## Non-small-cell lung cancers: a heterogeneous set of diseases

Zhao Chen, Christine M. Fillmore, Peter S. Hammerman, Carla F. Kim and Kwok-Kin Wong

*Nature Reviews Cancer* **14**, 535–546 (2014)

In the original version of this article, the word 'proximal' was incorrectly used twice instead of 'distal' in two sentences in the legend for Figure 2. The sentences should have stated "ADCs can be modelled by  $Kras^{G12D}$  expression (long latency),  $Kras^{G12D}$  expression and  $Trp53$ -null, and epidermal growth factor receptor ( $EGFR^{T790M/L858R}$ ), among other genetic models, and they are thought to arise from more distal airway cells. These tumours often retain characteristics of distal airways, such as the expression of surfactant protein C (SPC), KRT7 and thyroid transcription factor 1 (TTF1)." These corrections have been made in the online version of the article.
