OVERVIEW

- Background: Trading Consequences
- OCR accuracy estimation
 - Motivation
 - Related work
 - OCR errors in text mining (eye-balling data versus quantitative evaluation)
 - Computing text quality
 - Manual vs. automatic rating
- Summary and conclusion

TRADING CONSEQUENCES

- JISC/SSHRC Digging into Data Challenge II (2 year project, 2012-2013)
- Text mining, data extraction and information visualisation to explore big historical datasets.
- Focus on how commodities were traded across the globe in the 19th century.
- Help historians to discover novel patterns and explore new research questions.

PROJECT TEAM

Colin Coates, Andrew Watson: historical analysis

Jim Clifford: historical analysis

James Reid, Nicola Osborne: data management, social media

Aaron Quigley, Uta Hinrichs: information visualisation

(CDATA[' INTRODUCTION, AS the following Vindication may fall into the hands of perfons who have
never read the Hiftory of the Politicks of Great Britain and France, it will not be improper, before I enter
on my Defence, to ftate the principal facts, which were fuccef- fively proved by authentic documents, in the
fixteen chapters, of which that wrork is compofed. - r 1. In the celebrated conference at PiUnitz; in Auguft,
i;gi, the Britifh Government took not the rnoft diftant part: and if.-any treaty was concluded there, which
is itfelf a matter of great doubt, the British Go- vernment not only never acceded to it, but was, never
apprifed even of its contents.- Further, when the Britiih Government was requefted in 1701 to join a
coalition againft France, it gave a pofitive and unequivocal refufal. B 2 2. Toward]]> </page>
<![CDATA[4 2. Toward the clofe of the fame year the valuable colony of St. Domingo was pre¬ served to</pre>
France by the timely affiftance fent by Lord Effingham, then Governor of Jamaica : and the British. Cabinet
fignified through its AmbafTador at Paris to the French Government, that it fully approved of Lord
Effingham's conduct.. At the fame time, true to the ftri&eir. principles of ho- nour and neutrality, it
refufed the advan- tageous offer made by the French colonifts, who were highly diflatisfied with the Na-
tional AfTembly, to furrender the French part of St. Domingo to the Crown of Bri- tain. And thefe a6ls of
generofity were re* paid by France with the utmoft ingrati- tude. 3. When Louis XVI. formally accepted the
new conflitution, in September, 17Q1, and fent circular letters to the different Courts of Europe fignifying
his affent, the Court of Great Britain was one of the firft which returned an anfwer; and the anfwer was
couched in very refpectful terms, where- as fome other courts either did not answer at HfWta]]> </page>

The fishermen's mass to High Heaven bath ascended, The first star is looking with smiles from the sky, The sea gulls in air with their bright wings extended, Proclaim that the fishermen's harvest is nigh.

Oh 1 I have been theve, and seen them all kneeling,
There takes turned appared beneath the bright sky,
And heard their low throbe of worshipping feeling,
And seen pure develton gush out from each eye;
And off, 'mid the words rough buttles and server,
And pray'd for such faith in brighter to-morrow
And pray'd for such faith in brighter to-morrow
As shone from each faith in brighter to-morrow

By falt Trales bay, ob! did you e'er wander,
Where quiet and beauty are blanded in one,
Watching the brooklets their pearly drops squander,
Bright gens soon to torm for the brow of the san?
And have you e'er heard the swell of devotion,
Like chorus of angels from depites of the sea,
As mass bath been said by those sons of the ocean,
The fishermen humble of quiet Trales?

The Fishermen's Mass.

Stronger than the tempest's rage Is Thy power from age to age; Then dielst once its wrath assuage, We will own Thy mighty power, Even in the darkest hour, And receive as blessed dower All Thy will.

When upon the stormy deep,
Pishermen their vigils keep,
Wherefore should their lovers weep?
When the storm is raging high,
And the waves leep to the sky,
Wherefore should we first and sigh?
Thou dost ease.

Again and again with fond kisses bedewing

Her haby's soft cheek, as the resebod as fair;
Again and again her look upward renewing,
This song, sweet and solemn, she breather on the air;

She looks through her tears to her Father in heaven, Them, bisesing her child, cries, "Ah, blees'd be that smile! And blees'd be the saints! now the promise is given! Sure, mass it was said—he'll be bere in a while."

Upon the dark storm, from the fisherman s dwelling.
There shines a faint light like a stor through a cloud;
Fast bugging her base to her basem high swelling,
Tight clasping her resary, Mary's low bowed.

Brave Dermot looks up with a spirit all lowly, And, wiping the brine from his storm-beaten head, Crins " Mother of Jusus, and saints the most holy, Befriend !—Surs, the fishermen's mass it was said,")F

WHY OCR ACCURACY ESTIMATION?

- A reasonable amount of already digitised books (some with very bad text quality). Can we mine some of them now.
- To what extent do OCR errors affect text mining? What is their effect when dealing with big data?
- What text is of sufficient high quality to be understood? How bad is too bad? What happens to the rest?
- Can we measure text quality? How does it compare to human quality ranking of text?

RELATED WORK

- Some OCR output contains character-based accuracy rates which can be very deceptive.
- Popat, 2009:
 - Extensive study on quality ranking of short OCRed text snippets in different languages. Examined rank order of text snippets of inter-, intra- and machine ratings.
 - Compared spatial and sequential character n-gram-based approaches to a dictionary-based approach (web corpus, capped at 50K most frequent words per language).
 - Compared random to balanced (stratified) sampling.
 - Metric: average rank correlation.

OCR ERRORS AND BIG DATA

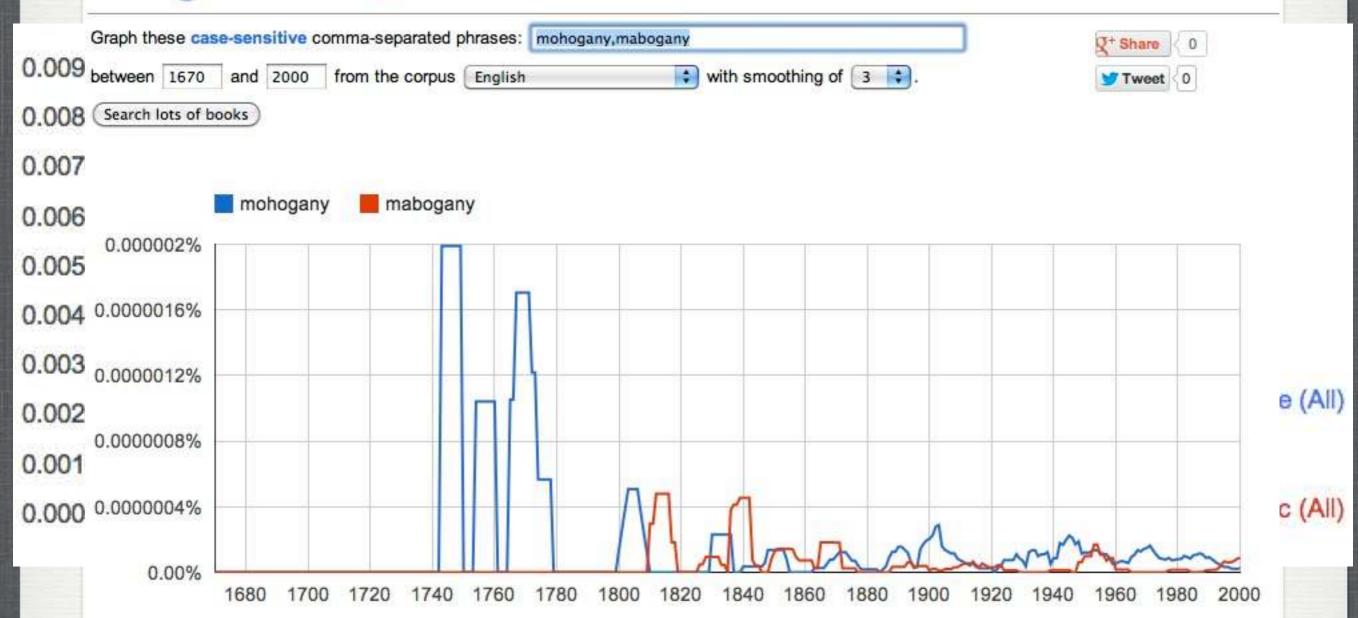

- Are OCR errors negligible when mining big data to detect trends?
- Our data suffers from all the common OCR error types (at best just a few character insertions, substitutions and deletions), at worst much worse (page upside down).
- Character confusion examples:
 - e -> c, a -> o, h -> b, l -> t, m -> n, f -> s

OCR ERRORS AND TEXT MINING

- Need a more quantitative analysis.
- Built a commodity and location recognition tool.
- Evaluated it against manually annotated gold standard.

| | TP | FP | $\mathbf{F}\mathbf{N}$ | P | \mathbf{R} | F |
|----------|-------|-----|------------------------|------|--------------|------|
| TM: com | 797 | 342 | 310 | 0.70 | 0.72 | 0.71 |
| TM: loc | 1,599 | 489 | 1,549 | 0.77 | 0.51 | 0.61 |
| IAA: com | 283 | 112 | 109 | 0.72 | 0.72 | 0.72 |
| IAA: loc | 582 | 65 | 189 | 0.90 | 0.76 | 0.82 |

OCR ERRORS AND TEXT MINING

- 32.6% of false negative commodity mentions (101 of 310) contain OCR errors (= 9.1% of all commodity mentions in the gold standard)
 - sainon, rubher, tmber
- 30.2% of false negative location mentions (467 of 1,549) contain OCR errors (= 14.8% of all location mentions in the gold standard)
 - Montreai, Montroal, Mont- treal and 10NTREAL.

PREDICTING TEXT QUALITY

- Can we compute a simple quality score for a large data collection (i.e. over 7 billion words)?
- How easily can humans perform document-level quality rating?

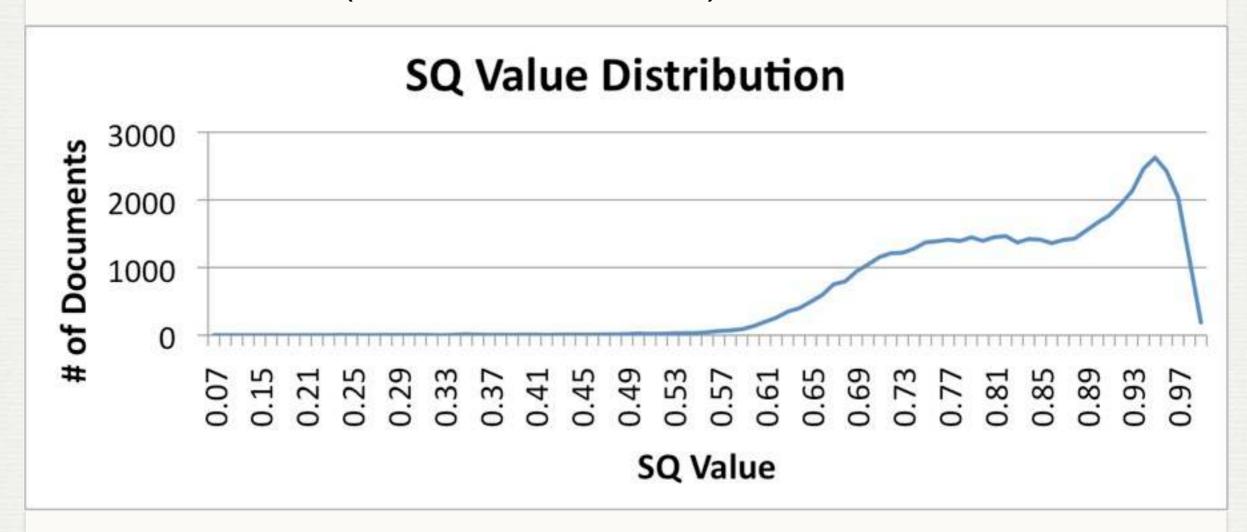

COMPUTING TEXT QUALITY

- Simple document-level quality score to get a rough estimate of how good a document is.
- Word tokens found in an English dictionary (aspell "en") and Roman/Arabic numbers over all word tokens in the text.
- Scores range between 0 and 1.
- Caveat: it does not consider historic variants.

$$SQ = \frac{W_{good}}{W_{all} + 1}$$

COMPUTING TEXT QUALITY

 Score distribution over the English Early Canadiana Online data (55,313 documents).

DATA PREPARATION

- Early Canadiana Online (books, magazines and government publications relevant to Canadian history ranging from 1600 to the 1940s)
- 83,016 documents (almost 4 million images containing text mostly in English and French but also in 10 First Nation languages, European languages and Latin).
- Language identification (or meta data information) to retain only English content (55,313 documents).

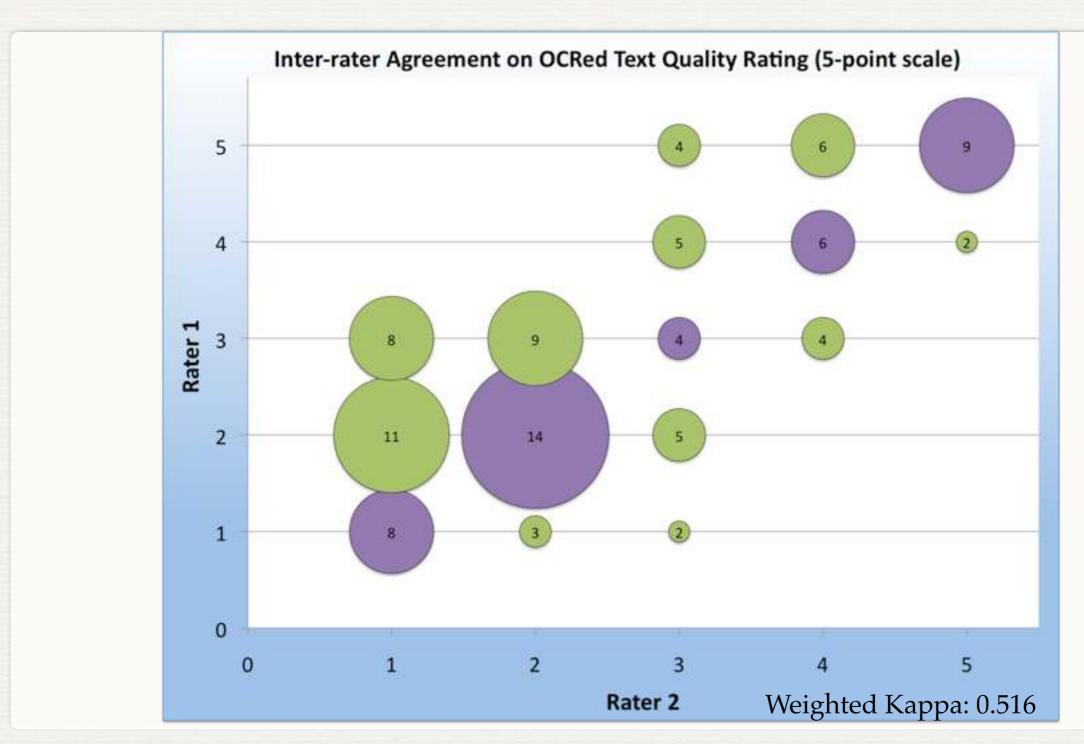

DATA PREPARATION

- Ran the automatic scoring over all English ECO documents.
- Applied stratified sampling to collect 100 documents by randomly selecting:
 - \blacksquare 20 documents where 0 >= SQ < 0:2,
 - \blacksquare 20 documents where 0.2 >= SQ < 0.4,
 - \blacksquare 20 documents where 0.4 >= SQ < 0.6,
 - 20 documents where 0.6 >= SQ < 0.8,</p>
 - \blacksquare 20 documents where 0.8 >= SQ < 1.
- Shuffled documents and removed the quality score.

MANUAL RATING

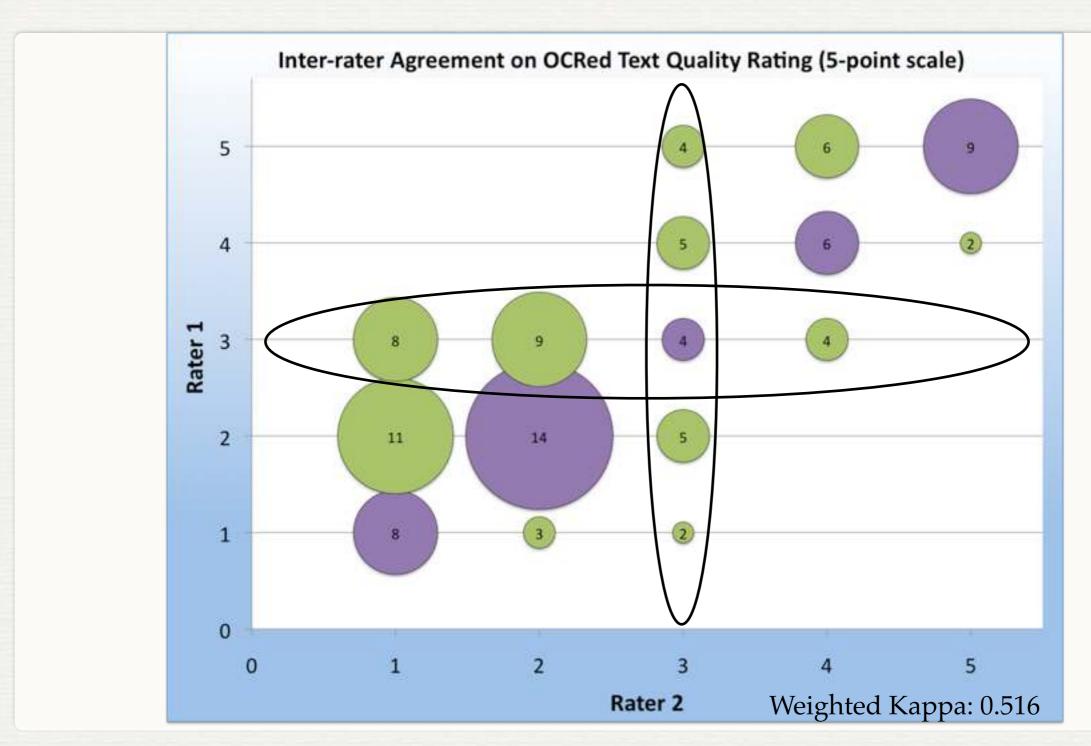

- Two raters looked at each document and rated it on a 5-point scale.
 - 5 ... OCR quality is high. There are few errors. The text is easily readable and understandable.
 - 4 ... OCR quality is good. There are some errors but they are limited in number and the text is still mostly readable and understandable.
 - 3 ... OCR quality is mediocre. There are numerous OCR errors and only part of the text is readable and understandable.
 - 2 ... OCR quality is low. There is a large number of OCR errors which seriously affect the readability and understandability of the majority of the text.
 - 1 ... OCR quality is extremely low. The text is so full of errors that it is not readable and understandable.

AUTOMATIC VS HUMAN

AUTOMATIC VS HUMAN

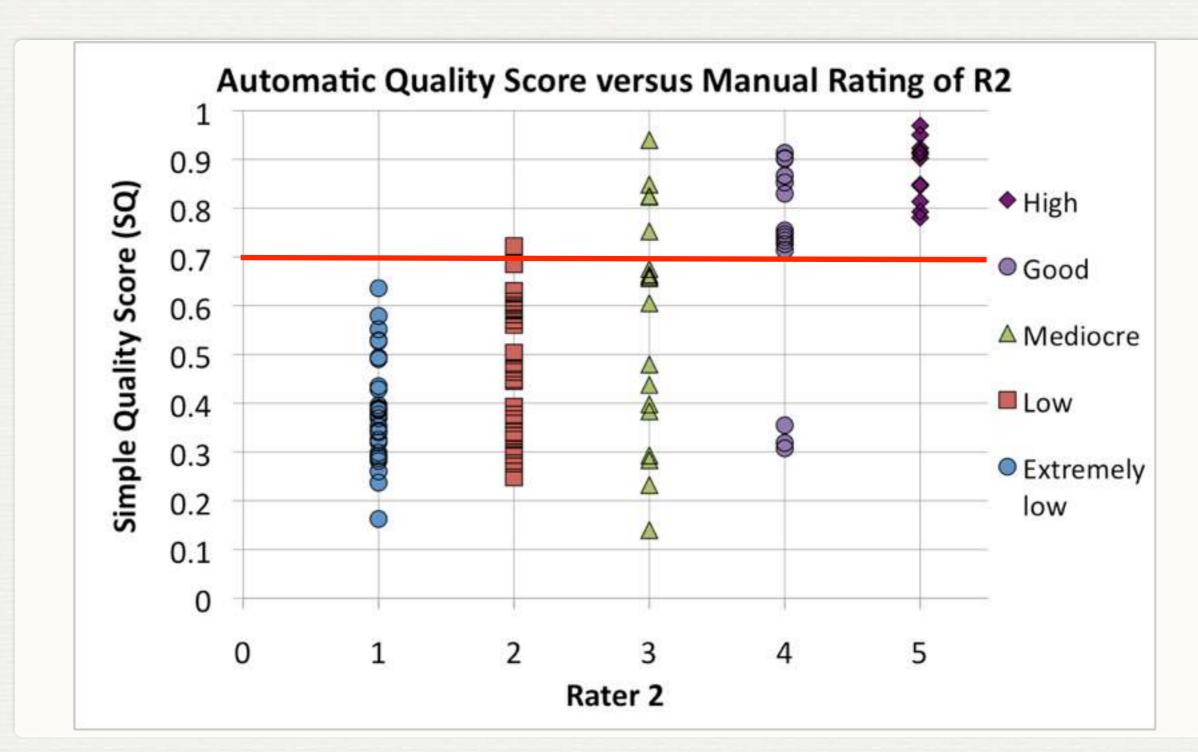

AUTOMATIC VS HUMAN

AUTOMATIC VS HUMAN

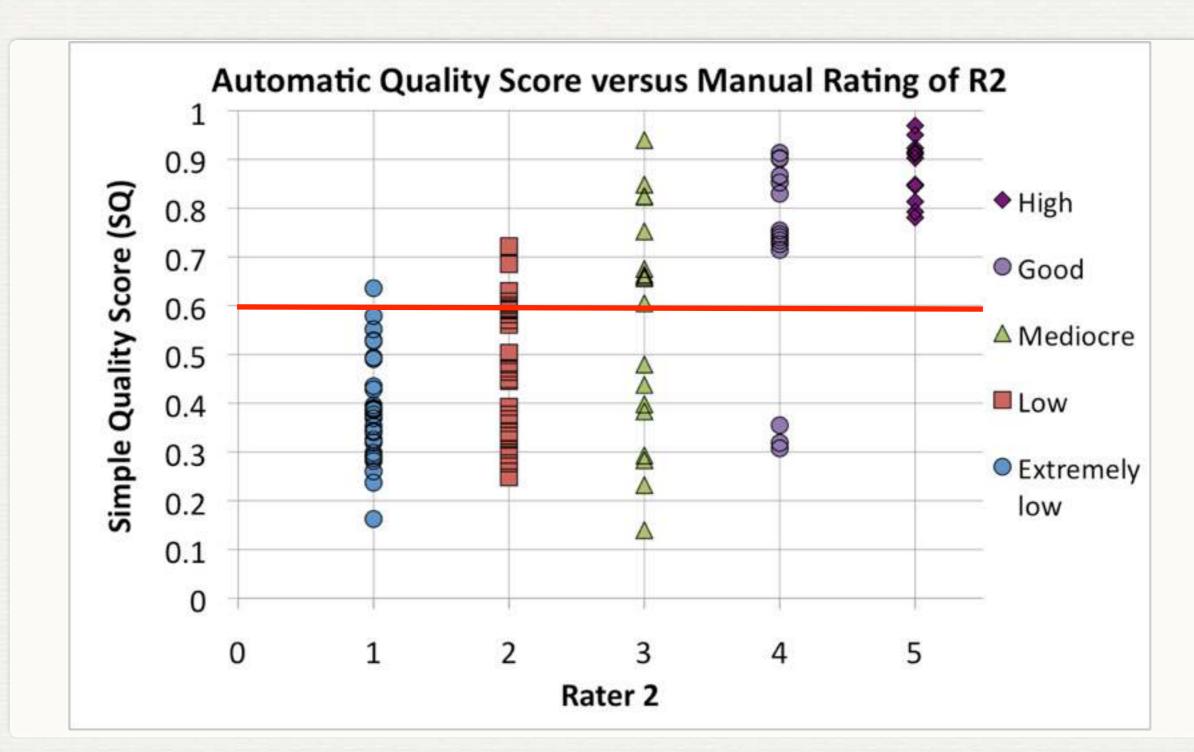

AUTOMATIC VS HUMAN

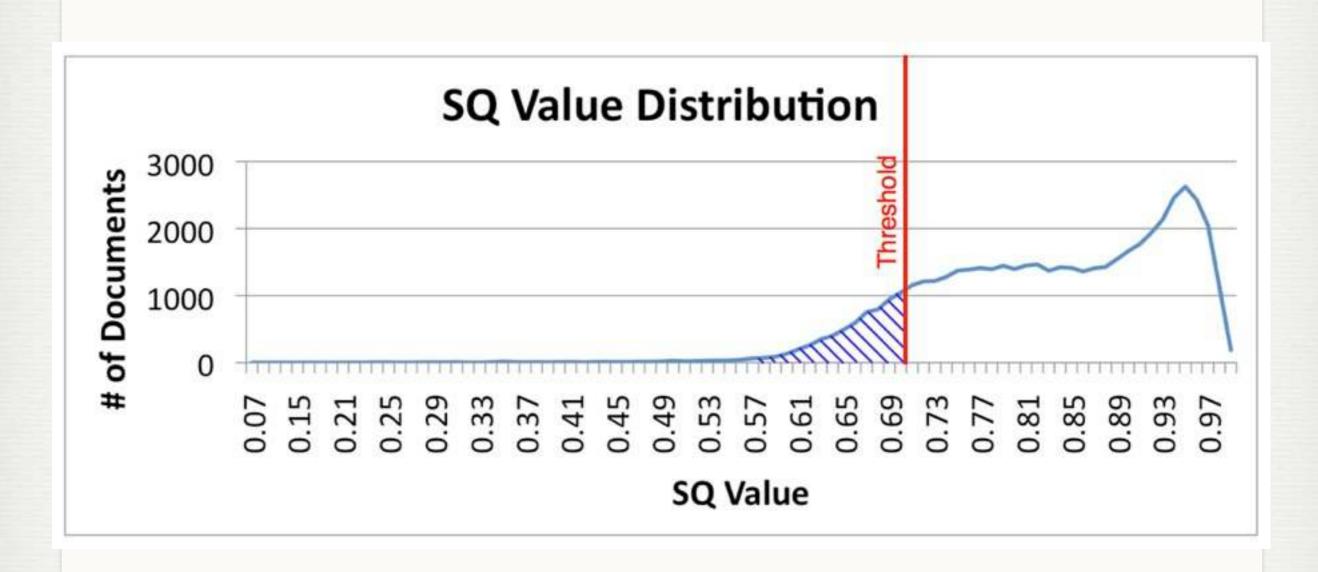

DATeCH 2014, May 20th 2014

AUTOMATIC VS HUMAN

THRESHOLD?

CONCLUSION

- We applied a simple quality scoring method to a large document collection and showed that automatic rating correlates with human rating.
- Document-level rating is not easy to do manually.
- Automatic document-level rating is not ideal but it give us a first "taste" of how good the quality of a document is. It is much more consistent than a person doing the same task.
- Many OCR errors are noise in big data but when added up they affect a significant amount of text.
- We found that named entities are effected worse than common words.
- HSS scholars need to be made much more aware of OCR errors affecting their search results for historical collections.

FUTURE WORK

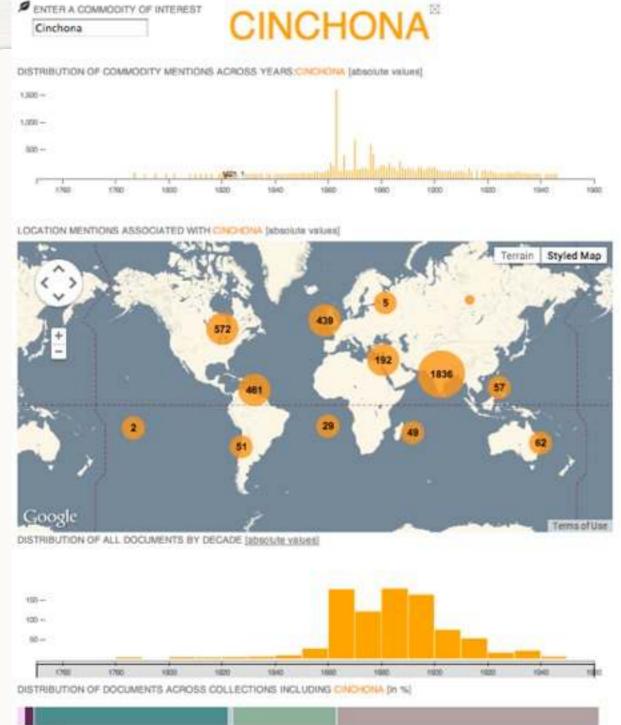

- Consider publication date and digitisation date when doing OCR quality estimation.
- Examine the bad documents identify those worth post-correcting.
- AHRC big data project (Palimpsest) on mining and geo-referencing literature set in Edinburgh.
 Collaboration with literary scholars interested in locospecificity and its context in literature.

MINED INFORMATION

Example sentence:

From Padang was exported, in 1871, 6,127 piculs of cassia bark, of which a large portion was shipped to America (Fliickiger and Hanbury). ...

- Normalised and grounded entities:
 - commodity: cassia bark [concept: Cinnamomum cassia]
 - date: 1871 (year=1871)
 - location: Padang (lat=-0.94924;long=100.35427;country=ID)
 - location: America (lat=39.76;long=-98.50;country=n/a)
 - quantity + unit: 6,127 piculs

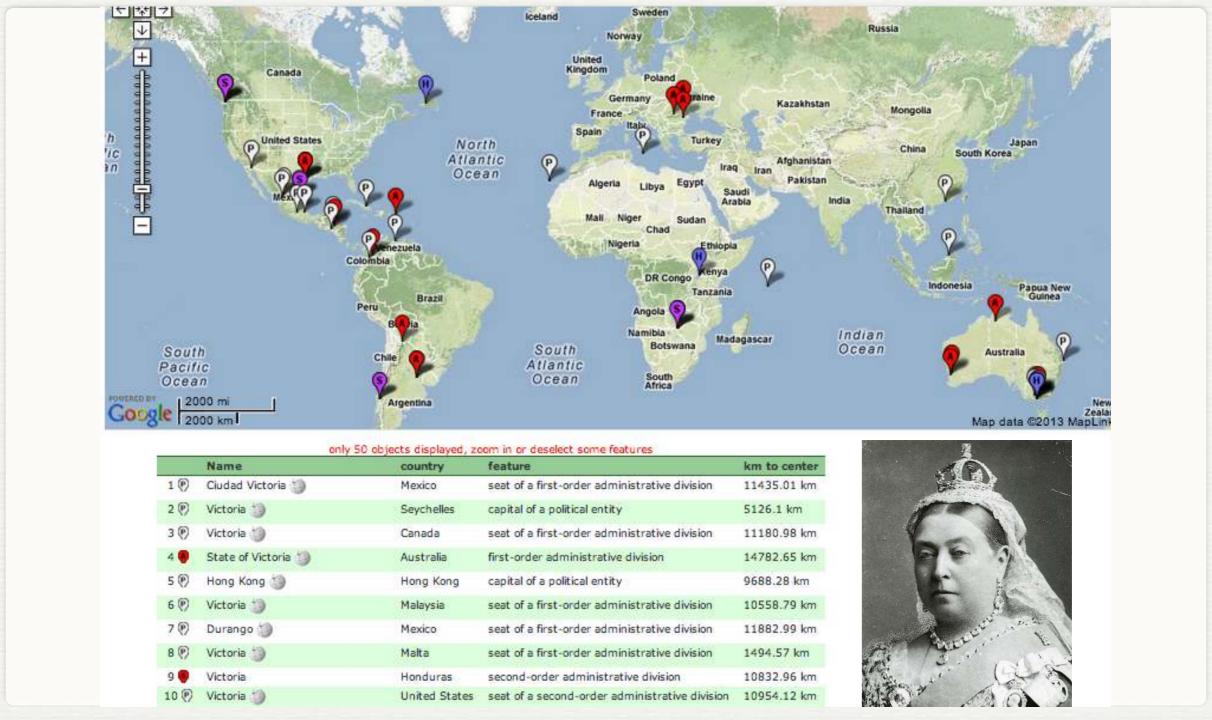

MINED INFORMATION

Example sentence:

From Padang was exported, in 1871, 6,127 piculs of cassia bark, of which a large portion was shipped to America (Fliickiger and Hanbury). ...

- Extracted entity attributes and relations:
 - origin location: Padang
 - destination location: America
 - commodity–date relation: cassia bark 1871
 - commodity-location relation: cassia bark Padang
 - commodity-location relation: cassia bark America

EDINBURGH GEOPARSER

Scotland's National Collections and the Digital Humanities, Edinburgh, 14/02/2014

CONCLUSION

- Importance of two-way collaboration between technology and humanities expert in digital HSS projects.
- Value of iterative development and rapid prototyping.
- Geo-referencing text is very important for historical analysis.
- Most OCR errors are noise in big data but HSS scholars need to be made more aware of OCR errors affecting their search results for historical collections.
