**Erratum to: J Knowl Econ**  
**DOI 10.1007/s13132-016-0430-4**

The original version of this article unfortunately contained mistake. In the explanation of equation 3,  $\lambda$  and  $\theta$  were in the wrong place. The correct presentation of explanation of equation 3 is given below.

$$\Delta \ln TFP_{it} = \Delta \ln GDP_{it} - [\alpha \cdot \Delta \ln K_{it} + \beta \cdot \Delta \ln L_{it} + \lambda \cdot \Delta \ln ICT_{it} + \theta \cdot \Delta \ln HC_{it}] \quad (3)$$

where the weights are given by the average value shares as follows:

$\Delta \ln GDP_{it}$	is the growth rate of output
$\alpha \cdot \Delta \ln K_{it}$	is the contribution of the aggregate physical capital
$\beta \cdot \Delta \ln L_{it}$	is the contribution of the aggregate labor
$\lambda \cdot \Delta \ln ICT_{it}$	is the contribution of the ICT
$\theta \cdot \Delta \ln HC_{it}$	is the contribution of the human capital
$\Delta \ln TFP_{it}$	is the total factor productivity growth

---
