Contents

<i>Preface</i>		xix
1	VECTOR ANALYSIS	1
1.1	Elementary Approach	1
	<i>Vectors and Vector Space Summary</i>	9
1.2	Scalar or Dot Product	12
	<i>Free Motion and Other Orbits</i>	14
1.3	Vector or Cross Product	20
1.4	Triple Scalar Product and Triple Vector Product	29
	<i>Triple Scalar Product</i>	29
	<i>Triple Vector Product</i>	31
1.5	Gradient, ∇	35
	<i>Partial Derivatives</i>	35
	<i>Gradient as a Vector Operator</i>	40
	<i>A Geometrical Interpretation</i>	42
1.6	Divergence, ∇	44
	<i>A Physical Interpretation</i>	45
1.7	Curl, $\nabla \times$	47
1.8	Successive Applications of ∇	53
1.9	Vector Integration	58
	<i>Line Integrals</i>	59

	<i>Surface Integrals</i>	62
	<i>Volume Integrals</i>	65
	<i>Integral Definitions of Gradient, Divergence, and Curl</i>	66
1.10	Gauss's Theorem	68
	<i>Green's Theorem</i>	70
1.11	Stokes's Theorem	72
1.12	Potential Theory	76
	<i>Scalar Potential</i>	76
1.13	Gauss's Law and Poisson's Equation	82
	<i>Gauss's Law</i>	82
	<i>Poisson's Equation</i>	84
1.14	Dirac Delta Function	86
	<i>Additional Reading</i>	95
2	VECTOR ANALYSIS IN CURVED COORDINATES AND TENSORS	96
<hr/>		
2.1	Special Coordinate Systems	97
	<i>Rectangular Cartesian Coordinates</i>	97
	<i>Integrals in Cartesian Coordinates</i>	98
2.2	Circular Cylinder Coordinates	98
	<i>Integrals in Cylindrical Coordinates</i>	101
	<i>Gradient</i>	107
	<i>Divergence</i>	108
	<i>Curl</i>	110
2.3	Orthogonal Coordinates	113
2.4	Differential Vector Operators	121
	<i>Gradient</i>	121
	<i>Divergence</i>	122
	<i>Curl</i>	124
2.5	Spherical Polar Coordinates	126
	<i>Integrals in Spherical Polar Coordinates</i>	130
2.6	Tensor Analysis	136
	<i>Rotation of Coordinate Axes</i>	137
	<i>Invariance of the Scalar Product under Rotations</i>	141
	<i>Covariance of Cross Product</i>	142
	<i>Covariance of Gradient</i>	143

	<i>Definition of Tensors of Rank Two</i>	144
	<i>Addition and Subtraction of Tensors</i>	145
	<i>Summation Convention</i>	145
	<i>Symmetry–Antisymmetry</i>	146
	<i>Spinors</i>	147
2.7	Contraction and Direct Product	149
	<i>Contraction</i>	149
	<i>Direct Product</i>	149
2.8	Quotient Rule	151
2.9	Dual Tensors	153
	<i>Levi–Civita Symbol</i>	153
	<i>Dual Tensors</i>	154
	<i>Additional Reading</i>	157
3	DETERMINANTS AND MATRICES	159
3.1	Determinants	159
	<i>Linear Equations: Examples</i>	159
	<i>Homogeneous Linear Equations</i>	160
	<i>Inhomogeneous Linear Equations</i>	161
	<i>Laplacian Development by Minors</i>	164
	<i>Antisymmetry</i>	166
3.2	Matrices	174
	<i>Basic Definitions, Equality, and Rank</i>	174
	<i>Matrix Multiplication, Inner Product</i>	175
	<i>Dirac Bra-ket, Transposition</i>	178
	<i>Multiplication (by a Scalar)</i>	178
	<i>Addition</i>	179
	<i>Product Theorem</i>	180
	<i>Direct Product</i>	182
	<i>Diagonal Matrices</i>	182
	<i>Trace</i>	184
	<i>Matrix Inversion</i>	184
3.3	Orthogonal Matrices	193
	<i>Direction Cosines</i>	194
	<i>Applications to Vectors</i>	195
	<i>Orthogonality Conditions: Two-Dimensional Case</i>	198

	<i>Euler Angles</i>	200
	<i>Symmetry Properties and Similarity Transformations</i>	202
	<i>Relation to Tensors</i>	204
3.4	Hermitian Matrices and Unitary Matrices	206
	<i>Definitions</i>	206
	<i>Pauli Matrices</i>	208
3.5	Diagonalization of Matrices	211
	<i>Moment of Inertia Matrix</i>	211
	<i>Eigenvectors and Eigenvalues</i>	212
	<i>Hermitian Matrices</i>	214
	<i>Anti-Hermitian Matrices</i>	216
	<i>Normal Modes of Vibration</i>	218
	<i>Ill-Conditioned Systems</i>	220
	<i>Functions of Matrices</i>	221
	<i>Additional Reading</i>	228
4	GROUP THEORY	229
4.1	Introduction to Group Theory	229
	<i>Definition of Group</i>	230
	<i>Homomorphism and Isomorphism</i>	234
	<i>Matrix Representations: Reducible and Irreducible</i>	234
4.2	Generators of Continuous Groups	237
	<i>Rotation Groups $SO(2)$ and $SO(3)$</i>	238
	<i>Rotation of Functions and Orbital Angular Momentum</i>	239
	<i>Special Unitary Group $SU(2)$</i>	240
4.3	Orbital Angular Momentum	243
	<i>Ladder Operator Approach</i>	244
4.4	Homogeneous Lorentz Group	248
	<i>Vector Analysis in Minkowski Space-Time</i>	251
	<i>Additional Reading</i>	255
5	INFINITE SERIES	257
5.1	Fundamental Concepts	257
	<i>Addition and Subtraction of Series</i>	260

5.2	Convergence Tests	262
	<i>Comparison Test</i>	262
	<i>Cauchy Root Test</i>	263
	<i>d'Alembert or Cauchy Ratio Test</i>	263
	<i>Cauchy or Maclaurin Integral Test</i>	264
5.3	Alternating Series	269
	<i>Leibniz Criterion</i>	270
	<i>Absolute and Conditional Convergence</i>	271
5.4	Algebra of Series	274
	<i>Multiplication of Series</i>	275
5.5	Series of Functions	276
	<i>Uniform Convergence</i>	276
	<i>Weierstrass M (Majorant) Test</i>	278
	<i>Abel's Test</i>	279
5.6	Taylor's Expansion	281
	<i>Maclaurin Theorem</i>	283
	<i>Binomial Theorem</i>	284
	<i>Taylor Expansion—More Than One Variable</i>	286
5.7	Power Series	291
	<i>Convergence</i>	291
	<i>Uniform and Absolute Convergence</i>	291
	<i>Continuity</i>	292
	<i>Differentiation and Integration</i>	292
	<i>Uniqueness Theorem</i>	292
	<i>Inversion of Power Series</i>	293
5.8	Elliptic Integrals	296
	<i>Definitions</i>	297
	<i>Series Expansion</i>	298
	<i>Limiting Values</i>	300
5.9	Bernoulli Numbers and the Euler–Maclaurin Formula	302
	<i>Bernoulli Functions</i>	305
	<i>Euler–Maclaurin Integration Formula</i>	306
	<i>Improvement of Convergence</i>	307
	<i>Improvement of Convergence by Rational Approximations</i>	309
5.10	Asymptotic Series	314
	<i>Error Function</i>	314
	<i>Additional Reading</i>	317

6	FUNCTIONS OF A COMPLEX VARIABLE I	318
6.1	Complex Algebra	319
	<i>Complex Conjugation</i>	321
	<i>Functions of a Complex Variable</i>	325
6.2	Cauchy–Riemann Conditions	331
	<i>Analytic Functions</i>	335
6.3	Cauchy’s Integral Theorem	337
	<i>Contour Integrals</i>	337
	<i>Stokes’s Theorem Proof of Cauchy’s Integral Theorem</i>	339
	<i>Multiply Connected Regions</i>	341
6.4	Cauchy’s Integral Formula	344
	<i>Derivatives</i>	346
	<i>Morera’s Theorem</i>	346
6.5	Laurent Expansion	350
	<i>Taylor Expansion</i>	350
	<i>Schwarz Reflection Principle</i>	351
	<i>Analytic Continuation</i>	352
	<i>Laurent Series</i>	354
6.6	Mapping	360
	<i>Translation</i>	360
	<i>Rotation</i>	361
	<i>Inversion</i>	361
	<i>Branch Points and Multivalent Functions</i>	363
6.7	Conformal Mapping	368
	<i>Additional Reading</i>	370
7	FUNCTIONS OF A COMPLEX VARIABLE II	372
7.1	Singularities	372
	<i>Poles</i>	373
	<i>Branch Points</i>	374
7.2	Calculus of Residues	378
	<i>Residue Theorem</i>	378
	<i>Evaluation of Definite Integrals</i>	379
	<i>Cauchy Principal Value</i>	384
	<i>Pole Expansion of Meromorphic Functions</i>	390
	<i>Product Expansion of Entire Functions</i>	392

7.3	Method of Steepest Descents	400
	<i>Analytic Landscape</i>	400
	<i>Saddle Point Method</i>	402
	<i>Additional Reading</i>	409
8	DIFFERENTIAL EQUATIONS	410
8.1	Introduction	410
8.2	First-Order ODEs	411
	<i>Separable Variables</i>	411
	<i>Exact Differential Equations</i>	413
	<i>Linear First-Order ODEs</i>	414
	<i>ODEs of Special Type</i>	418
8.3	Second-Order ODEs	424
	<i>Inhomogeneous Linear ODEs and Particular Solutions</i>	430
	<i>Inhomogeneous Euler ODE</i>	430
	<i>Inhomogeneous ODE with Constant Coefficients</i>	431
	<i>Linear Independence of Solutions</i>	434
8.4	Singular Points	439
8.5	Series Solutions—Frobenius’s Method	441
	<i>Expansion about x_0</i>	445
	<i>Symmetry of ODE and Solutions</i>	445
	<i>Limitations of Series Approach—Bessel’s Equation</i>	446
	<i>Regular and Irregular Singularities</i>	448
	<i>Fuchs’s Theorem</i>	450
	<i>Summary</i>	450
8.6	A Second Solution	454
	<i>Series Form of the Second Solution</i>	456
8.7	Numerical Solutions	464
	<i>First-Order Differential Equations</i>	464
	<i>Taylor Series Solution</i>	464
	<i>Runge–Kutta Method</i>	466
	<i>Predictor–Corrector Methods</i>	467
	<i>Second-Order ODEs</i>	468
8.8	Introduction to Partial Differential Equations	470
8.9	Separation of Variables	470
	<i>Cartesian Coordinates</i>	471

	<i>Circular Cylindrical Coordinates</i>	474
	<i>Spherical Polar Coordinates</i>	476
	<i>Additional Reading</i>	480
9	STURM-LIOUVILLE THEORY—ORTHOGONAL FUNCTIONS	482
9.1	Self-Adjoint ODEs	483
	<i>Eigenfunctions and Eigenvalues</i>	485
	<i>Boundary Conditions</i>	490
	<i>Hermitian Operators</i>	490
	<i>Hermitian Operators in Quantum Mechanics</i>	492
9.2	Hermitian Operators	496
	<i>Real Eigenvalues</i>	496
	<i>Orthogonal Eigenfunctions</i>	498
	<i>Expansion in Orthogonal Eigenfunctions</i>	499
	<i>Degeneracy</i>	501
9.3	Gram-Schmidt Orthogonalization	503
	<i>Orthogonal Polynomials</i>	507
9.4	Completeness of Eigenfunctions	510
	<i>Bessel's Inequality</i>	512
	<i>Schwarz Inequality</i>	513
	<i>Summary of Vector Spaces—Completeness</i>	515
	<i>Expansion (Fourier) Coefficients</i>	518
	<i>Additional Reading</i>	522
10	THE GAMMA FUNCTION (FACTORIAL FUNCTION)	523
10.1	Definitions and Simple Properties	523
	<i>Infinite Limit (Euler)</i>	523
	<i>Definite Integral (Euler)</i>	524
	<i>Infinite Product (Weierstrass)</i>	526
	<i>Factorial Notation</i>	528
	<i>Double Factorial Notation</i>	530
	<i>Integral Representation</i>	531
10.2	Digamma and Polygamma Functions	535
	<i>Digamma Function</i>	535
	<i>Polygamma Function</i>	536

	<i>Maclaurin Expansion, Computation</i>	537
	<i>Series Summation</i>	537
10.3	Stirling's Series	540
	<i>Derivation from Euler–Maclaurin Integration Formula</i>	540
	<i>Stirling's Series</i>	541
	<i>Numerical Computation</i>	542
10.4	The Incomplete Gamma Functions and Related Functions	545
	<i>Exponential Integral</i>	546
	<i>Error Integrals</i>	548
	<i>Additional Reading</i>	550
11	LEGENDRE POLYNOMIALS AND SPHERICAL HARMONICS	552
11.1	Introduction	552
	<i>Physical Basis: Electrostatics</i>	552
	<i>Generating Function</i>	553
	<i>Power Series</i>	556
	<i>Linear Electric Multipoles</i>	558
	<i>Vector Expansion</i>	559
11.2	Recurrence Relations and Special Properties	563
	<i>Recurrence Relations</i>	563
	<i>Differential Equations</i>	564
	<i>Upper and Lower Bounds for $P_n(\cos\theta)$</i>	566
11.3	Orthogonality	568
	<i>Expansion of Functions, Legendre Series</i>	569
11.4	Alternate Definitions of Legendre Polynomials	579
	<i>Rodrigues's Formula</i>	579
11.5	Associated Legendre Functions	581
	<i>Spherical Harmonics</i>	584
	<i>Additional Reading</i>	588
12	BESSEL FUNCTIONS	589
12.1	Bessel Functions of the First Kind, $J_\nu(x)$	589
	<i>Generating Function for Integral Order</i>	590
	<i>Applications of Recurrence Relations</i>	593
	<i>Bessel's Differential Equation</i>	594

	<i>Integral Representations</i>	595
	<i>Orthogonality</i>	599
	<i>Normalization</i>	600
	<i>Bessel Series</i>	600
	<i>Bessel Functions of Nonintegral Order</i>	608
12.2	Neumann Functions, Bessel Functions of the Second Kind	611
	<i>Definition and Series Form</i>	611
	<i>Other Forms</i>	613
	<i>Recurrence Relations</i>	613
	<i>Wronskian Formulas</i>	613
12.3	Asymptotic Expansions	617
	<i>Expansion of an Integral Representation</i>	618
	<i>Numerical Evaluation</i>	622
12.4	Spherical Bessel Functions	624
	<i>Definitions</i>	624
	<i>Limiting Values</i>	627
	<i>Recurrence Relations</i>	629
	<i>Numerical Computation</i>	630
	<i>Additional Reading</i>	637
13	HERMITE AND LAGUERRE POLYNOMIALS	638
13.1	Hermite Polynomials	638
	<i>Quantum Mechanical Simple Harmonic Oscillator</i>	638
	<i>Raising and Lowering Operators</i>	639
	<i>Recurrence Relations and Generating Function</i>	643
	<i>Alternate Representations</i>	645
	<i>Orthogonality</i>	646
13.2	Laguerre Functions	650
	<i>Differential Equation—Laguerre Polynomials</i>	650
	<i>Associated Laguerre Polynomials</i>	655
	<i>Additional Reading</i>	662
14	FOURIER SERIES	663
14.1	General Properties	663
	<i>Completeness</i>	664
	<i>Behavior of Discontinuities</i>	666

14.2	Advantages and Uses of Fourier Series	671
	<i>Periodic Functions</i>	671
	<i>Change of Interval</i>	674
14.3	Complex Fourier Series	677
	<i>Abel's Theorem</i>	678
14.4	Properties of Fourier Series	683
	<i>Convergence</i>	683
	<i>Integration</i>	684
	<i>Differentiation</i>	685
	<i>Additional Reading</i>	688
15	INTEGRAL TRANSFORMS	689
15.1	Introduction and Definitions	689
	<i>Linearity</i>	689
15.2	Fourier Transform	690
	<i>Laplace Transform</i>	693
15.3	Development of the Inverse Fourier Transform	694
	<i>Inverse Fourier Transform—Exponential Form</i>	695
	<i>Dirac Delta Function Derivation</i>	696
15.4	Fourier Transforms—Inversion Theorem	698
	<i>Exponential Transform</i>	698
	<i>Cosine Transform</i>	699
	<i>Sine Transform</i>	700
15.5	Fourier Transform of Derivatives	706
15.6	Convolution Theorem	712
	<i>Parseval's Relation</i>	715
15.7	Momentum Representation	718
15.8	Laplace Transforms	724
	<i>Definition</i>	724
	<i>Inverse Transform</i>	726
	<i>Partial Fraction Expansion</i>	726
	<i>Numerical Inversion</i>	729
15.9	Laplace Transform of Derivatives	730
	<i>Dirac Delta Function</i>	732
15.10	Other Properties	734
	<i>Substitution</i>	734
	<i>RLC Analog</i>	735

	<i>Translation</i>	736
	<i>Derivative of a Transform</i>	737
	<i>Integration of Transforms</i>	738
	<i>Limits of Integration—Unit Step Function</i>	738
15.11	Convolution or Faltung Theorem	742
15.12	Inverse Laplace Transform	746
	<i>Bromwich Integral</i>	746
	<i>Summary: Inversion of Laplace Transform</i>	752
	<i>Additional Reading</i>	754
16	PARTIAL DIFFERENTIAL EQUATIONS	756
16.1	Examples of Partial Differential Equations and Boundary Conditions	756
	<i>Boundary Conditions</i>	758
16.2	Heat Flow or Diffusion PDE	760
	<i>Alternate Solutions</i>	763
16.3	Inhomogeneous PDE—Green's Function	769
	<i>Additional Reading</i>	780
17	PROBABILITY	782
17.1	Definitions, Simple Properties	782
	<i>Counting of Permutations and Combinations</i>	787
17.2	Random Variables	789
17.3	Binomial Distribution	802
17.4	Poisson Distribution	804
17.5	Gauss's Normal Distribution	807
17.6	Statistics	812
	<i>Error Propagation</i>	812
	<i>Fitting Curves to Data</i>	815
	<i>The χ^2 Distribution</i>	817
	<i>The Student t Distribution</i>	821
	<i>Additional Reading</i>	825
18	CALCULUS OF VARIATIONS	826
	<i>Uses of the Calculus of Variations</i>	826
18.1	A Dependent and an Independent Variable	827
	<i>Concept of Variation</i>	827

18.2	Several Dependent Variables	837
	<i>Transversality Condition</i>	839
	<i>Hamilton's Principle</i>	841
18.3	Several Independent Variables	845
18.4	Several Dependent and Independent Variables	847
	<i>Relation to Physics</i>	848
18.5	Lagrangian Multipliers: Variation with Constraints	848
	<i>Variation with Constraints</i>	850
	<i>Lagrangian Equations</i>	853
18.6	Rayleigh–Ritz Variational Technique	861
	<i>Ground-State Eigenfunction</i>	862
	<i>Additional Reading</i>	866
19	NONLINEAR METHODS AND CHAOS	867
19.1	Introduction	867
19.2	The Logistic Map	869
19.3	Sensitivity to Initial Conditions and Parameters	874
	<i>Lyapunov Exponents</i>	874
	<i>Fractals</i>	875
19.4	Nonlinear Differential Equations	878
	<i>Bernoulli and Riccati Equations</i>	879
	<i>Fixed and Movable Singularities, Special Solutions</i>	881
	<i>Autonomous Differential Equations</i>	882
	<i>Local and Global Behavior in Higher Dimensions</i>	885
	<i>Dissipation in Dynamical Systems</i>	896
	<i>Bifurcations in Dynamical Systems</i>	898
	<i>Chaos in Dynamical Systems</i>	900
	<i>Routes to Chaos in Dynamical Systems</i>	901
	<i>Additional Reading</i>	903
APPENDIX 1	REAL ZEROS OF A FUNCTION	905
	<i>Bisection Method</i>	905
	<i>Three Warnings</i>	907
	<i>Additional Reading</i>	908
	<i>General References</i>	908
INDEX		911
