

## ERRATUM

### Emerging Neurosurgery in Africa – WFNS Rabat Reference Center (WFNS-RTC) for Training African Neurosurgeons

TO THE READERSHIP: Errors appeared in the book review by Lohkamp and Rutka (Lohkamp LN, Rutka JT. Emerging Neurosurgery in Africa – WFNS Rabat Reference Center (WFNS-RTC) for Training African Neurosurgeons. *J Neurosurg.* 2020;133[1]:257–258).

In the second paragraph, the number of inhabitants of the Democratic Republic of Congo is 60 million, not 6 million. The corrected sentence appears below.

Such was written about Dr. Didier Mudjir Balanda, the second neurosurgeon in a country of 60 million inhabitants, serving the Democratic Republic of Congo after having been trained at the WFNS-Rabat Reference Center for Training African Neurosurgeons.

In the third paragraph, the sentence about the neurosurgeons practicing in Africa was misleading. A more accurate statement appears below.

At the end of the last century (1998), there were only 79 neurosurgeons practicing within Sub-Saharan Africa with a population base of 615 million inhabitants.
