Throughout the article, the fungus which was mentioned *Stilbella fimetaria* SES201 was re-identified as *Acremonium* sp. SES201.

Although the molecular analysis based on BLAST of the internal transcript spacer region (ITS) and of 5.8, 18 and

28S rDNA gave 99% match with *Stilbella fimetaria*, the morphological analysis showed conidiophores that belong to *Acremonium* genus but not synnematos structures typical of *Stilbella*. The genera *Acremonium* and morphologically similar *Stilbella* have not yet been fully studied on a molecular basis. Under the morphological basis, the fungus was reidentified as *Acremonium* sp. SES201 = DSM 24697.
