CONTENTS

INTRODUCTION TO THE SERIES	xi
PREFACE	xiii
CHAPTER 1	
INTRODUCTION	1
1.1 The scale of ultraprecision	1
1.2 Instrumentation terms	5
1.3 Errors	7
1.3.1 Random errors and noise	8
1.3.2 Error combination	13
References	15
CHAPTER 2	
INTRODUCTORY MECHANICS	17
Introduction	17
2.1 Statics, elasticity and beam distortion	18
2.1.1 Elementary elasticity	19
2.1.2 Bending of symmetrical beams	21
2.2 Rigid body dynamics and Lagrange's equation	25
2.3 Vibration behaviour of beams	33
2.3.1 Longitudinal vibration of a beam	34
2.3.2 Transverse vibration of beams	36
2.3.3 Rayleigh's method	38
References	41

CONTENTS

CHAPTER 3	
FUNDAMENTAL CONCEPTS IN PRECISION DESIGN	43
Introduction	43
3.1 Kinematics of constraint	44
3.1.1 Coordinate systems	44
3.1.2 Basic point constraints	47
3.1.3 Point constraints and relative freedom	51
3.1.4 Kinematic clamps	54
3.2 Mobility and the kinematics of mechanisms	56
3.2.1 Mechanism mobility	56
3.2.2 Kinematics of plane mechanisms	58
3.3 Pseudo-kinematic design or elastic design	60
3.3.1 Load bearing, area contact and elastic averaging	60
3.3.2 Kinematic analogy to real systems	63
3.4 Measurement and force loops	66
3.5 Principles of alignment	70
3.5.1 'Cosine' errors	70
3.5.2 Abbe offset	72
3.6 Nulling	73
3.7 Compensation	75
3.7.1 Mechanical compensation strategies	76
3.7.2 Computer compensation of systematic errors	80
3.8 Symmetry	83
3.9 The effects of scaling: Stiffness and dynamic response	84
3.10 Case study: A proposed nanohardness indentation instrument . . .	89
References	93
CHAPTER 4	
FLEXURE DESIGN FOR POSITIONING AND CONTROL	95
4.1 A simple flexure design	95
4.2 The pros and cons of flexure design	99
4.2.1 The advantages of flexures	99
4.2.2 The disadvantages of flexures	100
4.3 Linear spring mechanisms	100
4.3.1 Simple and compound leaf spring mechanisms	100

4.3.2	Notch type spring mechanisms	104
4.3.3	Kinematic analysis of linear spring mechanisms	108
4.3.4	Additional considerations with compound spring designs	115
4.4	Angular motion flexures	117
4.5	Dynamic characteristics of flexure mechanisms	120
4.6	Case studies	123
4.6.1	X-ray interferometry	123
4.6.2	The measurement of friction between a diamond stylus and specimen	126
	References	128

CHAPTER 5

DRIVE COUPLINGS AND THE MECHANICS OF CONTACT 131

	Introduction	131
5.1	Surface contact under different load conditions	132
5.1.1	Stationary and sliding contacts of a sphere and a flat	132
5.1.2	Rolling contacts	136
5.2	Linear drive couplings	138
5.3	Rotary drive couplings	143
5.3.1	Elastic rotary couplings	143
5.3.2	Rolling rotary couplings (the knife edge)	147
5.3.3	The sliding rotary coupling	149
5.4	Case study: Irving Langmuir's surface tension instrument for the determination of the molecular sizes of fatty acids	150
	References	153

CHAPTER 6

LEVER MECHANISMS OF HIGH RESOLUTION 155

	Introduction: Generalized leverage	155
6.1	The effects of levers	160
6.2	Angular levers	162
6.2.1	The pulley drive	163
6.2.2	The wedge	164
6.2.3	Angular gearboxes and friction drives	165
6.2.4	Balanced torque actuation	168

CONTENTS

6.3	Linear levers	171
6.4	Case studies	176
6.4.1	The Marsh micro-tensile tester	176
6.4.2	The Ångstrom ruler	178
	References	180

CHAPTER 7

ACTUATORS AND SENSORS FOR CONTROLLED DISPLACEMENTS

181

	Introduction	181
7.1	Types of actuator	182
7.1.1	Piezoelectric drives	182
7.1.2	Electrostrictive	187
7.1.3	Mechanical micrometers	188
7.1.4	Friction drives	189
7.1.5	Magnetostrictive	191
7.1.6	Magnetoelasticity	192
7.1.7	Shape memory alloys and bimetallic strips	193
7.1.8	Electromagnetic	194
7.1.9	Electrostatic	198
7.1.10	Hydraulic	200
7.1.11	The Poisson's ratio drive	201
7.2	Summary of actuator performance	201
7.3	Nanometric displacement sensors	205
7.3.1	Inductive gauging	205
7.3.2	Capacitive gauging	206
7.3.3	Optical transducers	208
7.3.4	Proximity probes for scanning tip microscopes	210
7.3.5	Eddy current sensors	213
7.3.6	Strain gauges	213
	References	215

CHAPTER 8

MATERIALS SELECTION IN PRECISION MECHANICAL DESIGN

221

	Introduction	221
--	------------------------	-----

8.1	Design, materials and function	222
8.2	Property groupings and charts	225
8.3	Property profiles in precision engineering	229
8.3.1	Mechanical property groups	230
8.3.2	Thermal property groups	231
8.3.3	Material profiles	233
8.4	Materials properties	236
8.4.1	Metals	236
8.4.2	Ceramics and glasses	238
8.4.3	Polymers and composites	241
8.4.4	Non-conventional materials for small devices	243
8.5	Materials for transducers	245
8.6	Case studies	246
8.6.1	Simple flexure mechanism	246
8.6.2	Talystep revisited	248
	References	253

CHAPTER 9

	SLIDEWAYS FOR LONG RANGE PRECISION MOTION	255
	Introduction	255
9.1	Sources of error in bearing slideways	256
9.2	Fluid film bearings	263
9.2.1	Air or oil hydrostatic bearings	263
9.2.2	Hydrodynamic rotary bearings	267
9.3	Lubrication with lamellar solids	269
9.3.1	Frictional behaviour of graphite	270
9.3.2	Frictional behaviour of molybdenum disulphide	271
9.4	Dry or boundary lubrication	271
9.4.1	Liquid film boundary lubrication	272
9.4.2	Polymer bearings	272
9.5	Case studies	276
9.5.1	Nanosurf II	276
9.5.2	Molecular measuring machine	279
9.5.3	Super stiff grinding machine slides	280
	References	281

CONTENTS

CHAPTER 10	
THE DYNAMICS OF INSTRUMENTATION MECHANISMS	285
10.1 The simple oscillator	285
10.2 Response of a second order spring/mass/viscous damper system .	288
10.2.1 Standard forms of the equation of motion	289
10.2.2 Response to a step change of force	291
10.2.3 Steady state response to a harmonically varying input force	292
10.2.4 Response to a harmonic displacement: Seismic isolation	296
10.3 Harmonic response of series spring-mass-damper systems	298
10.3.1 Response of two stage seismic isolator	299
10.3.2 Multi-stage isolation	303
10.4 Measurement of the viscous damping coefficient	305
10.5 The design of resonant systems: Followers and isolators	306
10.5.1 Stylus tracking	307
10.5.2 Vibration isolation	309
10.5.3 Noise isolation	312
10.6 Damping of small vibrations	313
10.7 Case studies	316
10.7.1 An atomic force probe	317
10.7.2 A gravity wave antenna	319
References	320
APPENDIX A	323
Airy point mounting of datum bars	323
AUTHOR INDEX	325
SUBJECT INDEX	333
