

ESSENTIALS OF PALEOMAGNETISM

LISA TAUXE

With Contributions from
Robert F. Butler, R. Van der Voo, and Subir K. Banerjee

CONTENTS

PREFACE	xiii
1 THE PHYSICS OF MAGNETISM	1
1.1 What is a magnetic field?	1
1.2 Magnetic moment	2
1.3 Magnetic flux	3
1.4 Magnetic energy	5
1.5 Magnetization and magnetic susceptibility	5
1.6 Relationship of B and H	6
1.7 A brief tour of magnetic units in the cgs system	6
1.8 The magnetic potential	8
1.9 Origin of the geomagnetic field	10
1.10 Problems	13
2 THE GEOMAGNETIC FIELD	17
2.1 Components of magnetic vectors	17
2.2 Reference magnetic field	19
2.3 Geocentric axial dipole (GAD) and other poles	23
2.4 Plotting magnetic directional data	26
2.4.1 <i>D</i> , <i>I</i> transformation	27
2.4.2 Virtual geomagnetic poles	28
2.4.3 Virtual dipole moment	30
2.5 Problems	31
3 INDUCED AND REMANENT MAGNETISM	33
3.1 Magnetism at the atomic level	33
3.2 Induced magnetization	37
3.2.1 Orbital contribution and diamagnetism	38
3.2.2 Role of electronic spins and paramagnetism	39
3.3 Ferromagnetism	41
3.4 Problems	45

4	MAGNETIC ANISOTROPY AND DOMAINS	47
4.1	The magnetic energy of particles	48
4.1.1	Exchange energy	48
4.1.2	Magnetic moments and external fields	49
4.1.3	Magnetocrystalline anisotropy energy	50
4.1.4	Magnetostriction: stress anisotropy	52
4.1.5	Magnetostatic (shape) anisotropy	53
4.1.6	Magnetic energy and magnetic stability	56
4.2	Magnetic domains	57
4.3	Thermal energy	60
4.4	Putting it all together	62
4.5	Problems	64
5	MAGNETIC HYSTERESIS	65
5.1	The “flipping” field	65
5.2	Hysteresis loops	69
5.2.1	Uniaxial anisotropy	69
5.2.2	Magnetic susceptibility	72
5.2.3	Cubic anisotropy	73
5.2.4	Superparamagnetic particles	73
5.2.5	Particles with domain walls	75
5.3	Hysteresis of mixtures of SP, SD, and MD grains	78
5.4	First-order reversal curves	80
5.5	Problems	83
6	MAGNETIC MINERALOGY	85
6.1	Iron-oxides	85
6.1.1	Titanomagnetites $\text{Fe}_{3-x}\text{Ti}_x\text{O}_4$	87
6.1.2	Hematite-ilmenite $\text{Fe}_{2-y}\text{Ti}_y\text{O}_3$	89
6.1.3	Oxidation of (titano)magnetites to (titano)maghemites	92
6.2	Iron-oxyhydroxides and iron-sulfides	93
6.3	FeTi oxides in igneous rocks	94
6.4	Magnetic mineralogy of soils and sediments	95
6.5	Problems	98
7	HOW ROCKS GET AND STAY MAGNETIZED	101
7.1	The concept of dynamic equilibrium	101
7.2	Essential Néel theory	103
7.3	Viscous remanent magnetization	105
7.4	Thermal remanent magnetization	107
7.5	Chemical remanent magnetization	114
7.6	Detrital remanent magnetization	116
7.6.1	Physical alignment of magnetic moments in viscous fluids	116

7.6.2	Post-depositional processes	121
7.6.3	Inclination error	122
7.7	Isothermal remanent magnetization	124
7.8	Thermo-viscous remanent magnetization	125
7.9	Natural remanent magnetization	126
7.10	Artificial remanences	127
7.11	Problems	128
8	APPLIED ROCK (ENVIRONMENTAL) MAGNETISM	131
8.1	Images	131
8.2	Critical temperatures	131
8.3	Magnetic susceptibility	134
8.3.1	Measurement of magnetic susceptibility	136
8.3.2	Temperature dependence	136
8.3.3	Frequency dependence	137
8.3.4	Outcrop measurements	138
8.4	Magnetization	138
8.4.1	Magnetic interactions: IRM and ARM techniques	139
8.4.2	IRM “unmixing”	140
8.4.3	Combining thermal and isothermal information for rock magnetic characterization	141
8.5	Hysteresis parameters	143
8.5.1	The building blocks of hysteresis loops	143
8.5.2	Hysteresis behavior of mixtures	144
8.6	Trends in parameters with grain size	146
8.7	Ratios	146
8.8	Applications of rock magnetism	149
8.8.1	Paleoclimatic information from lake sediments	149
8.8.2	Paramagnetic contributions to magnetic susceptibility	152
8.8.3	Separation of two superparamagnetic particle size distributions	152
8.8.4	Identification of biogenic magnetite in natural samples	155
8.9	Concluding remarks	158
8.10	Problems	158
9	GETTING A PALEOMAGNETIC DIRECTION	161
9.1	Paleomagnetic sampling	161
9.1.1	Types of samples	162
9.1.2	Orientation in the field	165
9.1.3	A note on terminology	167
9.2	Measurement of magnetic remanence	169
9.3	Changing coordinate systems	169
9.4	Demagnetization techniques	170
9.5	Estimating directions from demagnetization data	172
9.6	Vector difference sum	176
9.7	Best-fit lines and planes	176

9.8	Field strategies	177
9.9	Problems	179
10	PALEOINTENSITY	187
10.1	Paleointensity with TRMs	189
10.1.1	Step-wise heating family of experiments	190
10.1.2	Reducing the effect of heating	195
10.1.3	Quality assurance and data selection	201
10.2	Paleointensity with DRMs	201
10.3	Problems	204
11	FISHER STATISTICS	207
11.1	The normal distribution	207
11.2	Statistics of vectors	211
11.2.1	Estimation of Fisher statistics	213
11.2.2	Some illustrations	216
11.3	Significance tests	217
11.3.1	Watson's test for randomness	219
11.3.2	Comparison of precision	220
11.3.3	Comparing known and estimated directions	221
11.3.4	Comparing two estimated directions	221
11.3.5	Combining directions and great circles	224
11.4	Inclination-only data	225
11.5	Is a given data set Fisher distributed?	225
11.6	Problems	227
12	BEYOND FISHER STATISTICS	231
12.1	Non-Fisherian parametric approaches	232
12.1.1	The Kent distribution	232
12.1.2	The Bingham distribution	233
12.1.3	The Bingham-LeGoff approximation	234
12.1.4	The bi-Gaussian distribution	234
12.2	The simple (naïve) bootstrap	235
12.3	The parametric bootstrap	237
12.4	When are two data sets distinct?	238
12.5	Application to the "reversals test"	238
12.6	Application to the "fold test"	239
12.7	Problems	242
13	PALEOMAGNETIC TENSORS	245
13.1	Anisotropy of magnetic susceptibility	245
13.2	Hext statistics	250
13.2.1	Hext confidence ellipses	251
13.2.2	Hext F statistics for significance of eigenvalue ratios	252

13.3	Limitations of Hext statistics	252
13.4	Bootstrap confidence ellipses	253
13.5	Comparing mean eigenvectors with other axes	254
13.6	Shape	258
13.7	Anisotropy of magnetic remanence	261
13.7.1	Anisotropy of ARM and TRM	262
13.7.2	Anisotropy of DRM	263
13.8	Problems	264
14	THE ANCIENT GEOMAGNETIC FIELD	267
14.1	Historical measurements	269
14.2	Archaeo- and paleomagnetic records	272
14.2.1	Pioneers in paleomagnetism	272
14.2.2	The last seven millenia	274
14.2.3	Westward drift	275
14.2.4	The more distant past	275
14.3	Time series of paleomagnetic data	276
14.3.1	Excursions	276
14.3.2	Reversals	280
14.4	Geomagnetic polarity time scale—a first look	282
14.5	The time-averaged field	282
14.6	Long-term changes in paleointensity	285
14.7	Statistical models of paleosecular variation	286
14.8	Problems	291
15	THE GPTS AND MAGNETOSTRATIGRAPHY	295
15.1	Early efforts in defining the GPTS	296
15.1.1	The addition of biostratigraphy	300
15.1.2	Astrochronology	301
15.1.3	A note on terminology	304
15.2	Current status of the geological time scale	305
15.3	Applications	305
15.3.1	Dating geological sequences	305
15.3.2	Measuring rates	307
15.3.3	Tracing of magnetic isochrons	308
15.4	Problems	313
16	TECTONIC APPLICATIONS OF PALEOMAGNETISM	315
16.1	Essentials of plate tectonic theory	315
16.2	Poles and apparent polar wander	319
16.3	The Gondwana APWP	322
16.4	Inclination shallowing and GAD	325
16.5	Paleomagnetism and plate reconstructions	330
16.6	Discordant poles and displaced terranes	331

16.7	Inclination-only data and APWPs	332
16.8	Concluding remarks	335
16.9	Problems	335
APPENDIX A: DEFINITIONS, DERIVATIONS, AND TRICKS		339
A.1	Definitions	339
A.2	Derivations	343
A.2.1	Langevin function for a paramagnetic substance	343
A.2.2	Superparamagnetism	344
A.3	Useful tricks	345
A.3.1	Spherical trigonometry	345
A.3.2	Vector addition	346
A.3.3	Vector subtraction	346
A.3.4	Vector multiplication	347
A.3.5	Tricks with tensors	347
A.3.6	Upside down triangles, ∇	357
A.3.7	The statistical bootstrap	361
A.3.8	Directions using a sun compass	362
APPENDIX B: PLOTS USEFUL IN PALEOMAGNETISM		365
B.1	Equal-area projections	365
B.1.1	Calculation of an equal-area projection	365
B.1.2	Plotting directions	365
B.1.3	Bedding tilt corrections	367
B.1.4	Reading ternary diagrams	368
B.1.5	Quantile-Quantile plots	369
APPENDIX C: PALEOMAGNETIC STATISTICS AND PARAMETER ESTIMATION		373
C.1	Hysteresis parameters	373
C.2	Directional statistics	375
C.2.1	Calculation of Watson's V_w	375
C.2.2	Combining lines and planes	375
C.2.3	Inclination-only calculation	376
C.2.4	Kent 95% confidence ellipse	378
C.2.5	Bingham 95% confidence parameters	379
C.3	Paleointensity statistics	380
APPENDIX D: ANISOTROPY IN PALEOMAGNETISM		385
D.1	The 15-measurement protocol	385

D.2	The spinning protocol	386
D.3	Correction of inclination error with AARM	387
APPENDIX E: THE MagIC DATABASE		391
E.1	Introduction	391
E.2	Getting started	392
E.3	Perusing the existing data	392
E.4	Uploading data to the database	392
E.5	Structure of the database tables	393
E.6	A word about method codes	393
APPENDIX F: COMPUTER SKILLS		397
F.1	Programming Python for paleomagnetism	397
F.1.1	Why Python?	397
F.1.2	Installing and starting Python	398
F.1.3	Finding the command line window	398
F.1.4	Programming essentials	398
F.1.5	A first program	400
F.1.6	Variables	400
F.1.7	Data structures	400
F.1.8	Operations and comparisons	402
F.1.9	Conditionals and flow control	402
F.1.10	Input/output	403
F.1.11	Functions and modules	405
F.1.12	Plotting	405
F.2	Survival *NIX	407
F.2.1	Redirecting input and output	408
F.2.2	Wildcards	408
F.2.3	*NIX commands	409
F.2.4	Text editors	411
F.3	The PmagPy software package	411
F.3.1	Downloading and installing PmagPy	411
F.3.2	General characteristics of PmagPy programs	411
F.3.3	Examples of how to use PmagPy programs	412
F.4	Complaints department	461
