Evolution Semigroups in Dynamical Systems and Differential Equations

**Carmen Chicone
Yuri Latushkin**

American Mathematical Society

Contents

Chapter 1. Introduction	1
1.1. Motivations and main results	2
1.2. Historical comments	6
1.3. Organization and content	8
Chapter 2. Semigroups on Banach Spaces and Evolution Semigroups	21
2.1. Introduction to semigroups	21
2.2. Evolution semigroups and hyperbolicity	37
2.3. Bibliography and remarks	53
Chapter 3. Evolution Families and Howland Semigroups	57
3.1. Evolution families and dichotomy	57
3.2. Howland semigroups on the line	62
3.3. Howland semigroups on the half line	73
3.4. Bibliography and remarks	78
Chapter 4. Characterizations of Dichotomy for Evolution Families	87
4.1. Discrete dichotomies: an algebraic approach	87
4.2. Green's function and evolution semigroups	103
4.3. Dichotomy and solutions of nonhomogeneous equations	107
4.4. Hyperbolicity and dissipativity	118
4.5. Bibliography and remarks	126
Chapter 5. Two Applications of Evolution Semigroups	131
5.1. Control theory	131
5.2. Persistence of dichotomy	155
5.3. Bibliography and remarks	158
Chapter 6. Linear Skew-Product Flows and Mather Evolution Semigroups	163
6.1. Linear skew-product flows and dichotomy	163
6.2. The Mather semigroup	173
6.3. Sacker-Sell spectral theory	191
6.4. Bibliography and remarks	200
Chapter 7. Characterizations of Dichotomy for Linear Skew-Product Flows	205
7.1. Pointwise dichotomies	205
7.2. The Annular Hull Theorem	222
7.3. Dichotomy, mild solutions, and Green's function	230
7.4. Isomorphism Theorems	240
7.5. Dichotomy and quadratic Lyapunov function	246
7.6. Bibliography and remarks	256

Chapter 8. Evolution Operators and Exact Lyapunov Exponents	261
8.1. Oseledets' Theorem and linear skew-product flows	261
8.2. The kinematic dynamo operator	274
8.3. The Ruelle transfer operator	304
8.4. Bibliography and remarks	332
Bibliography	341
List of Notations	357
Index	359
