

# **FINITELY GENERATED COMMUTATIVE MONOIDS**

**J. C. ROSALES AND P. A. GARCÍA-SÁNCHEZ**

**Nova Science Publishers, Inc.**  
*Commack, New York*

# Contents

Preface	ix
Acknowledgements	xiii
Chapter 1. Basic definitions and results	1
Remarks	6
Exercises	6
Chapter 2. Finitely generated commutative groups	9
1. Bases and rank of a subgroup of $\mathbb{Z}^n$	9
2. Equivalence of matrices with integer entries and invariant factors	12
3. Some practical results concerning the computation of a basis	20
Remarks	23
Exercises	23
Chapter 3. Finitely generated cancellative monoids	25
1. Finitely generated cancellative torsion free monoids	27
2. Finitely generated cancellative reduced monoids	28
3. Finite cancellative monoids	32
Remarks	33
Exercises	33
Chapter 4. Minkowski-Farkas' lemma and its applications to monoids	35
1. Main result and algorithms	35
2. Applications to monoids	41
Remarks	45
Exercises	45
Chapter 5. Finitely generated monoids are finitely presented	47
1. Linear admissible orders	47
2. Rédei's theorem	50
3. The word problem for monoids	52
4. Cyclic monoids	53
Remarks	54
Exercises	54
Chapter 6. The word problem for monoids	57

1. Reduced systems of generators of a congruence	57
2. Canonical systems of generators of a congruence	59
3. The group of units of a monoid	65
Remarks	69
Exercises	70
<b>Chapter 7. Nonnegative integer solutions of systems of linear equations</b>	<b>73</b>
1. Nonnegative integer solutions of a system of linear homogeneous Diophantine equations	73
2. The monoid of nonnegative elements of a subgroup of $\mathbb{Z}^n$	77
3. Nonnegative integer solutions of systems of linear Diophantine equations	80
4. Normal affine semigroups	81
Remarks	83
Exercises	84
<b>Chapter 8. Computing presentations of finitely generated cancellative monoids</b>	<b>85</b>
1. Primitive elements of a congruence	85
2. Computing presentations of finitely generated cancellative monoids	87
3. Deciding whether a monoid is cancellative	90
Remarks	91
Exercises	91
<b>Chapter 9. Minimal presentations of finitely generated cancellative reduced monoids</b>	<b>93</b>
1. Characterization of minimal presentations of finitely generated cancellative reduced monoids	93
2. The affine case	96
Remarks	102
Exercises	103
<b>Chapter 10. Numerical semigroups</b>	<b>105</b>
1. Minimal presentations of numerical semigroups	108
2. A bound for the cardinality of minimal presentations of numerical semigroups	110
3. Numerical semigroups with maximal embedding dimension	113
Remarks	116
Exercises	117
<b>Chapter 11. Projections of congruences</b>	<b>119</b>
1. Presentations of finitely generated cancellative monoids as projections of affine semigroups	119
2. Lifting some projections	123
Remarks	127
Exercises	127

Chapter 12. Finite torsion free monoids	129
1. Presentations of finite torsion free monoids	129
2. Finite lattices	130
3. Finite Boolean algebras	133
4. Boolean monoids	137
Remarks	139
Exercises	140
Chapter 13. Archimedean Components	143
1. Computing the Archimedean components of a finitely generated monoid	145
Remarks	150
Exercises	150
Chapter 14. Separative monoids	153
1. Separative monoids and their Archimedean components	153
2. Deciding whether the quotient of an ideal of $\mathbb{N}^n$ by a congruence is cancellative	155
3. Elimination	158
4. Deciding whether a finitely generated monoid is separative	158
5. Deciding whether a finitely generated monoid is torsion free	160
6. $\mathcal{N}$ -semigroups	162
Remarks	167
Exercises	167
Appendix A. Graphs	169
Bibliography	171
Index of notation	175
Index of main results and algorithms	177
Index	183
