<b>SYMBOLS</b>	<b>xvi</b>
<b>PREFACE</b>	<b>xviii</b>
<b>1 DISPLACEMENT STRUCTURE AND ARRAY ALGORITHMS</b>	<b>1</b>
1.1 Introduction	2
1.2 Toeplitz Matrices	3
1.3 Versions of Displacement Structure	7
1.4 Application to the Fast Evaluation of Matrix-Vector Products	15
1.5 Two Fundamental Properties	16
1.6 Fast Factorization of Structured Matrices	18
1.6.1 Schur Reduction (Deflation)	18
1.6.2 Close Relation to Gaussian Elimination	20
1.6.3 A Generalized Schur Algorithm	20
1.6.4 Array Derivation of the Algorithm	22
1.6.5 An Elementary Section	28
1.6.6 A Simple Example	29
1.7 Proper Form of the Fast Algorithm	30
1.7.1 Positive Steps	30
1.7.2 Negative Steps	31
1.7.3 Statement of the Algorithm in Proper Form	32
1.7.4 A Transmission Line Cascade	32
1.7.5 Shift-Structured ( $F=Z$ ) Positive-Definite Matrices	33
1.7.6 The Classical Schur Algorithm	34
1.7.7 The Special Case of Toeplitz Matrices	36

---

1.8	Some Applications in Matrix Computation	36
1.8.1	Going Beyond $F=Z$	37
1.8.2	Simultaneous Factorization of $T$ and $T^{-1}$	37
1.8.3	QR Factorization of Structured Matrices	39
1.8.4	Avoiding Back-Substitution in Linear Equations	40
1.9	Look-Ahead (Block) Schur Algorithm	40
1.10	Fast Inversion of Structured Matrices	43
1.10.1	Schur Construction (Inflation)	44
1.10.2	Statement of the Fast Inversion Algorithm	46
1.10.3	Algorithm Development	47
1.10.4	An Example	49
1.10.5	Proper Form of the Algorithm	50
1.10.6	Application to Pick Matrices	52
1.10.7	The Degenerate Case	53
1.11	Non-Hermitian Toeplitz-like Matrices	54
1.12	Schur Algorithm for Hankel-Like Matrices	55
1.13	Structured Matrices and Pivoting	57
1.13.1	Incorporating Pivoting into Generalized Schur Algorithms	57
1.13.2	Transformations to Cauchy-Like Structures	59
1.13.3	Numerical Issues	60
1.14	Some Further Issues	61
1.14.1	Incorporating State-Space Structure	62
1.14.2	Iterative Methods	63
1.14.3	Interpolation Problems	64
1.14.4	Inverse Scattering	65
<b>2</b>	<b>STABILIZED SCHUR ALGORITHMS</b>	<b>68</b>
2.1	Introduction	69
2.2	Contribution and Problems	69
2.3	Related Works in the Literature	70
2.3.1	Notation	72
2.3.2	Brief Review of Displacement Structure	72
2.4	The Generalized Schur Algorithm	74
2.5	A Limit to Numerical Accuracy	77
2.6	Implementations of the Hyperbolic Rotation	79
2.6.1	Direct Implementation	79
2.6.2	Mixed Downdating	80

---

2.6.3	The OD Procedure	80
2.6.4	The H Procedure	82
2.7	Implementation of the Blaschke Matrix	83
2.7.1	The Case of Diagonal F	83
2.7.2	The Case of Strictly-Lower Triangular F	84
2.8	Enforcing Positive-Definiteness	85
2.9	Accuracy of the Factorization	85
2.10	Pivoting with Diagonal F	87
2.10.1	A Numerical Example	88
2.10.2	The Case of Positive F	88
2.10.3	The Non-Positive Case	89
2.11	Controlling the Generator Growth	89
2.12	Solution of Linear Systems of Equations	90
2.12.1	Computing the Matrix R	90
2.12.2	Iterative Refinement	91
2.13	Enhancing the Robustness of the Algorithm	91
2.13.1	Enhancing the OD Method	92
2.13.2	Enhancing the H Procedure	93
2.13.3	A Numerical Example	93
2.14	Results for the Positive-Definite Case	94
2.A	Pseudo-Code for the Stable Schur Algorithm	96
<b>3</b>	<b>FAST STABLE SOLVERS FOR STRUCTURED LINEAR SYSTEMS</b>	<b>100</b>
3.1	Introduction	101
3.2	Overview of the Proposed Solution	102
3.3	The Generalized Schur Algorithm for Indefinite Matrices	103
3.4	Fast QR Factorization of Shift-Structured Matrices	106
3.4.1	The Toeplitz Case	108
3.4.2	Other Augmentations	109
3.5	Well-Conditioned Coefficient Matrices	110
3.5.1	Implementation of the Hyperbolic Rotation	111
3.5.2	Avoiding Breakdown	113
3.5.3	Error Analysis of the Last Steps	114
3.5.4	Summary	114
3.5.5	Solving the Linear System of Equations	115
3.6	Ill-Conditioned Coefficient Matrices	115
3.6.1	Solving the Linear System of Equations	116

---

3.6.2	Conditions on the Coefficient Matrix	117
3.7	Summary of the Algorithm	117
<b>4</b>	<b>STABILITY OF FAST ALGORITHMS FOR STRUCTURED LINEAR SYSTEMS</b>	<b>121</b>
4.1	Introduction	122
4.1.1	Outline	123
4.1.2	Notation	124
4.2	Stability and Weak Stability	124
4.2.1	Gaussian Elimination With Pivoting	125
4.2.2	Weak Stability	126
4.2.3	Example: Orthogonal Factorization	127
4.3	Classes of Structured Matrices	128
4.3.1	Cauchy and Cauchy-Like Matrices	128
4.3.2	Toeplitz Matrices	129
4.4	Structured Gaussian Elimination	129
4.4.1	The GKO-Toeplitz Algorithm	130
4.4.2	Error Analysis	131
4.4.3	A General Strategy	132
4.5	Positive-Definite Structured Matrices	133
4.5.1	The Bareiss Algorithm for Positive-Definite Matrices	133
4.5.2	Generalized Schur Algorithms	134
4.6	Fast Orthogonal Factorization	135
4.6.1	Use of the Semi-Normal Equations	135
4.6.2	Computing Q Stably	136
4.6.3	Solution of Indefinite or Unsymmetric Structured Systems	136
4.7	Concluding Remarks	137
<b>5</b>	<b>ITERATIVE METHODS FOR LINEAR SYSTEMS WITH MATRIX STRUCTURE</b>	<b>138</b>
5.1	Introduction	139
5.2	The Conjugate Gradient Method	139
5.3	Iterative Methods for Solving Toeplitz Systems	143
5.3.1	Preconditioning	145
5.3.2	Circulant Matrices	146
5.3.3	Toeplitz Matrix-Vector Multiplication	147
5.3.4	Circulant Preconditioners	148
5.4	Band-Toeplitz Preconditioners	154

---

5.5	Toeplitz-Circulant Preconditioners	156
5.6	Preconditioners for Structured Linear Systems	158
5.6.1	Toeplitz-Like Systems	158
5.6.2	Toeplitz-Plus-Hankel Systems	162
5.7	Toeplitz-Plus-Band Systems	165
5.8	Applications	166
5.8.1	Linear-Phase Filtering	166
5.8.2	Numerical Solutions of Biharmonic Equations	168
5.8.3	Queueing Networks with Batch Arrivals	170
5.8.4	Image Restorations	175
5.9	Concluding Remarks	177
5.A	Proof of Theorem 5.3.4	178
5.B	Proof of Theorem 5.6.2	180
<b>6</b>	<b>ASYMPTOTIC SPECTRAL DISTRIBUTION OF TOEPLITZ-RELATED MATRICES</b>	<b>182</b>
6.1	Introduction	183
6.2	What is Spectral Distribution?	183
6.3	Toeplitz Matrices and Shift-Invariance	187
6.3.1	Spectral Distribution of Toeplitz Matrices	189
6.3.2	Unbounded Generating Function	193
6.3.3	Eigenvalues in the Non-Hermitian Case	194
6.3.4	The Szegő Formula for Singular Values	196
6.4	Multilevel Toeplitz Matrices	198
6.5	Block Toeplitz Matrices	203
6.6	Combining Block and Multilevel Structure	207
6.7	Locally Toeplitz Matrices	209
6.7.1	A Closer Look at Locally Toeplitz Matrices	212
6.7.2	Spectral Distribution of Locally Toeplitz Sequences	217
6.8	Concluding Remarks	222
<b>7</b>	<b>NEWTON'S ITERATION FOR STRUCTURED MATRICES</b>	<b>225</b>
7.1	Introduction	226
7.2	Newton's Iteration for Matrix Inversion	227
7.3	Some Basic Results on Toeplitz-like Matrices	229
7.4	The Newton-Toeplitz Iteration	232
7.4.1	Bounding the Displacement Rank	232
7.4.2	Convergence Rate and Computational Complexity	234

7.4.3	An Approach Using f-Circulant Matrices	236
7.5	Residual Correction Method	239
7.5.1	Application to Matrix Inversion	239
7.5.2	Application to a Linear System of Equations	239
7.5.3	Application to a Toeplitz Linear System of Equations	240
7.5.4	Estimates for the Convergence Rate	242
7.6	Numerical Experiments	244
7.7	Concluding Remarks	245
7.A	Correctness of Algorithm 7.4.2	248
7.B	Correctness of Algorithm 7.5.1	249
7.C	Correctness of Algorithm 7.5.2	250
<b>8</b>	<b>FAST ALGORITHMS WITH APPLICATIONS TO MARKOV CHAINS AND QUEUEING MODELS</b>	<b>251</b>
8.1	Introduction	252
8.2	Toeplitz Matrices and Markov Chains	253
8.2.1	Modeling of Switches and Network Traffic Control	255
8.2.2	Conditions for Positive Recurrence	256
8.2.3	Computation of the Probability Invariant Vector	257
8.3	Exploitation of Structure and Computational Tools	259
8.3.1	Block Toeplitz Matrices and Block Vector Product	260
8.3.2	Inversion of Block Triangular Block Toeplitz Matrices	264
8.3.3	Power Series Arithmetic	266
8.4	Displacement Structure	267
8.5	Fast Algorithms	269
8.5.1	The Fast Ramaswami Formula	270
8.5.2	A Doubling Algorithm	271
8.5.3	Cyclic Reduction	274
8.5.4	Cyclic Reduction for Infinite Systems	278
8.5.5	Cyclic Reduction for Generalized Hessenberg Systems	285
8.6	Numerical Experiments	287
<b>9</b>	<b>TENSOR DISPLACEMENT STRUCTURES AND POLYSPECTRAL MATCHING</b>	<b>291</b>
9.1	Introduction	292
9.2	Motivation for Higher-Order Cumulants	292
9.3	Second-Order Displacement Structure	296
9.4	Tucker Product and Cumulant Tensors	299

---

9.5	Examples of Cumulants and Tensors	302
9.6	Displacement Structure for Tensors	305
9.6.1	Relation to the Polyspectrum	307
9.6.2	The Linear Case	310
9.7	Polyspectral Interpolation	314
9.8	A Schur-Type Algorithm for Tensors	318
9.8.1	Review of Second-Order Case	318
9.8.2	A Tensor Outer Product	320
9.8.3	Displacement Generators	323
9.9	Concluding Remarks	327
<b>10</b>	<b>MINIMAL COMPLEXITY REALIZATION OF STRUCTURED MATRICES</b>	<b>329</b>
10.1	Introduction	330
10.2	Motivation of Minimal Complexity Representations	330
10.3	Displacement Structure	332
10.4	Realization Theory for Matrices	333
10.4.1	Nerode Equivalence and Natural State Spaces	336
10.4.2	Algorithm for Finding a Realization	337
10.5	Realization of Low Displacement Rank Matrices	340
10.6	A Realization for the Cholesky Factor	343
10.7	Discussion	349
<b>A</b>	<b>USEFUL MATRIX RESULTS</b>	<b>352</b>
A.1	Some Matrix Identities	353
A.2	The Gram-Schmidt Procedure and the QR Decomposition	359
A.3	Matrix Norms	360
A.4	Unitary and J-Unitary Transformations	361
A.5	Two Additional Results	363
<b>B</b>	<b>ELEMENTARY TRANSFORMATIONS</b>	<b>365</b>
B.1	Elementary Householder Transformations	366
B.2	Elementary Circular or Givens Rotations	369
B.3	Hyperbolic Transformations	371
	<b>BIBLIOGRAPHY</b>	<b>381</b>
