Key words: errata, addenda – galaxies: evolution – galaxies: formation – galaxies: interactions – galaxies: photometry – galaxies: structure.

This is an erratum to the paper entitled ‘Morphology and environment of galaxies with disc breaks in the S⁴G and NIRS0S’, published in MNRAS, 2014, 441.

We have noticed that in the equation 1 of the original paper an incorrect surface brightness zero-point was given. The correct value of the surface brightness zero-point is 20.472, and thus the correct equation is

$$\mu = -2.5 \log_{10} [I_v (\text{MJy str}^{-1})] + 20.472. \quad (1)$$

The error was purely clerical. The correct surface brightness zero-point value has been used in all the data analysis, and the error does not affect any of the results or numerical values presented in the paper.
