South San Francisco, CA 94080, USA) (*requests for offprints)*

Antonie van Leeuwenhoek **60** (3/4): 355–371, 1991

On pages 358 and 359, in the sentence: “*Some examples of lower detection limits (50 µl sample-injection) at which reliable quantitation is still possible are 20 mM (RI) for glucose and pyruvate, 50 mM (RI) for succinate, lactic, acetic and formic acid and 250 mM for butane-diol, ethanol and glycerol (RI).*”, the concentration “mM” (millimolar) should be “µM” (micromolar).
