadratic programs 269

Valeria Ruggiero and Luca Zanni

1. Introduction 270
2. The projection and splitting methods 272
3. The variable projection method 277
4. The adaptive variable projection method 284
5. Updating rules for the projection parameter 287
6. Solution of ineer QP subproblems 289
7. Computational experiments 291
