

Frequency Analysis of Air Quality Time Series for traffic related pollutants

O. Tchepel,^{*a} and C. Borrego^b

5

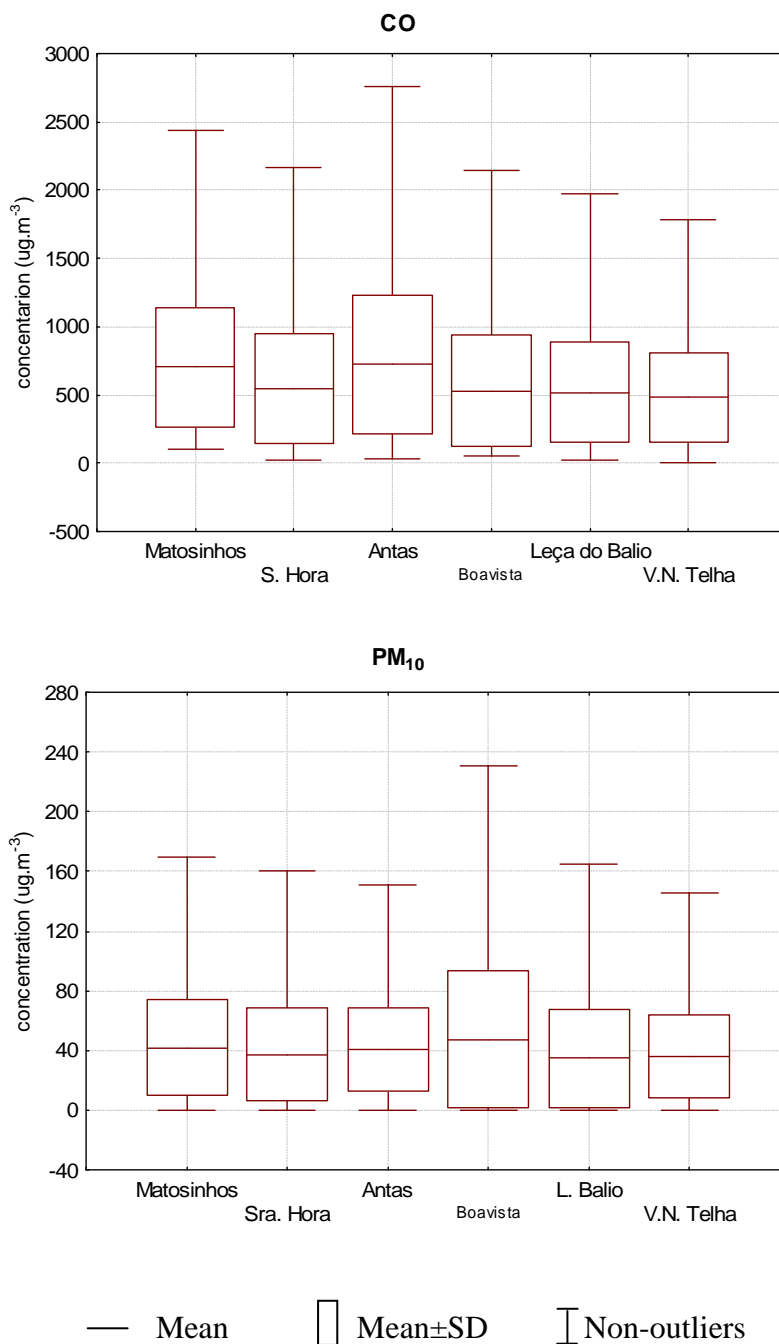

Figure 1. Box plot of the air quality measurement data for 2004

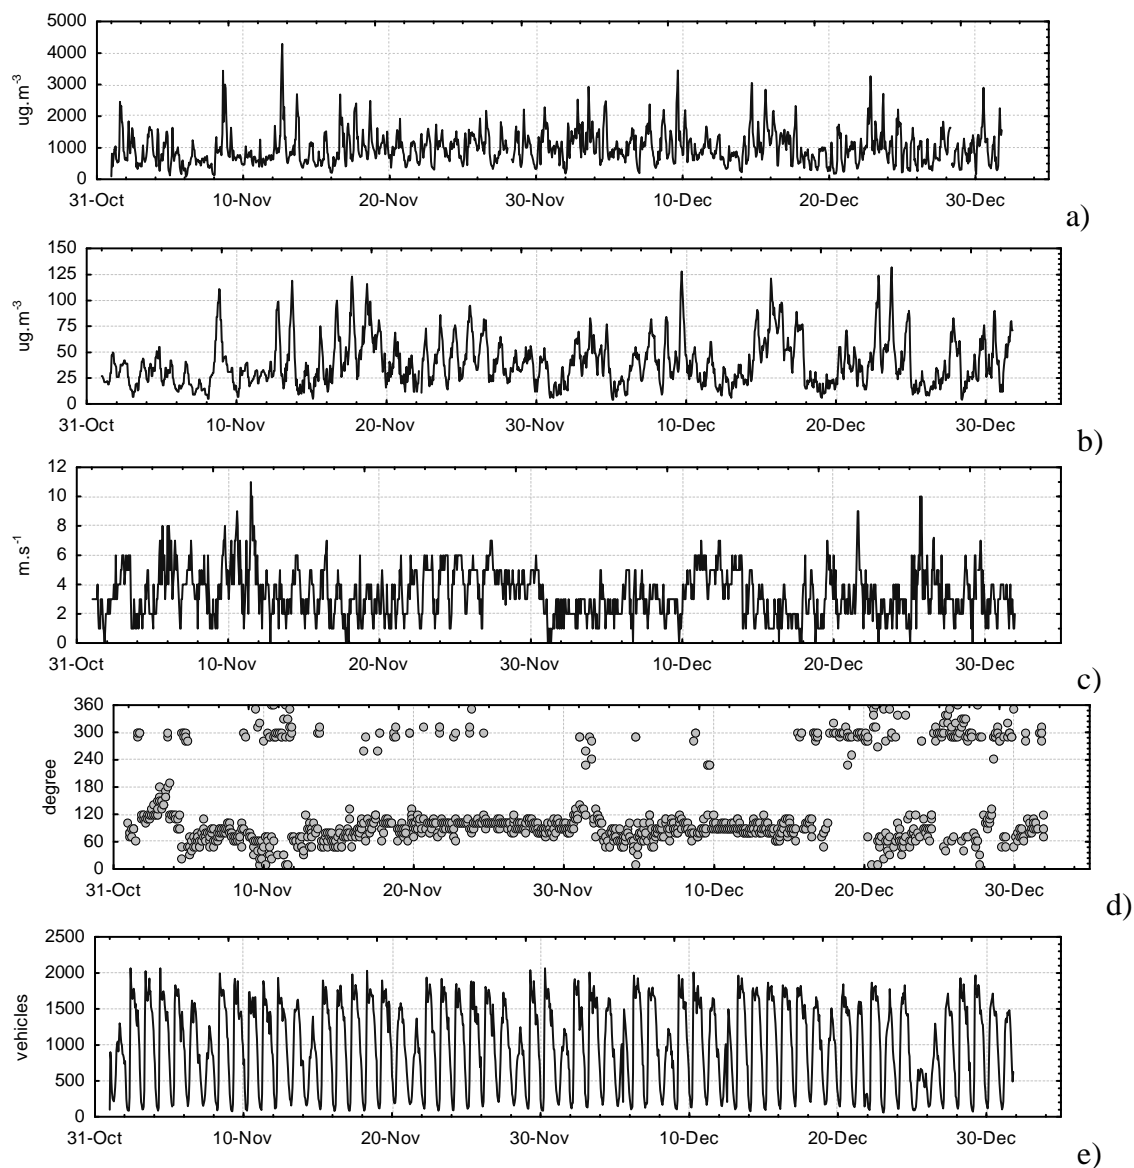

Figure 2. Data measured at Antas urban traffic station used in cross spectrum analysis: a) CO concentration, b) PM_{10} concentration, c) wind speed, d) wind direction and e) traffic counts.

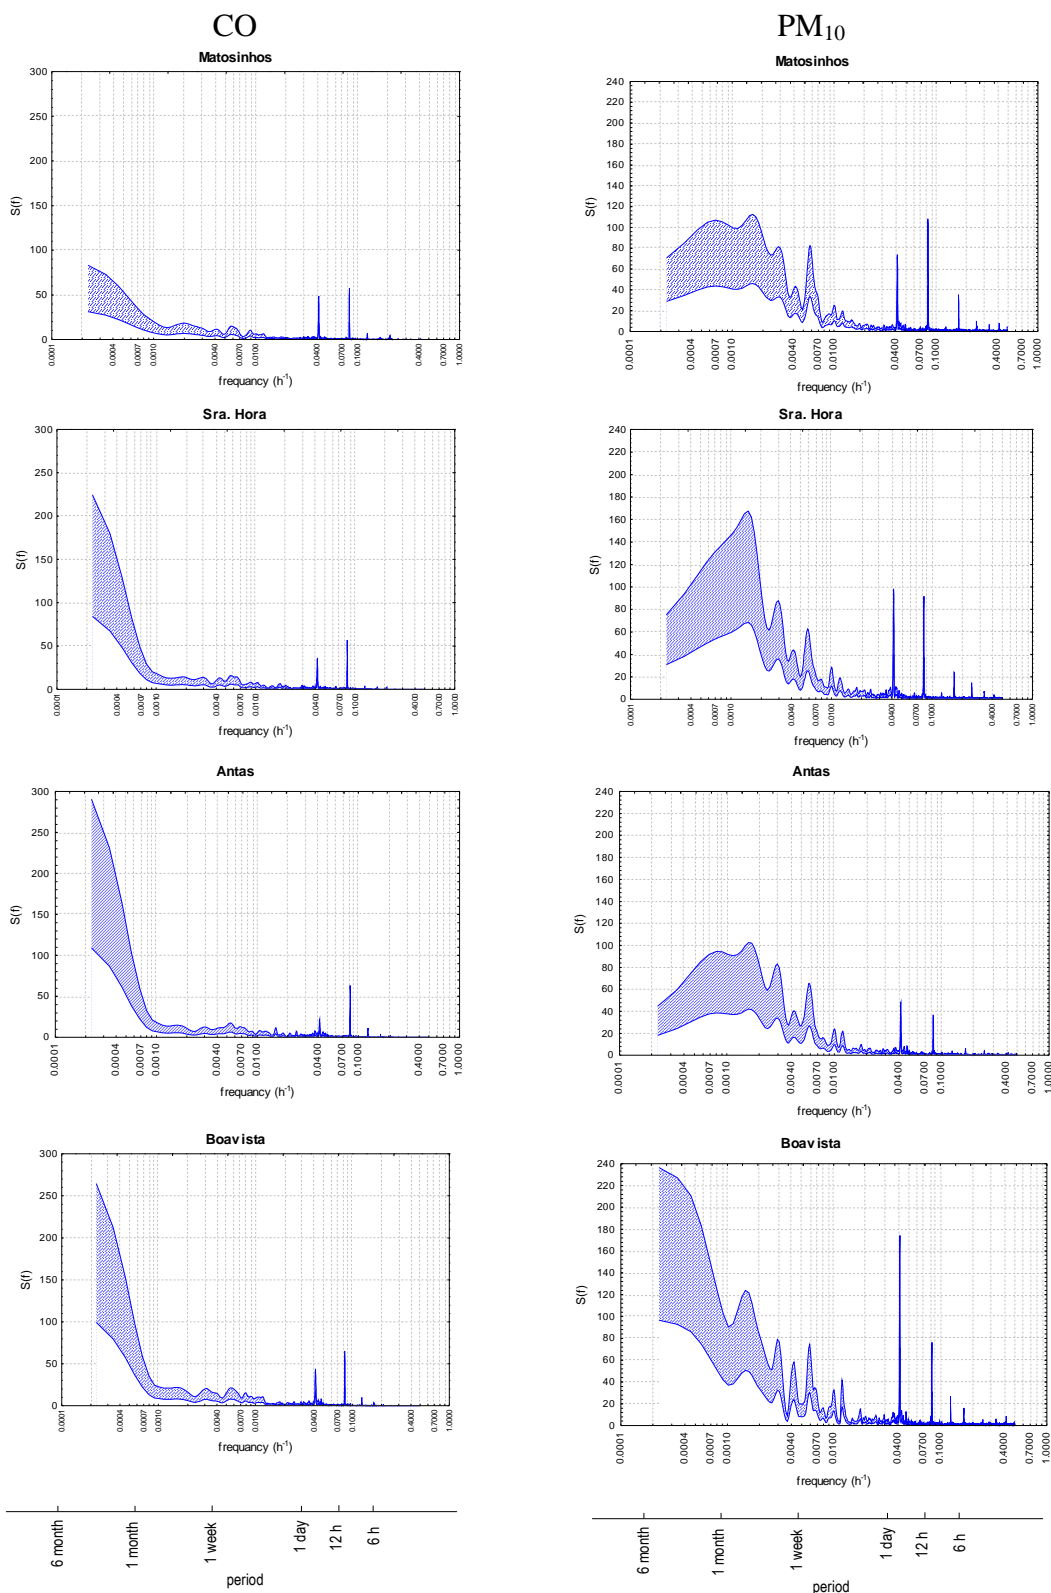

Figure 3. Power spectrum density of CO and PM₁₀ at urban traffic stations

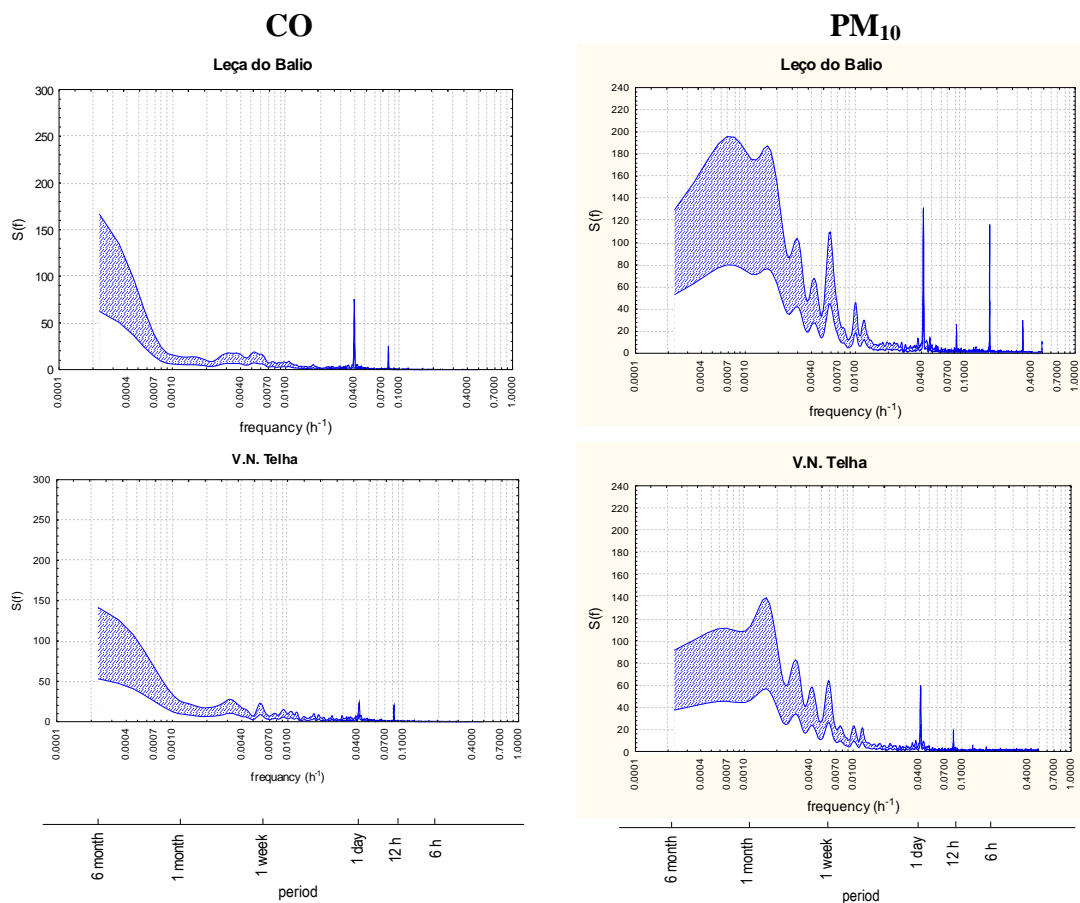

Figure 4. Power spectrum density of CO and PM₁₀ at suburban background stations

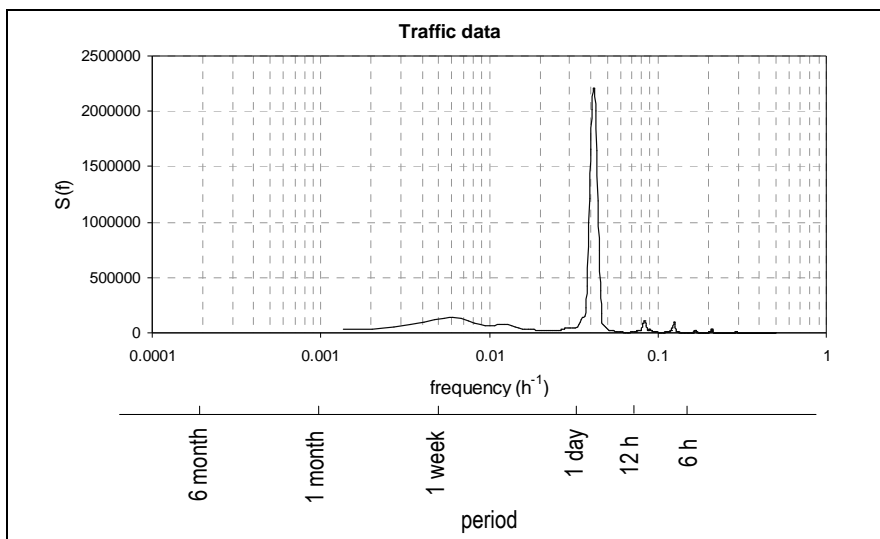

Figure 5. Power spectrum density of traffic counts

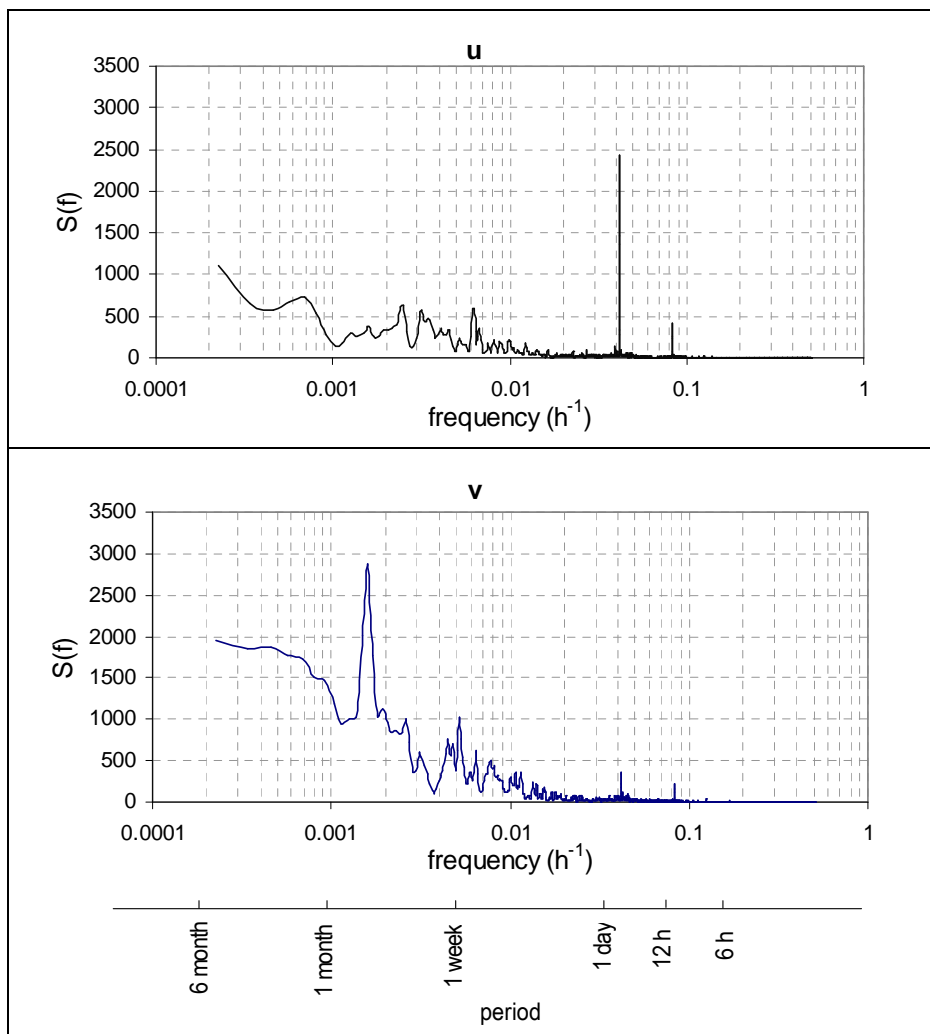

Figure 6. Power spectrum density of wind u and v components.

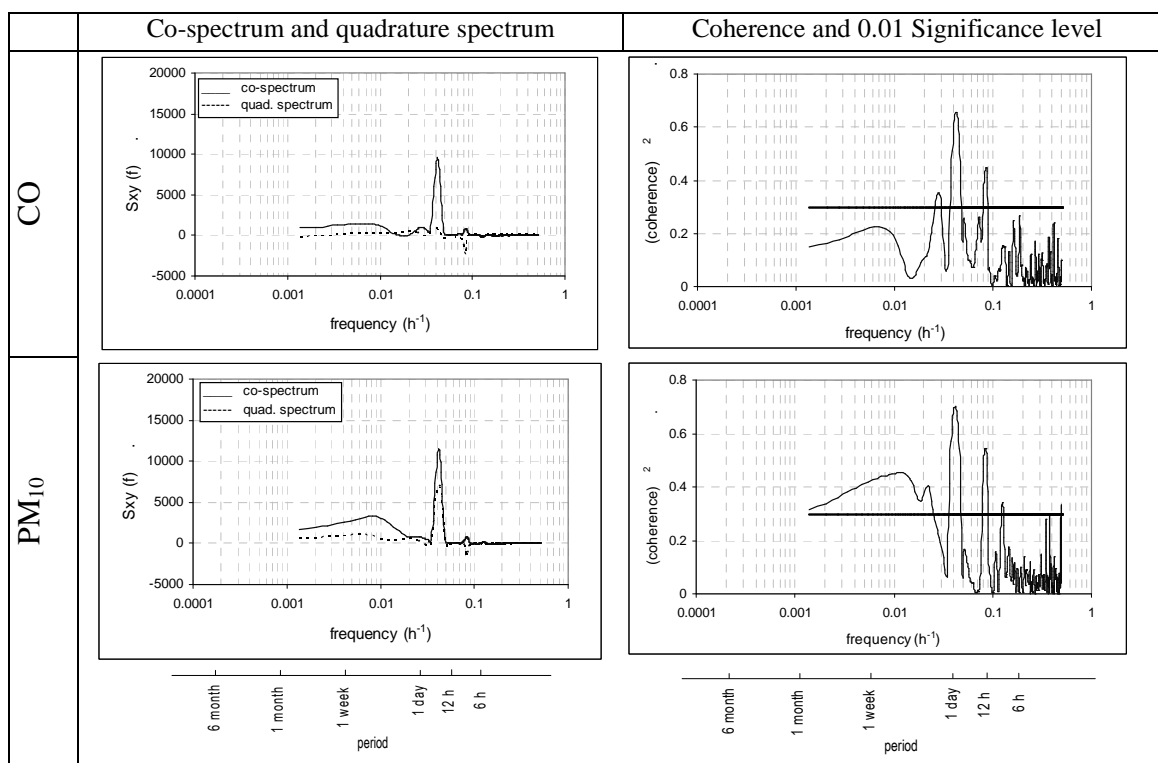

Figure 7. Co-spectrum, quadrature spectrum and coherency spectrum for pollutant concentrations versus traffic counts.

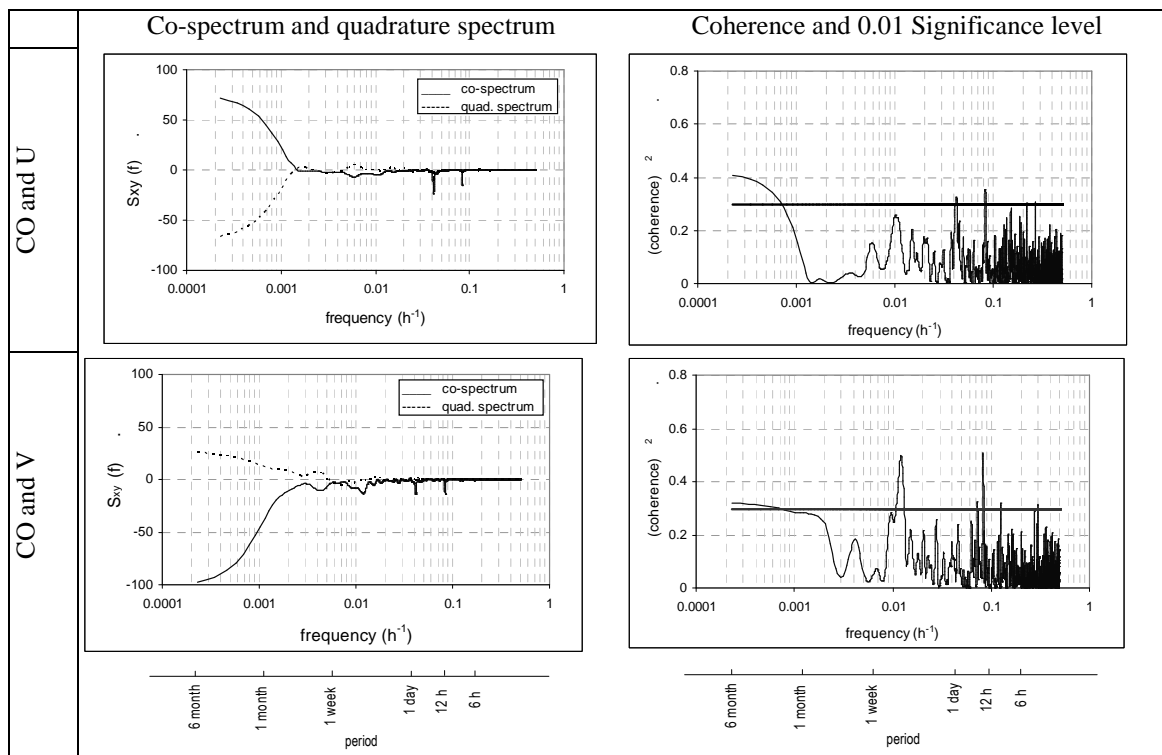

Figure 8. Co-spectrum, quadrature spectrum and coherency spectrum for CO concentrations versus wind components.

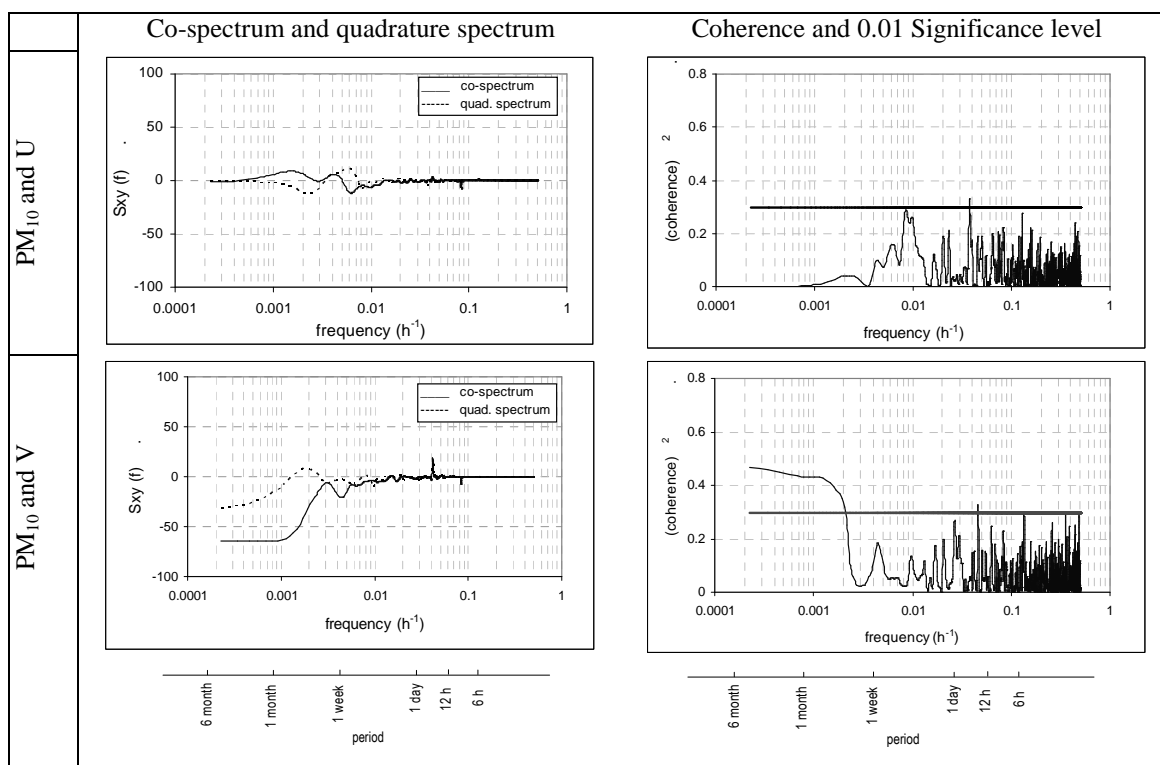

Figure 9. Co-spectrum, quadrature spectrum and coherency spectrum for PM_{10} concentrations versus wind components.

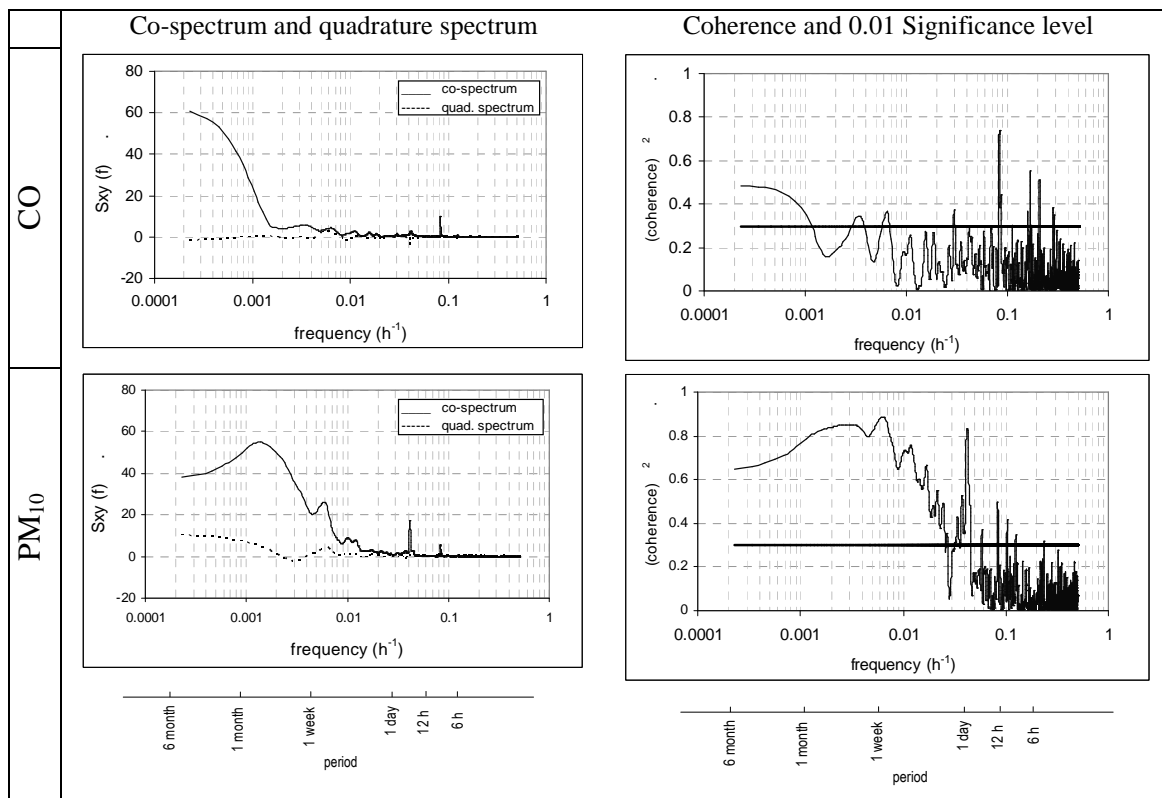

Figure 10. Co-spectrum, quadrature spectrum and coherency spectrum for CO and PM₁₀ concentrations: Antas urban station versus VNTelha suburban background station.
