<b>Preface</b>	<b>xi</b>
<b>Notation</b>	<b>xiii</b>
<b>1 FRP Composites for Strengthening RC Structures</b>	<b>1</b>
1.1 Introduction	1
1.2 Methods of Forming FRP Composites	2
1.3 Mechanical Properties of FRP Composites	3
1.4 Resins	5
1.5 Comparison of Performance for Strengthening of Structures	5
1.6 Partial Safety Factors	6
1.7 Concluding Remarks	7
References	8
<b>2 Bond Strength of FRP-to-concrete Joints</b>	<b>11</b>
2.1 Introduction	11
2.2 Test Methods, Behaviour and Failure Mode	13
2.3 Existing Bond Strength Models	14
2.3.1 Empirical Models	14
2.3.2 Fracture-mechanics-based Models	15
2.3.3 Design Proposals	18
2.3.4 Performance of Bond Strength Models	19
2.4 Chen and Teng's Model	20
2.5 Design Recommendation	26
2.6 Conclusions	26
References	27
<b>3 Flexural Strengthening of Beams</b>	<b>31</b>
3.1 Introduction	31
3.2 Methods of Strengthening	32
3.2.1 General	32

3.2.2	Unstressed Soffit Plates	33
3.2.3	End Anchorage for Unstressed Soffit Plates	33
3.2.4	Prestressed Soffit Plates	34
3.2.5	Additional Remarks	35
3.3	Failure Modes and Typical Behaviour	36
3.3.1	Classification of Failure Modes	36
3.3.2	Flexural Failure	36
3.3.3	Shear Failure	39
3.3.4	Plate-end Debonding Failures	39
3.3.5	Intermediate Crack-induced Interfacial Debonding	42
3.3.6	Other Debonding Failure Modes	44
3.3.7	Other Aspects of Debonding	44
3.3.8	U Strip End Anchorage	45
3.4	Flexural Strength	46
3.4.1	General	46
3.4.2	Design Equations	47
3.4.3	Presence of Preloading	51
3.5	Interfacial Stresses	53
3.5.1	General	53
3.5.2	Approximate Analytical Solutions	53
3.5.3	Finite-element Results	54
3.5.4	Higher Order Analytical Solutions	56
3.5.5	Remarks	56
3.6	Plate-end Debonding Strength Models	57
3.6.1	General	57
3.6.2	Review of Debonding Strength Models	58
3.6.3	Experimental Data	61
3.6.4	Performance of Debonding Strength Models	63
3.6.5	Smith and Teng's Model	71
3.7	Strength Model for Intermediate Crack-induced Interfacial Debonding	73
3.7.1	General	73
3.7.2	Intermediate Flexural Crack-induced Debonding	74
3.7.3	Intermediate Flexural Shear Crack-induced Debonding	77
3.8	Design Recommendation	78
3.8.1	Critical Sections and Plate-end Anchorage	78
3.8.2	Strength Check	79
3.8.3	Partial Safety Factors	80
3.8.4	Application of the Design Procedure to Indeterminate Beams	80
3.9	Conclusions	80
3.10	Appendix A	81
3.11	Appendix B	83

3.11.1	Shear-capacity-based Models	83
3.11.2	Concrete Tooth Models	86
3.11.3	Interfacial Stress-based Models	90
References		95
4	Shear Strengthening of Beams	103
4.1	Introduction	103
4.2	Methods of Strengthening	104
4.2.1	Strengthening Schemes	104
4.2.2	Selection of Strengthening Schemes	107
4.3	Failure Modes	109
4.3.1	General	109
4.3.2	Shear Failure with FRP Rupture	109
4.3.3	Shear Failure without FRP Rupture	110
4.3.4	Shear Failure due to FRP Debonding	110
4.3.5	Failures Near Mechanical Anchors	112
4.4	Existing Research on Shear Strength Models	112
4.5	Chen and Teng's Shear Strength Model	115
4.5.1	General Expressions	115
4.5.2	Shear Failure Controlled by FRP Rupture	117
4.5.3	Shear Failure Controlled by FRP Debonding	119
4.6	Design Recommendation	123
4.6.1	General Equations	123
4.6.2	Shear Failure Controlled by FRP Rupture	124
4.6.3	Shear Failure Controlled by FRP Debonding	124
4.6.4	Spacing Requirement for FRP Strips	126
4.6.5	Strengthening Design for Indeterminate Beams	127
4.7	Comparison with Experimental Observations	127
4.8	Conclusions	130
References		130
5	Flexural Strengthening of Slabs	135
5.1	Introduction	135
5.2	Methods of Strengthening	135
5.2.1	General	135
5.2.2	Simply Supported One-way or Two-way Slabs	136
5.2.3	Cantilever Slabs	138
5.3	Failure Modes and Typical Behaviour	140
5.3.1	Cantilever Slabs and One-way Slabs	140
5.3.2	Two-way Slabs	142
5.4	Design Recommendation for One-way Slabs	143
5.5	Design Recommendation for Two-way Slabs	143
5.5.1	Flexural Strength by the Moment Coefficient Method	143

5.5.2	Flexural Strength by Yield Line Analysis	144
5.5.3	Debonding Strengths	144
5.5.4	Anchorage of FRP Strips/Sheets	145
5.6	Conclusions	145
	References	145
<b>6</b>	<b>Strengthening of Axially and Eccentrically Loaded Columns</b>	<b>147</b>
6.1	Introduction	147
6.2	Methods of Strengthening	148
6.2.1	General	148
6.2.2	Wrapping	148
6.2.3	Filament Winding	149
6.2.4	Prefabricated Shell Jacketing	149
6.2.5	Comparison of Strengthening Methods	150
6.2.6	Constructional Aspects	150
6.2.7	Shape Modification	151
6.3	Failure Modes and Typical Behaviour of FRP-confined Concrete Columns	153
6.3.1	Circular Concrete Columns	153
6.3.2	Rectangular Concrete Columns	155
6.3.3	Elliptical Concrete Columns	156
6.4	Compressive Strength of FRP-confined Concrete	158
6.4.1	General	158
6.4.2	Review of Strength Models	159
6.4.3	Experimental Data	161
6.4.4	Trends of Experimental Data	162
6.4.5	Performance of Strength Models	164
6.4.6	Lam and Teng's Model	167
6.5	Stress–Strain Behaviour of FRP-confined Concrete	168
6.5.1	General	168
6.5.2	Review of Stress–Strain Models	169
6.5.3	Experimental Data	175
6.5.4	Trends of Experimental Data	176
6.5.5	Performance of Existing Stress–Strain Models	182
6.5.6	Lam and Teng's Stress–Strain Model	185
6.6	FRP-confined Rectangular Concrete Columns	190
6.6.1	General	190
6.6.2	Existing Models	190
6.6.3	Experimental Data	193
6.6.4	Lam and Teng's Model	195
6.7	FRP-confined Elliptical Columns	199
6.8	Design Recommendation for Axially Loaded Columns	200

6.8.1	General Expression for the Axial Strength of FRP-confined Concrete	200
6.8.2	Ultimate Strength of FRP-confined RC Columns under Axial Load	200
6.9	Design Recommendation for Eccentrically Loaded Columns	201
6.9.1	General	201
6.9.2	Existing Studies on FRP-confined RC Columns under Eccentric Loads	201
6.9.3	Ultimate Strength of FRP-confined RC Columns under Eccentric Loads	202
6.9.4	Moment–Curvature Analysis of FRP-confined RC Columns	204
6.9.5	Typical Interaction Curves	205
6.10	Conclusions	206
	References	208
7	Seismic Retrofit of Columns	213
7.1	Introduction	213
7.2	Typical Failure Modes of RC Columns under Seismic Attack	215
7.2.1	General	215
7.2.2	Shear Failure	215
7.2.3	Flexural Plastic Hinge Failure	216
7.2.4	Lap Splice Failure	216
7.2.5	Flexural Shear Failure of Columns with Longitudinal Reinforcement Cut-offs	217
7.2.6	Footing Failure	219
7.3	Methods of Retrofit	219
7.3.1	FRP Jackets with Horizontally Oriented Fibres	219
7.3.2	Longitudinal Bonding of FRP	220
7.4	Flexural Ductility of Retrofitted Columns	220
7.4.1	Ductility Factors	220
7.4.2	Ductility of Retrofitted RC Columns	222
7.5	Ultimate Conditions of Retrofitted Columns	225
7.5.1	General	225
7.5.2	Shear Failure	226
7.5.3	Flexural Plastic Hinge Failure	226
7.5.4	Lap Splice Failure	227
7.5.5	Flexural Failure of Columns with Longitudinal FRP	227
7.6	Design Recommendations	227
7.6.1	General	227
7.6.2	Shear Strength	228
7.6.3	Flexural Plastic Hinge Confinement	232

7.6.4	Lap Splice Clamping	233
7.6.5	Detailing Considerations	234
7.7	Conclusions	235
	References	236
