Contents

Preface

1. CONTROL PROCESSES. OPTIMAL CONTROL PROBLEM	1
1.1 Preliminary Description of the Problem	1
1.2 Controlled Processes	3
1.3 Optimal Control of Ordinary Process. Problem Statement and Some Applications	5
1.4 Optimal Control of Multistage Processes	15
1.5 Optimal Control of Multiargument Processes. Problem Statement and Some Applications	16
Commentary and Bibliography	18
References	18
2. BOUNDING AND SOLVING FUNCTIONS. SUFFICIENT CONDITIONS OF OPTIMALITY	21
2.1 Some Preliminary Theses. Extension Principle	21
2.2 Principle of Decomposition with Respect to Time	23
2.3 Equivalent Representations	25
2.4 Direct Application of Equivalent Representations of Some Optimal Control Problems	28
	xi

2.5	Global Bounds	35
2.6	Sufficient Optimality Conditions	43
2.7	Sufficient Optimality Conditions. Nonfixed Boundary State	47
2.8	Control Synthesis	49
2.9	Estimations of Achievability Regions. Strengthened Lower Bounds and Sufficient Optimality Conditions	50
2.10	Principle of Optimality	52
	Commentary and Bibliography	54
	References	58
3.	SOME SPECIAL OPTIMAL CONTROL PROBLEMS. DIRECT APPLICATION OF THE SUFFICIENT OPTIMALITY CONDITIONS	61
3.1	Some Generalizations of the Degenerate Euler's Problem	62
3.2	Simplest Macromodel of Optimal Economic Development	71
3.3	Two-Dimensional Autonomous Problem Linear with Respect to Control	81
3.4	Optimal Control for Vertical Maneuvers of Aircraft	90
3.5	Multidimensional Degenerate Problem	111
3.6	Applied Physics Problem: Maximization of Atomic Excitement by Resonance Field	117
	Commentary and Bibliography	121
	References	128
4.	SUFFICIENT OPTIMALITY CONDITIONS AND BASIC EQUATIONS OF THE VARIATIONAL CALCULUS AND OPTIMAL CONTROL THEORY	133
4.1	Some Useful Formulas	133
4.2	Sufficient Optimality Conditions and Maximum Principle	134
4.3	General Boundary Conditions	138
4.4	Absolute Minimum Problem in Lagrange's Method	139
4.5	Optimal Control for Linear Systems	141
4.6	Strong Local Minimum	146
4.7	Local Minimum Conditions for Euler's Problem of Variational Calculus	149
4.8	Principle of Least Action	154
4.9	Second-Order Conditions for Degenerate Problems	157
4.10	Processes with Discrete Argument	160
4.11	Multiargument Systems	168
	Commentary and Bibliography	177
	References	178

5. OPTIMAL FEEDBACK POLICY. HAMILTON–JACOBI METHOD	181
5.1 Equations for Optimal Control Synthesis	184
5.2 Algorithmic Features of the Method	188
5.3 Synthesis of Controllers for Linear Systems with a Quadratic Criterion	189
5.4 Approximate Optimal Synthesis	194
5.5 Descent of Spacecraft into Atmosphere Using the Engine: Approximate Optimal Control Synthesis	201
5.6 Approximate Optimal Controllers for Linear Systems with Restricted Control	207
5.7 Analytical Synthesis of Optimal Control for Nonlinear Systems	219
Commentary and Bibliography	234
References	234
6. COMPUTER METHODS FOR SUCCESSIVE IMPROVEMENTS IN A CONTROL PROGRAM	237
6.1 Infinitesimal Methods of Control Improvement	239
6.2 Global Methods of Successive Improvements of Control	242
6.3 Control of Observation Process	249
6.4 Some Special Problems	252
6.5 Optimal Control of Quantum Systems by Laser Radiation	253
6.6 Knapsack Multivariate Problem	259
6.7 Comparative Discussion of the Iterative Methods	261
References	262
7. DUAL COMPUTATIONAL ALGORITHMS FOR SOLVING AND OPTIMIZING CONTROLLABLE SYSTEMS OF EQUATIONS	265
7.1 Problem Statement. Basic Idea of the Method	265
7.2 Method of Improvement	269
7.3 Methods of Realization of an Elementary Operation	273
7.4 Convergence	277
7.5 Examples	281
Appendix: Some Auxiliary Results	287
Commentary and Bibliography	291
References	291
