## **Voorwoord**

Dit proefschrift is het resultaat van ruim 5 jaar onderzoek in het milieu-biotechnologie laboratorium van Prof. Dr. Dick B. Janssen. Het was een leerzame periode. Ik heb in die tijd met veel mensen samengewerkt en wil daarom iedereen bedanken die op één of andere manier heeft bijgedragen aan de totstandkoming van dit proefschrift.

Tiendeveen, maart 2001

## Contents

9	Chapter 1	General introduction: The evolution of degradative pathways for xenobiotic halogenated aliphatic compounds
37	Chapter 2	Degradation of 1,3-dichloropropene by <i>Pseudomonas cichorii</i> 170
55	Chapter 3	Degradation of 1,2-dibromoethane by <i>Mycobacterium</i> sp. strain GP1
77	Chapter 4	Roles of horizontal gene transfer and gene integration in evolution of 1,3-dichloropropene- and 1,2-dibromoethane-degradative pathways
97	Chapter 5	Haloalkane-utilizing <i>Rhodococcus</i> strains isolated from geographically distinct locations possess a highly conserved gene cluster encoding haloalkane catabolism
115	Chapter 6	The <i>trans</i> -3-chloroacrylic acid dehalogenase from <i>Pseudomonas cichorii</i> 170 shares structural and mechanistic similarities with 4-oxalocrotonate tautomerase
137	Chapter 7	Summary and concluding remarks
153		Samenvatting
157		List of publications
