Preface	v
1 Basic Concepts in Banach Spaces	1
Hölder and Minkowski inequalities, classical spaces $C[0, 1]$, ℓ_p , c_0 , $L_p[0, 1]$,	2
Operators, quotient spaces, finite-dimensional spaces, Riesz's lemma, separability	10
Hilbert spaces, orthonormal bases, ℓ_2	16
Exercises	21
2 Hahn–Banach and Banach Open Mapping Theorems	37
Hahn–Banach extension and separation theorems	38
Duals of classical spaces	44
Banach open mapping theorem, closed graph theorem, dual operators	49
Exercises	52
3 Weak Topologies	63
Weak and weak star topology, Banach–Steinhaus uniform boundedness principle, Alaoglu's and Goldstine's theorem, reflexivity	64
Extreme points, Krein–Milman theorem, James boundary, Ekeland's variational principle, Bishop–Phelps theorem .	76
Exercises	86

4 Locally Convex Spaces	107
Local bases, bounded sets, metrizability and normability, finite-dimensional spaces, distributions	108
Bipolar theorem, Mackey topology	116
Carathéodory and Choquet representation; Banach–Dieudonné, Eberlein–Šmulian, Kaplansky theorems, and Banach–Stone theorem	121
Exercises	130
5 Structure of Banach Spaces	137
Projections and complementability, Auerbach bases	137
Separable spaces as subspaces of $C[0, 1]$ and quotients of ℓ_1 , Sobczyk’s theorem, Schur’s property of ℓ_1	140
Exercises	147
6 Schauder Bases	161
Shrinking and boundedly complete bases, reflexivity, Mazur’s basic sequence theorem, small perturbation lemma	165
Block basis sequences, Pełczyński’s decomposition method and subspaces of ℓ_p , Pitt’s theorem, Khintchine’s inequality and subspaces of L_p	172
Unconditional bases, James’s theorem on containment of ℓ_1 and c_0 , James’s space J , Bessaga–Pełczyński theorem	180
Markushevich bases in separable spaces, their extension property, Johnson’s and Plichko’s result on ℓ_∞	188
Exercises	191
7 Compact Operators on Banach Spaces	203
Compact and finite-rank operators, Fredholm operators, Fredholm alternative	203
Eigenvalues, eigenspaces, spectrum, spectral decomposition	210
Spectral theory of compact self-adjoint and compact normal operators	216
Banach’s contraction principle, nonexpansive mappings, Ryll– Nardzewski theorem, Brouwer’s and Schauder’s theorems, invariant subspaces	227
Exercises	231
8 Differentiability of Norms	241
Šmulian’s dual test, Kadec’s Fréchet-smooth renorming of spaces with separable dual, Fréchet differentiability of convex functions	243
More on extremal structure, Lindenstrauss’s result on strongly exposed points and norm-attaining operators	255
Exercises	263

9 Uniform Convexity	285
Uniform convexity and uniform smoothness, ℓ_p spaces	285
Finite representability, local reflexivity, superreflexive spaces and Enflo's renorming, Kadec's and Gurarii-Gurarii-James theorems	291
Exercises	305
10 Smoothness and Structure	313
Smooth and compact variational principles, subdifferential, Stegall's variational principle	314
Partitions of unity, smooth approximation	328
Lipschitz homeomorphisms, Aharoni's embeddings into c_0 , Heinrich-Mankiewicz results on linearization of Lipschitz maps	331
Homeomorphisms, Mazur's theorem on ℓ_p , Kadec's theorem . .	336
Smoothness in ℓ_p and Hilbert spaces	340
Countable James boundary and saturation by c_0	343
Exercises	346
11 Weakly Compactly Generated Spaces	357
Projectional resolutions, injections into $c_0(\Gamma)$, Eberlein compacts, embedding into a reflexive space, locally uniformly rotund and smooth renormings	358
Weakly compact operators, Davis-Figiel-Johnson-Pelczyński factorization, absolutely summing operators, Pietsch factorization, Dunford-Pettis property	370
Quasicomplements	377
Exercises	379
12 Topics in Weak Topology	387
Eberlein compacts, metrizable subspaces	388
Uniform Eberlein compacts, scattered compacts	394
Weakly Lindelöf spaces, property C	402
Corson compacts, weak pseudocompactness in Banach spaces, (B_X, w) Polish	409
Exercises	417
References	431
Index	445
