

FUNDAMENTALS OF INTERFACE AND COLLOID SCIENCE

Volume 1
FUNDAMENTALS

J. Lyklema

With special contributions by
H.P. van Leeuwen (Chapter 6)
T. van Vliet (Chapter 6)
A.-M. Cazabat (Chapter 7)

ACADEMIC PRESS
London San Diego New York Boston
Sydney Tokyo Toronto

CONTENTS

LIST OF SYMBOLS

1 INTRODUCTION TO INTERFACIAL AND COLLOID CHEMISTRY

1.1	First encounter	1.1
1.2	A first review of interface and colloid science	1.3
1.3	Further insights	1.8
1.4	Guiding principles	1.28
1.5	Structure of this book	1.30

2 THERMODYNAMIC FOUNDATIONS OF INTERFACE AND COLLOID SCIENCE

2.1	Thermodynamic principles	2.1
2.2	Thermodynamic definitions	2.2
2.3	Equilibrium, reversibility and relaxation	2.4
2.4	The First Law	2.8
2.5	The excess character of interfacial energy. The Gibbs dividing plane	2.11
2.6	Enthalpy and interfacial enthalpy	2.15
2.7	Heat capacities of bulk phases and interfaces	2.17
2.8	The Second Law	2.20
2.9	Entropies of bulk phases and interfaces	2.23
2.10	Gibbs and Helmholtz energies of bulk phases and interfaces	2.24
2.11	Differential and integral characteristic functions of bulk phases and interfaces.	2.28
2.12	Thermodynamic conditions for equilibrium	2.30
2.13	Gibbs-Duhem relations, the Gibbs adsorption equation and the Phase Rule	2.35
2.14	Relations of general validity. Properties of total differentials	2.37
	a. Euler's theorem	2.37
	b. Change of variables. Partial differential quotients	2.38
	c. Cross-differentiation	2.39
2.15	Gibbs-Helmholtz relations	2.42
2.16	Homogeneous mixtures. General features	2.44
2.17	Ideal homogeneous mixtures	2.50
	a. Ideal gas mixtures	2.51
	b. Ideal liquid mixtures	2.55
	c. Ideally dilute solutions	2.57
2.18	Non-ideal mixtures and solutions	2.58
	a. Introduction of activity and osmotic coefficients	2.59
	b. The use of excess functions	2.60
	c. Regular Solution theory	2.61
	d. Virial expansions	2.63
2.19	Phase separation and demixing	2.64
2.20	The laws of dilute solutions	2.68
	a. Distribution between two phases (Nernst)	2.68
	b. The solubility of a gas (Henry)	2.70
	c. Solubility of solids and liquids	2.70
	d. Osmotic pressure (Van 't Hoff)	2.71
	e. Adsorption from solution	2.73
	f. Colligative properties	2.74
2.21	Chemical equilibrium	2.75

2.22	Further discussion of the Gibbs adsorption equation	2.78
	a. Locating the Gibbs dividing plane on the basis of interfacial excesses of material	2.79
	b. Relative interfacial excesses and the Gibbs adsorption equation	2.83
	c. Application to special cases	2.84
2.23	Curved interfaces. Introduction to capillarity and nucleation	2.86
	a. Mathematical description of curvature	2.86
	b. Derivation of the law of Young and Laplace	2.90
	c. Dependence of chemical potential on curvature	2.95
	d. The classical approach to homogeneous nucleation	2.97
2.24	Thermodynamics of solid interfaces	2.100
2.25	Concluding remarks	2.102
2.26	General references	2.103

3 STATISTICAL THERMODYNAMIC FOUNDATIONS OF INTERFACE AND COLLOID SCIENCE

3.1	Basic principles and definitions	3.1
	a. Introduction. Averages and distributions	3.1
	b. Probabilities	3.4
	c. Ensembles	3.5
	d. The two Postulates	3.6
	e. Monte Carlo simulations and molecular dynamics	3.7
	f. A typical example: the ideal monatomic gas	3.9
3.2	Partition Functions	3.9
	a. Definition. The microcanonical partition function	3.10
	b. The canonical partition function	3.10
	c. The grand canonical and other partition functions	3.12
	d. Finding probabilities from partition functions	3.13
3.3	Statistical and classical thermodynamic equivalence. Characteristic functions	3.15
3.4	Derivation of macroscopic quantities from partition functions	3.18
3.5	Partition functions of subsystems	3.19
	a. Atom, vibrating around an equilibrium position	3.21
	b. Adsorbed, localized atom	3.22
	c. Translating atom	3.23
	d. Mobile adsorbed atom	3.24
	e. Rotating symmetrical diatomic molecule	3.24
	f. Subsystems consisting of several atoms. Statistical chain elements	3.25
3.6	Partition functions for systems with independent subsystems	3.26
	a. Einstein crystal	3.26
	b. Monatomic ideal gases	3.26
	c. Polyatomic ideal gases	3.28
	d. Introduction to lattice statistics. The Langmuir adsorbate	3.29
	e. Extension of the lattice statistics	3.32
3.7	Fluctuations	3.33
	a. Standard deviations	3.34
	b. Probability distributions	3.38
3.8	Dependent subsystems	3.39
	a. One-dimensional adsorption with nearest-neighbour interaction	3.40
	b. A note on pair interaction energies in lattice statistics	3.43
	c. Binary systems with nearest-neighbour interactions	3.44
	d. The Bragg-Williams approximation	3.46
	e. The quasi-chemical approximation	3.51
	f. Virial expansions	3.54

3.9	Classical statistical thermodynamics	3.56
	a. Principles. Configuration integrals	3.57
	b. The second virial coefficient	3.59
	c. More general virial treatment	3.62
	d. The radial distribution function	3.65
	e. Higher-order distribution functions	3.70
3.10	Concluding remarks	3.72
3.11	General references	3.72
	a. Books on statistical thermodynamics/mechanics	3.72
	b. More specialized books and reviews	3.73
4 INTERACTIONS IN INTERFACE AND COLLOID SCIENCE		
4.1	Types of interactions	4.1
4.2	Pair interaction curves. The disjoining pressure	4.3
4.3	Force fields and potentials	4.10
	a. Forces as vectors	4.10
	b. The potential	4.12
	c. The potential of mean force and the mean potential	4.13
4.4	Van der Waals forces between isolated molecules	4.16
	a. Qualitative discussion	4.17
	b. Polar molecules and polarization phenomena	4.19
	c. Keesom- and Debye-Van der Waals forces	4.26
	d. London-Van der Waals forces	4.28
	e. Generalizations. Resonance and relaxation phenomena	4.32
4.5	Molecular forces in a medium	4.41
	a. Some general considerations	4.41
	b. Repulsive forces. The Lennard-Jones pair interaction	4.42
	c. Self Gibbs energies of molecules in a medium. Cohesion	4.44
	d. Hydrogen bonding	4.48
	e. Hydrophobic interaction	4.49
	f. Dielectric response of condensed media	4.51
4.6	Van der Waals forces between macrobodies. The Hamaker-De Boer approximation	4.57
	a. Interactions in a vacuum	4.58
	b. Interactions in a medium	4.69
	c. Retardation	4.73
4.7	Van der Waals forces between macrobodies. The Lifshits theory	4.75
4.8	Measuring Van der Waals interactions between macrobodies	4.82
4.9	References	4.84
	a. Background texts on polarization, molecular interaction and dielectric phenomena	4.84
	b. Van der Waals forces, especially between macrobodies	4.85
5 ELECTROCHEMISTRY AND ITS APPLICATION TO COLLOIDS AND INTERFACES		
5 Electrochemistry and its application to colloids and interfaces		
5.1	Some basic issues	5.2
	a. Free and bound ions. Electroneutrality	5.2
	b. Chemical potentials of ions and electrolytes	5.4
	c. The electrochemical potential	5.7
	d. A brief review of basic electrostatic quantities	5.9
5.2	Ionic interactions in electrolyte solution	5.15
	a. Debye-Hückel theory	5.15
	b. Appraisal of the Debye-Hückel theory	5.23
	c. Extensions and alternatives of the Debye-Hückel theory	5.26
	d. Ion association	5.30

5.3	Ion-solvent interactions	5.33
	a. The thermodynamics of ion solvation	5.34
	b. Primitive theory of ion solvation	5.38
	c. The solvent water	5.40
	d. Ion hydration	5.46
	e. Dielectric permittivity around hydrated ions	5.59
	f. Solvation in non-aqueous and mixed media	5.62
5.4	Solvent structure-originated interactions	5.66
5.5	Interfacial potentials	5.71
	a. Types of interfacial potentials	5.71
	b. Polarized and relaxed interfaces	5.76
	c. Nernst's law for Galvani potential differences	5.79
	d. Liquid junction or diffusion potentials	5.80
	e. Galvanic cells	5.82
	f. The suspension effect	5.86
5.6	Surface charge	5.89
	a. The notion of surface charge for relaxed interfaces	5.89
	b. The Gibbs equation for relaxed interfaces. Ionic components of charge	5.91
	c. The Gibbs equation for polarized interfaces	5.94
	d. The Esin-Markov coefficient	5.97
	e. Experimental determination of the surface charge	5.99
5.7	The Gibbs energy of an electrical double layer	5.103
5.8	General references	5.109
	a. IUPAC recommendations	5.109
	b. Literature on electrolyte solutions	5.110
	c. Literature compilations on activities, activity and osmotic coefficients, etc.	5.112
	d. Literature on double layer thermodynamics	5.114
6 TRANSPORT PHENOMENA IN INTERFACE AND COLLOID SCIENCE		
6.1	Transport fundamentals	6.3
	a. Conservation of mass	6.3
	b. Conservation of momentum. Equation of motion	6.5
	c. Empirical linear transport laws	6.10
6.2	Elements of irreversible thermodynamics	6.12
	a. Entropy production and local equilibrium	6.12
	b. The Onsager relations	6.14
	c. Application to electrokinetic phenomena	6.15
6.3	Stochastic processes	6.17
	a. Brownian motion	6.18
	b. The transition between stochastic and directional processes	6.20
	c. The Fokker-Planck equation	6.23
	d. Introduction to lattice walk statistics	6.27
6.4	Viscous flow phenomena	6.31
	a. Laminar linear flow	6.31
	b. The onset of turbulence. Vortices	6.34
	c. Flow caused by temperature gradients	6.37
	d. Flow along and in interfaces	6.39
	e. Flow around a spherical obstacle	6.45
	f. Introduction to the flow through porous media	6.48
	g. Some examples of viscosities	6.51

6.5	Diffusion	6.53
	a. Irreversible thermodynamic basis	6.54
	b. Kinetic interpretation	6.55
	c. Examples of diffusion coefficients	6.57
	d. Diffusion to or from a flat surface	6.59
	e. Diffusion-controlled adsorption onto a plane	6.65
	f. Diffusion in non-linear geometry	6.67
	g. Some other types of diffusion	6.68
6.6	Conduction	6.73
	a. Basic principles	6.74
	b. Effects of ionic interaction	6.78
	c. Conduction under extreme conditions: the Wien and Debye-Falkenhagen effects	6.84
	d. Surface conduction	6.85
6.7	Mixed transport modes	6.88
	a. The Nernst-Planck equation	6.89
	b. Liquid junction potentials	6.89
	c. Convective diffusion	6.91
6.8	General References	6.94
	a. IUPAC recommendations	6.94
	b. Hydrodynamics, rheology, diffusion	6.94
	c. Irreversible thermodynamics	6.96
	d. Stochastic processes. Brownian motion	6.96
	e. Transport in electrolyte solutions. Conduction	6.97

7 OPTICS AND ITS APPLICATION TO INTERFACE AND COLLOID SCIENCE

7.1	Electromagnetic waves in a vacuum	7.2
	a. Plane, linearly polarized, monochromatic waves	7.3
	b. Other geometries and modes of polarization	7.5
	c. On the detection of electromagnetic waves	7.8
7.2	Introduction of the Maxwell equations and medium effects	7.9
	a. Waves in a vacuum.	7.10
	b. Waves in non-adsorbing, homogeneous media	7.11
	c. Waves in absorbing isotropic media	7.12
7.3	Interaction of radiation with matter	7.13
	a. Fundamental phenomena	7.14
	b. Introduction to the mathematical treatment. Oscillators	7.16
7.4	Sources of electromagnetic waves	7.20
	a. Resonators and electronic circuits	7.20
	b. Classical molecular sources	7.20
	c. Lasers and masers	7.23
7.5	Particle-wave duality	7.23
7.6	Quasi-elastic light scattering (QELS) techniques	7.25
	a. Arrangements for scattering experiments	7.27
	b. Instantaneous scattered field	7.29
	c. Dynamic analysis	7.33
	d. An interim report	7.38
7.7	Quasi-elastic scattering of liquids	7.42
	a. Monatomic liquids	7.42
	b. Molecular liquids	7.45
	c. Scattering near the critical point	7.46

7.8	Quasi-elastic scattering by colloids	7.47
	a. Binary mixtures of monatomic liquids	7.48
	b. Solutions of small isotropic colloids	7.50
	c. Dilute sols of small identical anisotropic, and anisodimensional particles	7.53
	d. Dilute sols of large particles	7.54
	e. Dilute heterodisperse sols	7.62
	f. Concentrated sols	7.63
	g. Light scattering: conclusions and summary	7.66
7.9	Neutron and X-ray scattering by colloids	7.67
	a. X-ray scattering	7.68
	b. Neutron scattering	7.69
7.10	Optics of interfaces	7.71
	a. Reflection, refraction and transmission	7.71
	b. Reflectometry and ellipsometry	7.76
	c. Light scattering by interfaces	7.81
7.11	Surface spectroscopy and imaging techniques	7.84
	a. Surface spectroscopy	7.85
	b. Imaging techniques	7.89
7.12	Infrared and Raman spectroscopy	7.91
7.13	Magnetic resonance techniques	7.94
7.14	Anisotropic media and polarization phenomena	7.96
7.15	Measuring diffusion coefficients: a review	7.101
7.16	General references	7.104
	a. IUPAC recommendations	7.104
	b. General optics, waves, radiation, NMR, ESR	7.105
	c. Scattering	7.105
	d. Surface spectroscopy, STM	7.106
APPENDIX 1 Fundamental constants		A1.1
APPENDIX 2 Common SI prefixes		A2.1
APPENDIX 3 Integral characteristic functions for homogeneous bulk phases and for two phases, separated by a flat interface		A3.1
APPENDIX 4 Differentials of characteristic functions for homogeneous bulk phases and for two phases, separated by a flat interface		A4.1
APPENDIX 5 Integral characteristic functions for flat interfaces and their differentials		A5.1
APPENDIX 6 Derivation of macroscopic quantities from partition functions		A6.1
APPENDIX 7 Vectors and vector fields. Introduction to tensors		A7.1
	a. Representation of vectors. Generalities	A7.2
	b. Manipulations with vectors	A7.2
	c. Vector fields and vector operations	A7.5
	d. Other coordinate systems	A7.8
	e. Vector theorems	A7.11
	f. Introduction to tensors	A7.12
APPENDIX 8 Complex and imaginary quantities		A8.1

APPENDIX 9 Hamaker constants	A9.1
APPENDIX 10 Laplace and Fourier transformations	A10.1
a. Laplace transformations	A10.1
b. Fourier series and Fourier transformations	A10.5
c. Spatial Fourier transforms	A10.7
APPENDIX 11 Time correlation functions	A11.1
a. Velocity correlation functions	A11.1
b. Density correlation functions. Absence of interaction	A11.5
c. Interacting colloidal particles	A11.8
