John Wiley & Sons, Inc., New York · London · Sydney

Contents

CHAPTER 1. **Methods, Theory, and Practices in Optimal Control Synthesis** **1**

1.1. Examples of optimal control problems 1
1.2. Statement of general optimal control problem 23
1.3. Results on controllability 31
1.4. Extremal and maximal properties of optimal controllers and synthesis 36
1.5. Synthesis of optimal controllers for second order linear processes 40

Appendix I. Geometric theory of ordinary differential equations 51

Appendix II. Algebraic theory of linear differential equations 59

CHAPTER 2. **Optimal Control of Linear Systems** **67**

2.1. The linear control process 67
2.2. Controllability: The set of attainability 68
2.3. Controllability and stability for autonomous systems 80
2.4. Controllability and observability 104
2.5. Time optimal control for linear processes 127

Appendix. Convex sets 155

CHAPTER 3. **Optimal Control for Linear Processes with Integral Convex Cost Criteria** **169**

3.1. Significance of integral cost criteria 169
3.2. Integral quadratic cost criteria 170
3.3. Illustrative examples and special problems 188
3.4. Integral convex cost criteria 206
3.5. Integral convex cost criteria with bounded controllers 231

CHAPTER 4. **The Maximal Principle and the Existence of Optimal Controllers for Nonlinear Processes** **239**

4.1. Geometry of the set of attainability 239
4.2. Existence of optimal control with magnitude restraints 259
4.3. Existence of optimal control without magnitude restraints 286

CHAPTER 5. **Necessary and Sufficient Conditions for Optimal Control** **308**

5.1. The maximal principle with necessary transversality conditions 308
5.2. Sufficiency conditions for an optimal controller 340

CHAPTER 6. **Control System Properties: Controllability, Observability, and Stability** **364**

6.1. Controllability and observability of nonlinear processes 364
6.2. Global stability of nonlinear processes 394

CHAPTER 7. **Synthesis of Optimal Controllers for Some Basic Nonlinear Control Processes** **423**

7.1. Synthesis of time optimal feedback controllers for second order nonlinear systems with one degree of freedom 425
7.2. Optimal steering for sounding rockets 456
7.3. Angular velocity control for rigid body 466
7.4. Optimal guidance between planetary orbits 473

Appendix A. **Steepest descent and computational techniques for optimal control problems** **481**

Appendix B. **Bibliography on optimal processes governed by ordinary and partial functional-differential systems** **521**
