FOREWORD	v
PREFACE	xi
NOTATION	xiii
1. ROCK AS A MATERIAL	page 1
1.1 Introduction. 1.2 Joints and faults. 1.3 Rock-forming minerals. 1.4 The fabric of rocks. 1.5 The mechanical nature of rock.	
2. ANALYSIS OF STRESS AND INFINITESIMAL STRAIN	9
2.1 Introduction. 2.2 Definition of stress. 2.3 Stress in two dimensions. 2.4 Stress in three dimensions. 2.5 Stress calculations in three dimensions. 2.6 Mohr's representation of stress in three dimensions. 2.7 The use of the stereographic projection. 2.8 Stress deviation. 2.9 Displacement and strain. 2.10 Infinitesimal strain in two dimensions. 2.11 Infinitesimal strain in three dimensions. 2.12 Strain deviation. 2.13 Determination of principal stresses or strains from measurements. 2.14 Matrices and change of axes. 2.15 Stress and strain in polar and cylindrical coordinates.	
3. FRICTION	53
3.1 Introduction. 3.2 Amonton's law. 3.3 Friction of rocks. 3.4 Phenomena with smooth surfaces. 3.5 Stick-slip oscillations. 3.6 Sliding on a plane of weakness: Two-dimensional theory. 3.7 The study of friction in triaxial apparatus. 3.8 Sliding on a plane of weakness: Three-dimensional theory.	
4. ELASTICITY AND STRENGTH OF ROCK	74
4.1 Introduction. 4.2 The stress-strain curve. 4.3 The effects of confining pressure and temperature. 4.4 Failure under polyaxial stresses. 4.5 Types of fracture. 4.6 The Coulomb criterion. 4.7 Mohr's hypothesis. 4.8 The plane Griffith criterion. 4.9 Murrell's extension of the Griffith criterion. 4.10 The effect of anisotropy on strength.	
5. LINEAR ELASTICITY	102
5.1 Introduction. 5.2 The stress-strain relations for an isotropic, linearly elastic solid. 5.3 Special cases. 5.4 Stress-strain relations in terms of stress and strain deviations. 5.5 The equations of equilibrium. 5.6 The equations of equilibrium in cylindrical coordinates. 5.7 Compatibility conditions for stress and the Airy stress function. 5.8 Strain energy. 5.9 Torsion of circular cylinders. 5.10 Bending and buckling. 5.11 Hollow cylinders with internal or external pressure. 5.12 Stress-strain relations for anisotropic materials.	

6. LABORATORY TESTING	page 136
6.1 Introduction. 6.2 Uniaxial compression. 6.3 Uniaxial tension. 6.4 Tri-axial compression. 6.5 Extension in the triaxial test. 6.6 Results of triaxial tests. 6.7 Tests with homogeneous polyaxial stress. 6.8 Hollow cylinders. 6.9 Torsion. 6.10 Bending. 6.11 Diametral compression of cylinders. 6.12 Other tests. 6.13 Stiff testing machines. 6.14 Dynamic methods. 6.15 Comparison of results.	
7. EFFECTS OF SIZE AND STRESS GRADIENT	183
7.1 Introduction. 7.2 The influence of size on strength. 7.3 The influence of stress gradient on strength. 7.4 Weibull's discussion of tensile strength. 7.5 Bending. 7.6 Hollow cylinders. 7.7 Biaxial stresses and torsion.	
8. FLUID PRESSURE AND FLOW IN ROCKS	195
8.1 Introduction. 8.2 Porosity and permeability. 8.3 Flow of fluid through a porous medium. 8.4 The macroscopic stress-strain relations. 8.5 The equations of equilibrium, flow, and consolidation. 8.6 Consolidation and water movement in one dimension. 8.7 Simplified equations of consolidation. 8.8 Effective stress. 8.9 The effect of pore-pressure on the strength of rocks. 8.10 Hydraulic fracturing.	
9. BEHAVIOUR OF DUCTILE MATERIALS	215
9.1 Introduction. 9.2 Yield criteria. 9.3 The equations of plasticity. 9.4 Elastic-plastic solutions in cylindrical coordinates. 9.5 Flow between flat surfaces.	
10. FURTHER PROBLEMS IN ELASTICITY	228
10.1 Introduction. 10.2 Complex variable theory in two dimensions. 10.3 Simple special cases. 10.4 The region outside a circular hole of radius R with given principal stresses at infinity. 10.5 Solutions in the form of infinite series. 10.6 Stress applied to the surface of a circular hole. 10.7 Stress applied to the surface of a solid cylinder. 10.8 The circular ring stressed over parts of its outer or inner surfaces. 10.9 Inclusions in an infinite region. 10.10 Curvilinear coordinates. 10.11 The infinite region with an elliptic hole. 10.12 Stresses near the tip of a crack. 10.13 Griffith theory in two dimensions. 10.14 The effect of friction between crack surfaces. 10.15 The nearly rectangular hole and openings of other shapes. 10.16 Surface loads on a semi-infinite region: two-dimensional theory. 10.17 Surface loads on a semi-infinite region: three-dimensional theory. 10.18 Anisotropic materials. 10.19 Photoelasticity. 10.20 Finite element methods.	
11. TIME-DEPENDENT EFFECTS	292
11.1 Introduction. 11.2 Empirical laws of creep. 11.3 Simple rheological models. 11.4 Behaviour of more complicated systems.	
12. CRACK PHENOMENA AND THE MECHANISM OF FRACTURE	310
12.1 Introduction. 12.2 The strain energy associated with a crack. 12.3 The effect of cracks on elastic properties. 12.4 Energy theories of failure. 12.5 Elementary theory of crack propagation. 12.6 The dynamics of crack propagation. 12.7 Disruption of rock by crack propagation.	

13. STRAIN WAVES	page 335
13.1 Introduction. 13.2 Elastic waves. 13.3 Energy, particle velocity, and stress. 13.4 Reflection and refraction at an interface. 13.5 Seismic location of failures. 13.6 Seismic measurements. 13.7 Inelastic waves.	
14. THE STATE OF STRESS UNDERGROUND	355
14.1 Introduction. 14.2 Stresses due to gravity. 14.3 Results of stress measurements. 14.4 Tectonic, residual, and structural stresses.	
15. UNDERGROUND MEASUREMENTS	363
15.1 Introduction. 15.2 Flat-jack measurements. 15.3 Stressing of the interior of a borehole. 15.4 Borehole deformation. 15.5 Measurements at the end of a borehole. 15.6 Inclusion stressmeters. 15.7 Plate-bearing tests. 15.8 Large-scale compression and shear tests. 15.9 Measuring bolts. 15.10 Gross displacements in the rock mass from precise levelling. 15.11 Longitudinal displacements in long boreholes.	
16. GRANULAR MATERIALS	384
16.1 Introduction. 16.2 The stress-strain curve for weathered rock and aggregate. 16.3 Triaxial tests on soil and aggregate. 16.4 Finely cracked rock. 16.5 The Coulomb material: theoretical solutions.	
17. GEOLOGICAL APPLICATIONS	400
17.1 Introduction. 17.2 Faulting. 17.3 Geological stress systems. 17.4 Overthrust faulting and sliding under gravity. 17.5 Mechanics of intrusion. 17.6 Finite strain. 17.7 Finite homogeneous strain in two dimensions. 17.8 Finite homogeneous strain in three dimensions.	
18. MINING AND OTHER ENGINEERING APPLICATIONS	435
18.1 Introduction. 18.2 Criteria for the design and support of underground excavations. 18.3 The energy released by making an underground excavation. 18.4 Tabular excavations. 18.5 An analogue for determining displacements and stresses around tabular excavations. 18.6 Pillars and ribs. 18.7 Support. 18.8 Multiple excavations. 18.9 Delineation of regions of failure. 18.10 Determination of rock quality for engineering purposes. 18.11 Rock-slope stability. 18.12 Vibration damage due to blasting.
