# CONTENTS

Foreword .....	xv
Preface to the English edition .....	xvii
Preface .....	xix
Introduction .....	xxiii
Notation of the main forms of fractional integrals and derivatives .....	xxv
Brief historical outline .....	xxvii
 Chapter 1 – Fractional Integrals and Derivatives on an Interval .....	 1
§1. Preliminaries .....	1
1.1. The spaces $H^\lambda$ and $H^\lambda(\rho)$ .....	1
1.2. The spaces $L_p$ and $L_p(\rho)$ .....	7
1.3. Some special functions .....	14
1.4. Integral transforms .....	23
§2. Riemann-Liouville Fractional Integrals and Derivatives ....	28
2.1. The Abel integral equation .....	29
2.2. On the solvability of the Abel equation in the space of integrable functions .....	30
2.3. Definition of fractional integrals and derivatives and their simplest properties .....	33
2.4. Fractional integrals and derivatives of complex order .....	38
2.5. Fractional integrals of some elementary functions .....	40
2.6. Fractional integration and differentiation as reciprocal operations .....	43
2.7. Composition formulae. Connection with semigroups of operators .....	46

<b>§3. The Fractional Integrals of Hölder and Summable Functions</b>	<b>53</b>
3.1. Mapping properties in the space $H^\lambda$ .....	53
3.2. Mapping properties in the space $H_0^\lambda(\rho)$ .....	57
3.3. Mapping properties in the space $L_p$ .....	66
3.4. Mapping properties in the space $L_p(\rho)$ .....	70
<b>§4. Bibliographical Remarks and Additional Information to Chapter 1</b> .....	<b>82</b>
4.1. Historical notes .....	82
4.2. Survey of other results (relating to §§1-3) .....	84
<b>Chapter 2 – Fractional Integrals and Derivatives on the Real Axis and Half-Axis</b> .....	<b>93</b>
<b>§5. The Main Properties of Fractional Integrals and Derivatives</b>	<b>93</b>
5.1. Definitions and elementary properties .....	93
5.2. Fractional integrals of Hölderian functions .....	98
5.3. Fractional integrals of summable functions .....	102
5.4. The Marchaud fractional derivative .....	109
5.5. The finite part of integrals due to Hadamard .....	112
5.6. Properties of finite differences and Marchaud fractional derivatives of order $\alpha > 1$ .....	116
5.7. Connection with fractional power of operators .....	120
<b>§6. Representation of Function by Fractional Integrals of <math>L_p</math>-Functions</b> .....	<b>122</b>
6.1. The space $I^\alpha(L_p)$ .....	122
6.2. Inversion of fractional integrals of $L_p$ -functions .....	123
6.3. Characterization of the space $I^\alpha(L_p)$ .....	127
6.4. Sufficiency conditions for the representability of functions by fractional integrals .....	131
6.5. On the integral modulus of continuity of $I^\alpha(L_p)$ -functions ...	136
<b>§7. Integral Transforms of Fractional Integrals and Derivatives</b>	<b>137</b>
7.1. The Fourier transform .....	137
7.2. The Laplace transform .....	140
7.3. The Mellin transform .....	142
<b>§8. Fractional Integrals and Derivatives of Generalized Functions</b> .....	<b>145</b>
8.1. Preliminary ideas .....	145
8.2. The case of the axis $R^1$ . Lizorkin's space of test functions ...	146

8.3. Schwartz's approach.....	154
8.4. The case of the half-axis. The approach via the adjoint operator.....	155
8.5. McBride's spaces.....	157
8.6. The case of an interval.....	159
<b>§9. Bibliographical Remarks and Additional Information to Chapter 2.....</b>	<b>160</b>
9.1. Historical notes.....	160
9.2. Survey of other results (relating to §§ 5-8).....	163
9.3. Tables of fractional integrals and derivatives.....	172
<b>Chapter 3 – Further Properties of Fractional Integrals and Derivatives.....</b>	<b>175</b>
<b>§10. Compositions of Fractional Integrals and Derivatives with Weights.....</b>	<b>175</b>
10.1. Compositions of two one-sided integrals with power weights.....	176
10.2. Compositions of two-sided integrals with power weights.....	189
10.3. Compositions of several integrals with power weights.....	191
10.4. Compositions with exponential and power-exponential weights.....	195
<b>§11. Connection between Fractional Integrals and the Singular Operator.....</b>	<b>199</b>
11.1. The singular operator $S$ .....	199
11.2. The case of the whole line.....	202
11.3. The case of an interval and a half-axis.....	204
11.4. Some other composition relations.....	210
<b>§12. Fractional Integrals of the Potential Type.....</b>	<b>213</b>
12.1. The real axis. The Riesz and Feller potentials.....	214
12.2. On the "truncation" of the Riesz potential to the half-axis..	218
12.3. The case of the half-axis.....	221
12.4. The case of a finite interval.....	222
<b>§13. Functions Representable by Fractional Integrals on an Interval.....</b>	<b>224</b>
13.1. The Marchaud fractional derivative on an interval.....	224
13.2. Characterization of fractional integrals of functions in $L_p$ ...	229
13.3. Continuation, restriction and "sewing" of fractional integrals	234
13.4. Characterization of fractional integrals of Hölderian functions	238

13.5. Fractional integration in the union of weighted Hölder spaces	246
13.6. Fractional integrals and derivatives of functions with a prescribed continuity modulus	249
<b>§14. Miscellaneous Results for Fractional Integro-differentiation of Functions of a Real Variable</b>	<b>254</b>
14.1. Lipschitz spaces $H_p^\lambda$ and $\tilde{H}_p^\lambda$	254
14.2. Mapping properties of fractional integration in $H_p^\lambda$	256
14.3. Fractional integrals and derivatives of functions which are given on the whole line and belong to $H_p^\lambda$ on every finite interval	261
14.4. Fractional derivatives of absolutely continuous functions	267
14.5. The Riesz mean value theorem and inequalities for fractional integrals and derivatives	270
14.6. Fractional integration and the summation of series and integrals	275
<b>§15. The Generalized Leibniz Rule</b>	<b>277</b>
15.1. Fractional integro-differentiation of analytic functions on the real axis	277
15.2. The generalized Leibniz rule	280
<b>§16. Asymptotic Expansions of Fractional Integrals</b>	<b>285</b>
16.1. Definitions and properties of asymptotic expansions	285
16.2. The case of a power asymptotic expansion	287
16.3. The case of a power-logarithmic asymptotic expansion	294
16.4. The case of a power-exponential asymptotic expansion	297
16.5. The asymptotic solution of Abel's equation	299
<b>§17. Bibliographical Remarks and Additional Information to Chapter 3</b>	<b>301</b>
17.1. Historical notes	301
17.2. Survey of other results (relating to §§ 10-16)	305
<b>Chapter 4 – Other Forms of Fractional Integrals and Derivatives</b>	<b>321</b>
<b>§18. Direct Modifications and Generalizations of Riemann-Liouville Fractional Integrals</b>	<b>321</b>
18.1. Erdélyi-Kober-type operators	322
18.2. Fractional integrals of a function by another function	325
18.3. Hadamard fractional integro-differentiation	329

18.4. One-dimensional modification of Bessel fractional integro-differentiation and the spaces $H^{s,p} = L_p^s$ .....	333
18.5. The Chen fractional integral .....	338
18.6. Dzherbashyan's generalized fractional integral .....	344
<b>§19. Weyl Fractional Integrals and Derivatives of Periodic Functions</b> .....	<b>347</b>
19.1. Definitions. Connections with Fourier series .....	347
19.2. Elementary properties of Weyl fractional integrals .....	352
19.3. Other forms of fractional integration of periodic functions ...	354
19.4. The coincidence of Weyl and Marchaud fractional derivatives	356
19.5. The representability of periodic functions by the Weyl fractional integral .....	358
19.6. Weyl fractional integration and differentiation in the space of Hölderian functions .....	361
19.7. Weyl fractional integrals and derivatives of periodic functions in $H_p^\lambda$ .....	367
19.8. The Bernstein inequality for fractional integrals of trigonometric polynomials .....	368
<b>§20. An Approach to Fractional Integro-differentiation via Fractional Differences (The Grünwald-Letnikov Approach)</b>	<b>371</b>
20.1. Differences of a fractional order and their properties .....	371
20.2. Coincidence of the Grünwald-Letnikov derivative with the Marchaud derivative. The periodic case .....	376
20.3. Coincidence of the Grünwald-Letnikov derivative with the Marchaud derivative. The non-periodic case .....	382
20.4. Grünwald-Letnikov fractional differentiation on a finite interval .....	385
<b>§21. Operators with Power-Logarithmic Kernels</b> .....	<b>388</b>
21.1. Mapping properties in the space $H^\lambda$ .....	389
21.2. Mapping properties in the space $H_0^\lambda(\rho)$ .....	396
21.3. Mapping properties in the space $L_p$ .....	401
21.4. Mapping properties in the space $L_p(\rho)$ .....	404
21.5. Asymptotic expansions .....	411
<b>§22. Fractional Integrals and Derivatives in the Complex Plane</b>	<b>414</b>
22.1. Definitions and the main properties of fractional integro-differentiation in the complex plane .....	416
22.2. Fractional integro-differentiation of analytic functions .....	420
22.3. Generalization of fractional integro-differentiation of analytic functions .....	426

<b>§23. Bibliographical Remarks and Additional Information to Chapter 4</b>	<b>431</b>
23.1. Historical notes	431
23.2. Survey of other results (relating to §§ 18-22)	436
23.3. Answers to some questions put at the Conference on Fractional Calculus (New Haven, 1974)	455
 <b>Chapter 5 – Fractional Integro-differentiation of Functions of Many Variables</b>	 <b>457</b>
<b>§24. Partial and Mixed Integrals and Derivatives of Fractional Order</b>	<b>458</b>
24.1. The multidimensional Abel integral equation	458
24.2. Partial and mixed fractional integrals and derivatives	459
24.3. The case of two variables. Tensor product of operators	463
24.4. Mapping properties of fractional integration operators in the spaces $L_{\vec{p}}(R^n)$ (with mixed norm)	464
24.5. Connection with a singular integral	466
24.6. Partial and mixed fractional derivatives in the Marchaud form	468
24.7. Characterization of fractional integrals of functions in $L_{\vec{p}}(R^2)$	471
24.8. Integral transform of fractional integrals and derivatives	473
24.9. Lizorkin function space invariant relative to fractional integro-differentiation	475
24.10. Fractional derivatives and integrals of periodic functions of many variables	476
24.11. Grünwald-Letnikov fractional differentiation	479
24.12. Operators of the polypotential type	480
 <b>§25. Riesz Fractional Integro-differentiation</b>	 <b>483</b>
25.1. Preliminaries	484
25.2. The Riesz potential and its Fourier transform. Invariant Lizorkin space	489
25.3. Mapping properties of the operator $I^\alpha$ in the spaces $L_p(R^n)$ and $L_p(R^n; \rho)$	494
25.4. Riesz differentiation (hypersingular integrals)	498
25.5. Unilateral Riesz potentials	502
 <b>§26. Hypersingular Integrals and the Space of Riesz Potentials</b>	 <b>505</b>
26.1. Investigation of the normalizing constants $d_{n,l}(\alpha)$ as functions of the parameter $\alpha$	505

26.2.	Convergence of the hypersingular integral for smooth functions and diminution of order $l$ to $l > 2[\alpha/2]$ in the case of a non-centered difference .....	510
26.3.	The hypersingular integral as an inverse of a Riesz potential .....	512
26.4.	Hypersingular integrals with homogeneous characteristics ...	518
26.5.	Hypersingular integral with a homogeneous characteristic as a convolution with the distribution .....	525
26.6.	Representation of differential operators in partial derivatives by hypersingular integrals .....	527
26.7.	The space $I^\alpha(L_p)$ of Riesz potentials and its characterization in terms of hypersingular integrals. The space $L_{p,r}^\alpha(R^n)$ .....	532
<b>§27.</b>	<b>Bessel Fractional Integro-differentiation .....</b>	<b>538</b>
27.1.	The Bessel kernel and its properties .....	538
27.2.	Connections with Poisson, Gauss-Weierstrass and metaharmonic continuation semigroups.....	541
27.3.	The space of Bessel potentials .....	543
27.4.	The realization of $(E-\Delta)^{\alpha/2}$ , $\alpha > 0$ , in terms of hypersingular integrals .....	547
<b>§28.</b>	<b>Other Forms of Multidimensional Fractional Integro-differentiation .....</b>	<b>554</b>
28.1.	Riesz potential with Lorentz distance (hyperbolic Riesz potentials) .....	555
28.2.	Parabolic potentials .....	562
28.3.	The realization of the fractional powers $(-\Delta_x + \frac{\partial}{\partial t})^{\alpha/2}$ and $(E - \Delta_x + \frac{\partial}{\partial t})^{\alpha/2}$ , $\alpha > 0$ , in terms of a hypersingular integral .....	565
28.4.	Pyramidal analogues of mixed fractional integrals and derivatives .....	569
<b>§29.</b>	<b>Bibliographical Remarks and Additional Information to Chapter 5.....</b>	<b>580</b>
29.1.	Historical notes .....	580
29.2.	Survey of other results (relating to §§ 24-28) .....	584
<b>Chapter 6 – Applications to Integral Equations of the First Kind with Power and Power-Logarithmic Kernels</b>	<b>605</b>	
<b>§30.</b>	<b>The Generalized Abel Integral Equation .....</b>	<b>606</b>
30.1.	The dominant singular integral equation .....	606
30.2.	The generalized Abel equation on the whole axis.....	610
30.3.	The generalized Abel equation on an interval .....	616
30.4.	The case of constant coefficients .....	622

<b>§31. The Noether Nature of the Equation of the First Kind with Power-Type Kernels</b> .....	<b>629</b>
31.1. Preliminaries on Noether operators .....	630
31.2. The equation on the axis .....	634
31.3. Equations on a finite interval .....	646
31.4. On the stability of solutions .....	657
<b>§32. Equations with Power-Logarithmic Kernels</b> .....	<b>659</b>
32.1. Special Volterra functions and some of their properties .....	661
32.2. The solution of equations with integer non-negative powers of logarithms .....	664
32.3. The solution of equations with real powers of logarithms ....	667
<b>§33. The Noether Nature of Equations of the First Kind with Power-Logarithmic Kernels</b> .....	<b>672</b>
33.1. Imbedding theorems for the ranges of the operators $I_{a+}^{\alpha,\beta}$ and $I_{b-}^{\alpha,\beta}$ .....	673
33.2. Connection between the operators with power-logarithmic kernels and singular operator .....	674
33.3. The Noether nature of equation (33.1) .....	681
<b>§34. Bibliographical Remarks and Additional Information to Chapter 6</b> .....	<b>684</b>
34.1. Historical notes .....	684
34.2. Survey of other results (relating to §§ 30-33) .....	687
<b>Chapter 7 – Integral Equations of the First Kind with Special Functions as Kernels</b> .....	<b>695</b>
<b>§35. Some Equations with Homogeneous Kernels Involving Gauss and Legendre Functions</b> .....	<b>696</b>
35.1. Equations with the Gauss function .....	696
35.2. Equations with the Legendre function .....	699
<b>§36. Fractional Integrals and Derivatives as Integral Transforms</b> .....	<b>703</b>
36.1. Definition of the $G$ -transform. The spaces $\mathfrak{M}_{c,\gamma}^{-1}(L)$ and $L_2^{(c,\gamma)}$ and their characterization .....	704
36.2. Existence, mapping properties and representations of the $G$ -transform: .....	709
36.3. Factorization of the $G$ -transform .....	713
36.4. Inversion of the $G$ -transform .....	716
36.5. The mapping properties, factorization and inversion of fractional integrals in the spaces $\mathfrak{M}_{c,\gamma}^{-1}(L)$ and $L_2^{(c,\gamma)}$ .....	720

36.6. Other examples of factorization .....	722
36.7. Mapping properties of the $G$ -transform on fractional integrals and derivatives .....	726
36.8. Index laws for fractional integrals and derivatives .....	727
<b>§37. Equations with Non-Homogeneous Kernels .....</b>	<b>730</b>
37.1. Equations with difference kernels .....	731
37.2. Generalized operators of Hankel and Erdélyi-Kober transforms .....	737
37.3. Non-convolution operators with Bessel functions in kernels ..	741
37.4. Equation of compositional type .....	746
37.5. The $W$ -transform and its inversion .....	752
37.6. Application of fractional integrals to the inversion of the $W$ -transform .....	758
<b>§38. Applications of Fractional Integro-differentiation to the Investigation of Dual Integral Equations .....</b>	<b>761</b>
38.1. Dual Equations .....	762
38.2. Triple equations .....	768
<b>§39. Bibliographical Remarks and Additional Information to Chapter 7 .....</b>	<b>772</b>
39.1. Historical notes .....	772
39.2. Survey of other results (relating to §§ 35-38) .....	775
<b>Chapter 8 – Applications to Differential Equations .....</b>	<b>795</b>
<b>§40. Integral Representations for Solution of Partial Differential Equations of the Second Order via Analytic Functions and Their Applications to Boundary Value Problems .....</b>	<b>795</b>
40.1. Preliminaries .....	796
40.2. The representation of solutions of generalized Helmholtz two-axially symmetric equation .....	800
40.3. Boundary value problems for the generalized Helmholtz two-axially symmetric equation .....	809
<b>§41. Euler-Poisson-Darboux Equation .....</b>	<b>812</b>
41.1. Representations for solutions of the Euler-Poisson-Darboux equation .....	813
41.2. Classical and generalized solutions of the Cauchy problem ..	819
41.3. The half-homogeneous Cauchy problem in multidimensional half-space .....	823
41.4. The weighted Dirichlet and Neumann problems in a half-plane	826

<b>§42. Ordinary Differential Equations of Fractional Order .....</b>	<b>829</b>
42.1. The Cauchy-type problem for differential equations and systems of differential equations of fractional order of general form .....	830
42.2. The Cauchy-type problem for linear differential equation of fractional order .....	837
42.3. The Dirichlet-type problem for linear differential equation of fractional order .....	843
42.4. Solution of the linear differential equation of fractional order with constant coefficients in the space of generalized functions	846
42.5. The application of fractional differentiation to differential equations of integer order .....	849
<b>§43. Bibliographical Remarks and Additional Information to Chapter 8 .....</b>	<b>856</b>
43.1. Historical notes .....	856
43.2. Survey of other results (relating to §§ 40-42) .....	858
<b>Bibliography .....</b>	<b>873</b>
<b>Author Index .....</b>	<b>953</b>
<b>Subject Index .....</b>	<b>965</b>
<b>Index of Symbols .....</b>	<b>973</b>
