CONTENTS

CHAPTER 1. INTRODUCTION TO LIQUID CRYSTAL BIOMEMBRANES	1
1.1. Liquid Crystals	1
1.1.1. Mysterious Matter	1
1.1.2. Orientational Order	3
1.1.3. Classification of Thermotropics	4
1.1.4. Classification of Lytropics	7
1.2. Amphiphiles and Lyotropic Liquid Crystals	8
1.2.1. Amphiphile	8
1.2.2. Monolayer	10
1.2.3. Micelle	11
1.2.4. Phase Diagram	12
1.3. Phase Transitions in Biomembranes	13
1.3.1. Fluid Mosaic Model	13
1.3.2. Lipid Bilayer	14
1.3.3. Phase Transitions in Bilayer	15
1.3.4. Classification of Lipid Bilayer Phase	17
1.4. Simple Biochemistry of LC Biomembranes	19
1.4.1. Effect of Chain Length	19
1.4.2. Double Bond Effect	20
1.4.3. Effect of Ionic Condition	21
1.4.4. Cholesterol Effect	22
1.4.5. Complexity in Biomembrane	23
1.5. Artificial Bilayers and Vesicles	24
1.5.1. Lipids for Artificial Vesicles	24
1.5.2. Multilamellar Vesicles	24
1.5.3. Single-Bilayered Vesicles	25
References	26

CHAPTER 2. CURVATURE ELASTICITY THEORY OF FLUID MEMBRANES	29
2.1. Shape Problem in Red Blood Cell	29
2.1.1. Membranes in Cell	29
2.1.2. High Deformability of Cell Membranes	31
2.1.3. Difficulty in the Explanation of Discocyte Shape	32
2.2. Differential Geometry of Surface	33
2.2.1. Lipid-Bilayer Vesicle Viewed as a Closed Surface	33
2.2.2. Space Curve	33
2.2.3. Surface and Parametric Curves	35
2.2.4. First Fundamental Form	36
2.2.5. Area	38
2.2.6. The Normal and the Tangent Plane	39
2.2.7. Second Fundamental Form	39
2.2.8. Christoffel Symbols	40
2.2.9. Curves and Directions on a Surface	41
2.2.10. Normal Curvature of a Curve on a Surface	42
2.2.11. Principal Directions, Line of Curvature and Principal Curvatures	44
2.2.12. The Mean Curvature and the Gaussian Curvature	44
2.3. Differential Invariants on a Surface	47
2.3.1. Gradient of a Scalar Field	47
2.3.2. Divergence of a Vector Field	49
2.3.3. Laplace-Beltrami Operator on a Scalar Function	50
2.3.4. Two-Dimensional Curl of a Vector	50
2.3.5. Other Differential Invariants	51
2.4. Curvature Elasticity of Fluid Membranes in Liquid Crystal Phase	52
2.4.1. Fluid Membranes Viewed as Liquid Crystals	52
2.4.2. Helfrich's Approach	53
2.4.3. A Derivation by Way of 2D Differential Invariants	57
2.4.4. The Spontaneous Curvature Viewed from Landau-de Gennes Theory	61
2.4.5. Discussion of Helfrich Bending Energy on Liquid Crystal Point of View	64

2.4.6. Spontaneous Curvature and Flexoelectric Effect	66
References	68
CHAPTER 3. GENERAL VESICLE SHAPE EQUATION OF HELFRICH, SPONTANEOUS CURVATURE THEORY	71
3.1. Mathematical Preliminary	71
3.2. General Shape Equation	82
3.3. Spherical Vesicles	86
3.4. Circular Cylindrical Vesicles	90
3.5. Third Order Energy Variation	92
References	96
CHAPTER 4. SOLUTIONS OF GENERAL SHAPE EQUATION	97
4.1. Clifford Torus	97
4.2. Dupin Cyclide	104
4.3. Circular Biconcave Discoid	110
4.4. Surfaces of Revolution with Constant Mean Curvature and Extended Surfaces	114
4.5. Noncircular Cylindrical Surfaces	120
4.6. Euler-Lagrange Shape Equations for Axisymmetric Vesicles	142
4.7. Instability and Periodic Deformation in Bilayer Membranes	152
4.8. Numerical Observation of Nonaxisymmetric Vesicles	159
4.8.1. Model, Software, and the Procedure	160
4.8.2. Main Results	163
4.8.3. Discussion	170
References	170
CHAPTER 5. THEORY OF TILTED CHIRAL LIPID BILAYERS	175
5.1. Free Energy Expression for TCLB with Strong Chirality	175
5.2. Tilt-Equilibrium and Surface-Equilibrium Equations in Case of Strong Chiral Effect	179

5.3. The Wound Ribbon Helix	182
5.4. The Twisted Strip Helix	188
5.5. Spherical Vesicle	193
5.6. General Formula of Free Energy of TCLB	196
5.7. The Effect of Other Elastic Constants	201
5.8. High- and Low-Pitch Helical Structures of TCLBs	204
References	211
APPENDIX	215
I. Tensor Calculus	215
II. The Gradient Operator	220
