Contents

	Preface	xiii
1	**Introduction**	1
1.1	Gauge invariance	1
1.2	Reasons for gauge theories of strong and electroweak interactions	3
	QCD	3
	Electroweak theory	5
1.3	Non-abelian gauge field lagrangian	9
	$U(1)$ gauge symmetry	9
	Non-abelian gauge symmetry	12
	Problems	15
2	**Path integral formulation of quantum field theory**	17
2.1	Path integrals in quantum mechanics	17
	Transition matrix elements as path integrals	17
	Matrix elements of position operators	20
2.2	Vacuum-to-vacuum transitions and the imaginary time formalism	22
	General discussion	22
	Harmonic oscillator	24
	Euclidean Green's functions	27
2.3	Path integral formulation of quantum field theory	28
	Green's functions as path integrals	28
	Action quadratic in fields	32
	Gaussian integration	33
2.4	Introduction to perturbation theory	35
	Perturbation theory and the generating functional	35
	Wick's theorem	37
	An example: four-point Green's function in $\lambda\Phi^4$	38
	Momentum space	41
2.5	Path integrals for fermions; Grassmann algebra	44
	Anticommuting c-numbers	44
	Fermion propagator	46
2.6	Generating functionals for Green's functions and proper vertices; effective potential	48

	Classification of Green's functions and generating functionals	48
	Effective action	50
	Spontaneous symmetry breaking and effective action	52
	Effective potential	54
2.7	Green's functions and the scattering operator	55
	Problems	61
3	**Feynman rules for Yang–Mills theories**	64
3.1	Faddeev–Popov determinant	64
	Gauge invariance and the path integral	64
	Faddeev–Popov determinant	66
	Examples	69
	Non-covariant gauges	71
3.2	Feynman rules for QCD	73
	Calculation of the Faddeev–Popov determinant	73
	Feynman rules	74
3.3	Unitarity, ghosts, Becchi–Rouet–Stora transformation	78
	Unitarity and ghosts	78
	BRS and anti-BRS symmetry	81
	Problems	85
4	**Introduction to the theory of renormalization**	86
4.1	Physical sense of renormalization and its arbitrariness	86
	Bare and 'physical' quantities	86
	Counterterms and the renormalization conditions	89
	Arbitrariness of renormalization	90
	Final remarks	93
4.2	Classification of the divergent diagrams	94
	Structure of the UV divergences by momentum power counting	94
	Classification of divergent diagrams	95
	Necessary counterterms	98
4.3	$\lambda\Phi^4$: low order renormalization	100
	Feynman rules including counterterms	100
	Calculation of Fig. 4.8(*b*)	102
	Comments on analytic continuation to $n \neq 4$ dimensions	104
	Lowest order renormalization	105
5	**Quantum electrodynamics**	109
5.1	Ward–Takahashi identities	111
	General derivation by the functional technique	111
	Examples	112
5.2	Lowest order QED radiative corrections by the dimensional regularization technique	115
	General introduction	115
	Vacuum polarization	116
	Electron self-energy correction	118
	Electron self-energy: IR singularities regularized by photon mass	120
	On-shell vertex correction	121
5.3	Massless QED	124

5.4	Dispersion calculation of $O(\alpha)$ virtual corrections in massless QED, in $(4 \mp \varepsilon)$ dimensions	126
	Self-energy calculation	126
	Vertex calculation	128
5.5	Coulomb scattering and the IR problem	129
	Corrections of order α	129
	IR problem to all orders in α	134
	Problems	136
6	**Renormalization group**	138
6.1	Renormalization group equation (RGE)	138
	Derivation of the RGE	138
	Solving the RGE	141
	Green's functions for rescaled momenta	143
	RGE in QED	144
6.2	Calculation of the renormalization group functions β, γ, γ_m	145
6.3	Fixed points; effective coupling constant	147
	Fixed points	147
	Effective coupling constant	150
6.4	Renormalization scheme and gauge dependence of the RGE parameters	152
	Renormalization scheme dependence	152
	Effective α in QED	153
	Gauge dependence of the β-function	154
	Problems	156
7	**Scale invariance and operator product expansion**	157
7.1	Scale invariance	157
	Scale transformations	157
	Dilatation current	159
	Conformal transformations	161
7.2	Broken scale invariance	163
	General discussion	163
	Anomalous breaking of scale invariance	164
7.3	Dimensional transmutation	168
7.4	Operator product expansion (OPE)	169
	Short distance expansion	169
	Light-cone expansion	173
7.5	The relevance of the light-cone	174
	Electron–positron annihilation	174
	Deep inelastic hadron leptoproduction	175
	Wilson coefficients and moments of the structure function	179
7.6	Renormalization group and OPE	181
	Renormalization of composite operators	181
	RGE for Wilson coefficients	183
	OPE beyond perturbation theory	185
	Problems	185
8	**Quantum chromodynamics**	188
8.1	General introduction	188

	Renormalization and BRS invariance; counterterms	188
	Asymptotic freedom of QCD	190
	The Slavnov–Taylor identities	192
8.2	The background field method	194
8.3	The structure of the vacuum in non-abelian gauge theories	196
	Homotopy classes and topological vacua	196
	Physical vacuum	199
	Θ-vacuum and the functional integral formalism	201
8.4	Perturbative QCD and hard collisions	204
	Parton picture	204
	Factorization theorem	205
8.5	Deep inelastic electron–nucleon scattering in first order QCD (Feynman gauge)	206
	Structure functions and Born approximation	206
	Deep inelastic quark structure functions in the first order in the strong coupling constant	211
	Final result for the quark structure functions	216
	Hadron structure functions; probabilistic interpretation	217
8.6	Light-cone variables, light-like gauge	219
8.7	Beyond the one-loop approximation	224
	Comments on the IR problem in QCD	226
	Problems	227
9	**Chiral symmetry; spontaneous symmetry breaking**	229
9.1	Chiral symmetry of the QCD lagrangian	229
9.2	Hypothesis of spontaneous chiral symmetry breaking in strong interactions	232
9.3	Phenomenological chirally symmetric model of the strong interactions (σ-model)	235
9.4	Goldstone bosons as eigenvectors of the mass matrix and poles of Green's functions in theories with elementary scalars	238
	Goldstone bosons as eigenvectors of the mass matrix	238
	General proof of Goldstone's theorem	241
9.5	Patterns of spontaneous symmetry breaking	243
9.6	Goldstone bosons in QCD	248
10	**Spontaneous and explicit global symmetry breaking**	252
10.1	Internal symmetries and Ward identities	252
	Preliminaries	252
	Ward identities from the path integral	254
	Comparison with the operator language	256
	Ward identities and short distance singularities of the operator products	258
	Renormalization of currents	260
10.2	Quark masses and chiral perturbation theory	262
	Simple approach	262
	Approach based on use of the Ward identity	263
10.3	Dashen's theorems	265
	Formulation of Dashen's theorems	265
	Dashen's conditions and global symmetry broken by weak gauge interactions	266

10.4	Electromagnetic $\pi^+-\pi^0$ mass difference and spectral function sum rules	270
	Electromagnetic $\pi^+-\pi^0$ mass difference from Dashen's formula	270
	Spectral function sum rules	271
	Results	273
11	**Spontaneous breaking of gauge symmetry**	276
11.1	Higgs mechanism	276
11.2	Spontaneous gauge symmetry breaking by radiative corrections	280
11.3	Dynamical breaking of gauge symmetries and vacuum alignment	285
	Dynamical breaking of gauge symmetry	285
	Examples	288
	Problems	293
12	**Chiral anomalies**	295
12.1	Triangle diagram and different renormalization conditions	295
	Introduction	295
	Calculation of the triangle amplitude	297
	Different renormalization constraints for the triangle amplitude	301
	Important comments	303
12.2	Some physical consequences of the chiral anomalies	306
	Chiral invariance in spinor electrodynamics	306
	$\pi^0 \to 2\gamma$	307
	Chiral anomaly for the axial $U(1)$ current in QCD; $U_A(1)$ problem	309
	Anomaly cancellation in the $SU(2) \times U(1)$ electroweak theory	311
	Anomaly free models	314
12.3	Anomalies and the path integral	314
	Introduction	314
	Abelian anomaly	316
	Non-abelian anomaly and gauge invariance	316
	Consistent and covariant anomaly	320
12.4	Anomalies from the path integral in Euclidean space	321
	Introduction	321
	Abelian anomaly	323
	Non-abelian anomaly	325
	Problems	327
13	**Effective lagrangians**	329
13.1	Non-linear realization of the symmetry group	329
	Non-linear σ-model	329
	Effective lagrangian in the $\xi_a(x)$ basis	333
	Matrix representation for Goldstone boson fields	336
13.2	Effective lagrangians and anomalies	338
	Abelian anomaly	338
	The Wess–Zumino term	339
	Problems	341
14	**Introduction to supersymmetry**	342
14.1	Introduction	342
14.2	The supersymmetry algebra	343

14.3	Simple consequences of the supersymmetry algebra	346
14.4	Superspace and superfields for $N = 1$ supersymmetry	348
	Superspace	348
	Superfields	351
14.5	Supersymmetric lagrangian; Wess–Zumino model	353
14.6	Supergraphs and the non-renormalization theorem	356
	Appendix A: Feynman rules and Feynman integrals	363
	Feynman rules for the $\lambda\Phi^4$ theory	363
	Feynman rules for QED	364
	Feynman rules for QCD	365
	Dirac algebra in n dimensions	366
	Feynman parameters	367
	Feynman integrals in n dimensions	367
	Gaussian integrals	368
	λ-parameter integrals	368
	Feynman integrals in light-like gauge $nA = 0$, $n^2 = 0$	368
	Convention for the logarithm	369
	Spence functions	370
	Appendix B: Elements of group theory	371
	Definitions	371
	Transformation of operators	372
	Complex and real representations	373
	Traces	374
	σ-model	375
	Appendix C: Chiral, Weyl and Majorana spinors	377
	Definitions	377
	Lorentz transformation properties of Weyl spinors	379
	Free particle solutions of the massless Dirac equation	383
	References	385
	Index	391
